# NUESTRO APELLIDO URIBE

Por María Emma Escovar Uribe

Como los niños que coleccionan cromos, los mayores coleccionamos historias, vivencias que nos llevan al pasado, al recuerdo. A veces, entre esas historias de nuestro pasado, encontramos algunas que nos eran desconocidas pero que unos abuelos muy antiguos y lejanos habían dejado escritas para nosotros, para sus nietos del futuro, como un puente a través de los siglos, para contarnos quienes eran ellos, como eran sus nombres, sus casas, sus costumbres, la tierra en la que vivían.

Eso es lo que hicieron los abuelos Uribe: enviarnos a través de unos testamentos y unas partidas sacramentales, , ese mensaje de siglos.

La palabra Uribe viene de dos palabras en lengua vasca: Uri: pueblo, villa; y Be: suelo, parte baja. Se debió referir en su momento a la parte baja de una villa, pero buscar su significado primitivo es, como dice al antropólogo vasco Michelena, buscar “la sombra de una sombra”.

Los antepasados de nuestro primer Uribe: Martín de Uribe Echavarría, vivían la Anteiglesia de Larrino, una de las 18 aldeas que formaban la "comunidad de valle" que era el Valle Real de Léniz, en Guipúzcoa. Allí nos aparece hacia 1.505 un Martín Sáenz de Uribe, al que sigue su hijo Pedro, todos llamados Sáenz de Uribe, indicativo de que esta rama de la familia Uribe tuvo su origen en un Sancho. Este primer Pedro Sáenz de Uribe ya ha muerto en 1.561, porque de esa fecha es la primera anotación del libro de difuntos de Larrino, donde se les recuerda a los descendientes de Pedro que deben a la parroquia dos cabos de año y lo que su padre legó en el testamento a la parroquia.

Los Uribe no eran gente especial. No eran grandes nobles ni ricos hacendados. Eran unos pequeños hidalgos, agricultores dependientes de la autoridad de los condes de Oñate. Hombres que labraban la tierra, cuidaban sus vacas y rezaban a San Cristóbal y a las Vírgenes de los santuarios de los pueblos vecinos. Casaban a sus hijos lo mejor que podían, pagaban sus deudas y se hacían enterrar en la iglesia del pueblo.

Al primer Pedro Sáez de Uribe le siguen otros dos de su mismo nombre. Del segundo se conserva el testamento, redactado en 1.568. En él nos habla de lo cotidiano de su vida: de su religiosidad, de su trabajo , de sus deudas, de su mujer y de sus hijos, de su responsabilidad para con sus hermanos como cabeza de familia que era. Deja, como era habitual, el caserío de Uribe a su hijo, el tercer Pedro Sáenz de Uribe.

Este tercer Pedro será con el tiempo el padre de Francisco de Uribe, nacido en Larrino en 1.588. Francisco no es el heredero. Ni siquiera el segundo hijo, pero su padre arregla para él un matrimonio ventajoso, con la única hija de un hombre de la aldea vecina: María Pérez de Echavarría. Así nuestra rama de Uribe pasa a la aldea de la esposa: la anteiglesia de Bedoña. Allí vemos a Francisco en su testamento, ya viudo e instalado en el caserío de Echavarría, el que fue de su mujer. Allí había nacido en 1.613, Juan, el hijo mayor de Francisco y María, y allí nacerá también el hijo de Juan: nuestro Martín, en 1.656.

Ha llegado hasta nosotros el testamento de este Juan de Uribe, redactado en 1.664, donde aparecen muchos detalles de la vida cotidiana de la familia, pero para mí el más conmovedor es el de este padre, a punto de morir, que deja ordenado que a su hijo Martín de 8 años y a su hermano Pablo, que es más pequeño, les "den escuela" hasta que aprendan a leer y a escribir, detalle que encuentro por primera vez en un testamento de esta época.

De Martín no sabemos nada más hasta 1.671, cuando, con 15 años solicita en su pueblo una copia de su partida de bautismo. Ese es el pasaporte, la señal de partida. No sabemos nada de su vida hasta que volvemos a encontrarlo en Sevilla en 1.684, desde donde solicita a su hermano unos documentos familiares.

Después...a buscarse la vida...y a América...Nuestro Martín buscó, como tantos, otros cielos y otros mundos, donde todo estaba por hacer y donde se podía crear una nueva patria y una nueva familia. Y a fe que Martín lo logró. Ya en octubre de 1.685 está en Medellín, donde contrae matrimonio con Ana López de Restrepo, el 15 de octubre de 1.685. Ana era hija de Marcos López de Restrepo y de Magdalena Guerra Peláez. La pareja tuvo 5 hijos: tres hombres y dos mujeres. De ellos descendemos todos los Uribe de Antioquia, que llevamos con orgullo por el mundo el nombre que Martín nos legó.

Notes for Juan Jaramillo de Andrade:
El Capitin Dn. Juan Xaramillo vivió en el valle de Medellkn y tuvo sus rancherkas en la tierra de su propiedad, que ocupaba el sitio donde esti hoy el pueblo de Itagük. Allk tenka su casa de habitación y los ranchos donde vivkan sus esclavos. Él fue quien puso los primeros fundamentos para el pueblo de Itagük. Su casa fue el rancho alrededor del cual se hicieron otras, que al fin formaron el pueblo.
Fue propietario de los salados de Guaca (Heliconia) y gran parte de las tierras que la rodean. Esa propiedad la adquirió por remate que hizo de sus terrenos, los cuales fueron considerados como mostrenco, por el abandono que de ellos hizo su primer propietario Dn. Simón de Murga. Don Simón de Murga trabajó los salados y los crónicos refieren respecto a él lo siguiente: " En tiempo de la conquista, llevaron los espanoles a Espana una indiecita de estas tierras de Antioquia, -- esa indiecita fue adquirida por la familia de Murga - y en esa casa fue educada y empleada como encargada de cuidar los ninos - la india cuidó

desde que era nino a Simón de Murga.- Siendo este ya hombre y estando la india muy vieja y próxima a morir, lo llamó y le dijo lo siguiente: "Vaya a mi tierra y averigüe dónde queda el valle de Aburri, fkjese allk y observe el punto por donde se pone el sol en los meses de junio y julio, siga esa dirección y llegari a un punto que se llama Guaca, situada en una canada, en ese lugar encontrari tres tesoros como piedras de fogón, el uno es una fuente de agua muy rica, el otro el tesoro de un cacique que tuvo mucho oro, y el tercero es el Tesoro de toda la tribu, que fue enterrado cuando fueron los espanoles, habiendo gastado los indios trece lunas para guardarlo". Simón de Murga vino a la provincia de Antioquia, siguió las indicaciones de la india - y adquirió la propiedad de los terrenos de Guaca - y allk se dedicó a buscar los Tesoros.- (el oro era el gran atractivo de los espanoles). Habiendo gastado tiempo y dinero en buscar el oro y estando sin ilusiones de hallarlo, resolvió trabajar la salina.- Montó ésta y como producka mucha sal y de muy buena calidad, su riqueza se aumentó considerablemente y pudo comprar esclavos y animales para el servicio de la salina. Un dka se hundió uno de los bueyes de trabajo, y al sacarlo del hueco donde estaba, Murga comprendió que allk estaba una sepultura de indio, la hizo excavar y se encontró el Tesoro del cacique rico. Al verse ya acaudalado, porque en la sepultura sacó mucho oro y la salina también se la habka producido, resolvió volverse para Espana con sus riquezas. Realizó sus bienes empacó su oro, lo puso sobre sus bueyes de carga, y emprendió viaje para su tierra. En el pueblo de Guaca puso el oro en siete cargas, y con ellas cargó siete bueyes.

En un descanso de la subida, y antes de llegar al alto de Maldonado, se cansó o se mató uno de los bueyes. Este contratiempo no lo detuvo, enterró en el monte a un lado del camino la carga de oro y siguió su viaje hacia Cartagena de Indias. En este puerto se embarcó en uno de los galeones que segukan para Espana. Algunos dicen que el galeón fue apresado por los piratas, matando a Murga y robindole el oro. Otros dicen que sk llegó a Espana y que allk gozó su riqueza. Lo cierto es que no volvió a América y que la carga de oro se quedó enterrada. Muchas personas la han buscado, pero nadie la ha encontrado".

Esto que antecede lo referka Dn. Angel M. Alvarez, uno de los mayores accionistas en la salina de Guaca - propiedad que heredó de sus mayores, quienes la compraron al Capitin Dn. Juan Xaramillo de Andrade.

El Capitin Dn. Juan Xaramillo de Andrade contribuyó a aumentar la riqueza psblica de Antioquia con el trabajo de las minas de oro.- El fue de los primeros que explotaron los ricos minerales de Anork, situados en el distrito de Santa Rosa de Osos.

La fundación de la ciudad de Medellkn, Capital del Departamento de Antioquia tuvo lugar el 2 de noviembre de 1675, ese dka fue promulgada la Real Cédula expedida por Dona Marka Ana de Austria, por el Gobernador Don Miguel de Aguinaga.- La formación del Cabildo para el Gobierno municipal de la Villa de Medellkn, tuvo lugar el 17 del mismo mes.- y la erección definitiva de la Villa bajo la Santa advocación de la Virgen de La Candelaria y de San Juan Bautista, se verificó el dka 24 del mismo mes y ano.

Dona Marka Ana de Austria por muerte del Rey Dn. Felipe IV, y en la menor edad del que fue el Rey Dn. Carlos II, con un consejo de Regencia, manejaba a la sazón los destinos de la Monarquka espanola. Después de muchas vacilaciones, se acudió a la humilde petición que hicieran los vecinos de este

valle, y la Regencia expidió la Real Cédula de fundación, y como don Francisco Portocarreno y Luna, Conde de Medellkn en Extramadura su Presidente del Consejo, para honrar su nombre y el nombre del lugar de nacimiento, se dispuso que la nueva población llevara en adelante el nombre de "La Villa de Medellkn". Cumplidas convenientemente todas las formulas del caso, a la usanza espanola quedó definitivamente erigida la villa, en el ano y dka ya mencionados.

Juan Jaramillo de Andrade, nació en la ciudad de Antioquia y fue bautizado e1 25 de julio de 1611. Prestó, como su padre, muy valiosos servicios en defensa de la ciudad contra las agresiones de los indios. En 1684, donó sus bienes a sus hijos y se fue a Bogoti a entrar a un convento.

Notes for Juan Jaramillo de Andrade y Salcedo:

(182) JARAMILLO

DON JUAN JARAMILLO DE ANDRADE, fue el fundador de la extensa familia del mismo apellido, pues aunque vinieron con él varios otros espanoles, sólo de éste quedó sucesión bien conocida. Segsn largas e interesantes probanzas levantadas por la familia de don Alonso Jaramillo de Andrade, se tienen los siguientes datos:

Nació don Juan Jaramillo en la villa de Granada, pequena población de la provincia de Zafra en Extremadura, en el sltimo tercio del siglo XVI, del matrimonio de don Alonso Jaramillo de Andrade y de dona Isabel Fernindez de Toledo. Fue bautizado el 5 de febrero de 1579.

Era don Alonso Jaramillo, personaje de relevantes méritos, merced a los cuales obtuvo real cédula de nobleza e hidalguka. En tal documento se hace recuento muy interesante de sus antepasados, como también de sus servicios a la Corona de Espana.

El mis antiguo de la relación fue don Francisco Jaramillo, casado con dona Isabel del Prado. De éstos nació don Alonso Jaramillo, el cual casó con dona Teresa Sinchez y de éstos provino otro don Francisco Jaramillo, quien de su enlace con dona Constanza Hernindez, dejó por su legitimo hijo al expresado don Alonso Jaramillo de Andrade, padre de nuestro don Juan.

Vino éste a la.provincia de Antioquia en los primeros anos del siglo XVII, después de haber servido cerca de diez anos en la [494] armada que al mando de don Luis Fajardo, fue enviada de Espana a la defensa de Cartagena de Indias.

Muy joven, ingresó don Juan a la Real Armada, y despues de servir algsn tiempo, pasó a América con los galeones que cada ano hackan este viaje, al mando del General don Luis Fajardo, y arribó a Cartagena el 17 de agosto de 1598.

Al parecer, con algunos ahorros que traka, y con la liquidación de su paga de soldado, se dirigió a la ciudad de Remedios, y allk hizo alguna compania de minas. Luego sabiendo que tenka parientes y muy ricos, en Santafé de

Antioquia, buscó a don Garcka Jaramillo de Andrade, primo de su padre, acaudalado minero y hacendado, quien estaba casado con dona Maria Centeno, hija del Capitin Fernando de Zafra Centeno y de dona Juana Taborda, pertenecientes quizis a la familia mas importante de Santafé de Antioquia. La hermana menor de dona Marka, llamada dona Juana, estaba soltera, y su estado obedecka a que no habka aparecido mozo de suficiente alcurnia y condiciones que la desposara. Entonces se concertó la boda de dona Juana con don Juan, de menor edad que ella,
en septiembre del ano de 1600.

De la real ejecutoria de hidalguka y del pleito que la precedió (ver nota en don Alonso Jaramillo de Andrade), existen originales en el archivo de la Real Cancillerka de Granada, y copia completa de ella en el Archivo Histórico Nacional Sección Colonia, Fondo Genealorgias, y en el Archivo Histórico de Antioquia, en el fondo Nobleza. Esos documentos que son a los que se refiere Arango Mejka, sirvieron de base para que la Asociación de Hidalgos a Fuero de Espana, presidida por su Alteza Real don Carlos de Borbón, duque de Calabria, en su sesión de 7 de julio de 1989 Expediente 5108, reconociera la hidalguka de don Alonso Jaramillo de Andrade, y de sus descendientes directos por linea de varón, en Colombia.

Notes for Alonso Jaramillo de Andrade:

Don Alonso Jaramillo de Andrade, habka nacido en la villa de Zafra, Extremadura, y casó en primeras nupcias con dona Isabel de Luna, en la vecina población de los Santos de Maimona, situada a menos de diez minutos de camino de aquella, donde se radicó. Allk, seguramente por aquellas pendencias regionales entre poblaciones vecinas, de comsn ocurrencia en todo el mundo, le fue negado por el Cabildo, su reconocimiento como hidalgo, categorka en que eran tenidos todos los de su familia en Zafra desde tiempo inmemorial y fue obligado, como cualquier parroquiano a pagar impuestos, de los cuales estaban exentos los hidalgos.

Indignado don Alonso, demandó al Cabildo de los Santos de Maimona ante la Real Cancillerka de Granada, para obligarlo a respetarle su status, pleito que se demoró diez anos, y que terminó con real ejecutoria de hidalguka fechada el 11 de febrero de 1580. Con ella se presentó ante el Cabildo de los Santos de Maimona donde fue obedecida por dicho cuerpo que tuvo ademis, que devolver los impuestos pagados.

Entretanto habka muerto su mujer, después de tener varios hijos, de los cuales quedó descendencia en algunos pueblos de Extremadura. Ya viudo, y seguramente en uno de sus viajes a Granada para adelantar la tramitación de su pleito, conoció a dona Isabel de Toledo y Salcedo, con quien contrajo segundas nupcias. Obtuvo igualmente el tktulo de Escribano Real Psblico y del Cabildo de Montejkcar, a donde se trasladó a vivir. Fuera de don Juan, tuvo asimismo el matrimonio Jaramillo Salcedo y Toledo a don Francisco Jaramillo, nacido el 27 de febrero de 1580, y a dona Ana Jaramillo, nacida en 23 de abril de 1584, hija póstuma, pues don Alonso murió el 5 de noviembre de 1583.

Notes for Hernando de Zafra Centeno Fernindez:

CAPITAN DON HERNANDO DE ZAFRA CENTENO, fue uno de los primeros y mis valientes conquistadores de la provincia de Antioquia. Por los datos que se han podido allegar vino a estas tierras pocos anos después de la muerte de Robledo. Por su testamento hallado en Tunja por el erudito genealogista don José Marka Restrepo sabemos de su personalidad lo siguiente: "Que era natural de Badajóz, en Espana (no de ciudad Rodrigo como se creka) y que fueron sus padres Hernando de Zafra Centeno y dona Catarina Fernindez. Que guerreó en servicio de Su Mgtd. en Italia, Alemania, Hungrka y otras partes; que por los anos de 1548 a 1549 salió de Espana y desembarcó en Pernambuco, Brasil. Que estuvo en la Isla de Margarita y después en Cumani, las que ayudó a defender de los corsarios franceses y contra los caribes; se halló en el descubrimiento del Amazonas. Fue companero de Gómez Hernindez cuando a éste se le encomendó la reedificación de Antioquia. Regresó a Santafé de Bogoti, de donde en unión de Asencio Salinas vino a la conquista de Victoria y de allk pasó a Remedios y por sitimo vino a sentar sus reales en Santafé de Antioquia, en donde casó por los anos de 1563 con dona Juana Taborda, viuda de Francisco Moreno de León, a quien dio muerte

Gaspar de Rodas en un duelo". Era esta dama hija del capitin Juan Taborda (el viejo) (360). Se ignora el nombre de su madre, pero se cree era espanola. Desempenó el capitin Zafra Centeno en Santafé varios empleos, entre otros el de alcalde, regidor, teniente de gobernador y justicia mayor. En 1571 se trasladó a Tunja con su familia en donde murió pocos anos después. Después de su muerte su viuda volvió a contraer nuevas nupcias con Damiin de Sila, portugés con el que regresó a la ciudad de Antioquia.

Solo se dice que dejaron tres hijas, que fueron:

1.- Dona Marka Centeno, la famosa minera casada tres veces; primero con Alonso de Rodas Carvajal hijo de don Gaspar de Rodas (bastardo) de que parece se divorció después. En segundas casó con el espanol Garcka Jaramillo y en terceras con don Fernando de Ossio y Salazar. De ninguno dejó descendencia. Murió dona Marka el 4 de agosto de 1645. Se dijo también que habka sido esposa de don Antonio Machado, pero parece que no fue casada con él, sino que tuvo algunas relaciones, lo que ocasionó el pleito de divorcio con Alonso de Rodas.
2.- Dona Juana de Zafra Centeno, esposa del capitin don Juan Jaramillo de Andrade (182).
3.- Dona Catalina, esposa del capitin Andrés Parias.

Un nieto del capitin Zafra, hijo del capitin Juan Faramillo, tomó, haciendo uso del real privilegio de familia, el nombre de Hernando o Fernando de Zafra del cual quedó numerosa familia.

iv. María de Urnieta Lezcano, born Abt. 1590 in Antioquia; married Fancisco Martínez Vibancos; born 1565 in España.

Notes for Fancisco Martínez Vibancos:
CAPITAN FRANCISCO MARTINEZ VIBANCOS, Encomendero, Alcalde Ordinario 1607, 1610, 1611, 1612, 1614. Teniente de Tesorero interino en 1608.
Nació el 1565. Aparece de 17 años en l582 como residente de Santafé de Alltioquia y se encuentra en la partición de la encomienda de Francisco López de la Rua y Juan Daza y como fiador cuando meten a la cárcel a Lucas de Espinosa.

En 1583 se ve implicado en la acusación que le hizo Francisca Rúiz y Gaspar de Luyando a Damiál1 de Silva por ser jugadores ventajosos.

Fue Teniente de Tesorero por 1608 y Acalde Ordinario por los años de 1607, 1610, 1611,1612 y 1614.

Encomienda

TITULO.

Le fue dada la encomienda de Francisco de Zabala:

El Gobernador don Bartolomé de Alarcón por fallecimiento del Capitán Francisco de Zabala decretó la vacancia de las enicomiendas de Nocoscos, Nibaes y Taytaes. Mandó luego pregonar que se presentaran los beneméritos que se creyeran con mejor derecho y pasado un año no se presentó mas que el capitá Francisco Martínez a 7 de Diciembre de 1612, alegando los méritos de su suegro (capitán Miguel de Urnieta Lizcano) y del abuelo (Juan Taborda "el mozo" ) de su señora doña María de Saldundique. En Abril de 1613 se le hizo merced, con el cargo de pagar 1.000 pesos para repartirlo entre gente benemérita pobre y la obligación adicional de tener en su casa a doña Leonor Taborda madre del capitán Francisco de Zabala, tia de su mujer y sustentarla por los días de su vida de comer y vestir, conforme al estado de viudez.

Parece que antes de casarse tuvo un hijo llamado Hernán Martín, mulato, y esto se conoce por declaraciones de testigos en un pleito que éste tuvo por pagarle a una india, por lo cual fue desterrado de Antioquia. Sinembargo, el capitán Francisco Martínez dice que "Fernandillo" no es su hijo.

Con doña María Sánchez de Torreblanca tuvo otro hijo natural, llamado Bartolomé Sánche z Vibanco.

Casó con doña María de Saldundique, hija de Miguel de Urnieta y Ana Taborda. De este Matrimonio solo se sabe que tuvo:

1.- Miguel Martinez Vibancos. Nació en 1616. Casó con doña Jerónima de los Santos Vásquez Guadramiros, hija de Martín Vásquez Guadramlros y de doña Jerónima de Espinosa Cortés. Sin descendencia.

2.- Gregoria Jerónima Martinez Vibanco, nacida en 1614, casada con el capitan Domingo Rodríguez Manzano, natural de las Montañas de Burgos, en España.

No sabemos cuando murió Francisco Martínez Vibanco, pero su hijo Miguel Martínez Vibanco aparece como encomendero en 1621.

Notes for Juan de Toro:
CAPITAN JUAN DE TORO. Fue el fundador, de la extensa familia de su apellido que hay en Colombia. Perteneció al grupo de los primeros conquistadores y colonizadores del Nuevo Reino de Granada. Dice el genealogista Florez de Ociriz lo siguiente: "El capitin Juan de Toro pasó de Espana a Indias por los anos de 1567; fue de los pacificadores de la provincia de Guali y Guasquia y el Adelantado Jiménez de Quesada lo envió como

caudillo de gentes contra los indios mis belicosos. que fueron castigados y redujo los de Hervé, ocupindose mis de cinco anos en estas campanas". Por los anos de 1590 1592 pasó por orden del Presidente don Antonio Gonzilez, con una expedición, a los Remedios, a castigar a los negros que se hallaban alzados y redujo a obediencia a los indios de la Cimitarra.

Mudó la población de Remedios a mejor sitio. Fue teniente de gobernador y alcalde ordinario de Remedios varias veces.

Su información de nobleza dice ask: "En la villa de Villalba del Aleor, en nueve dkas del mes de diciembre de mil quinientos y setenta y ocho anos, ante el senor Alcalde Ordinario de esta villa, Francisco Fernindez de Tacallias, y en presencia de mi, Francisco de Mendoza, escribano psb]ico, pareció presente Alonso Francisco de Areos, vecino de esta villa e dijo: que JUAN de TORO, sobrino de Juana Bernal, su mujer, que lo tuvo y crió desde nino por fin y muerte de Cristóbal Servero, su padre legktimo que pasó a las Indias del Pers y esti residiendo en la ciudad de Mariquita del Nuevo Reino de Granada e otras partes, e al tiempo que se fue desta tierra no llevó información de su genealogka, limpieza y nobleza de padres e abuelos y ahora el dicho Juan de Toro la ha enviado a pedir; de como el dicho es hombre noble, cristiano viejo e limpio y descendiente de ellos, de padres abuelos e bisabuelos; y que no es de los que se prohiben pasar a Indias". Declararon los testigos presentados lo siguiente: Que Juan de Toro era hijo legktimo de don Cristóbal Servero y de dona Ana de Toro; nieto por paterna de Juan Servero e Isabel Bernal y por materna de Hernando de Toro e Inés Rodrkguez.

El capitin Juan de Toro, hizo levantar en Remedios en mayo de 598 una extensa información de sus méritos y servicios, en la que leclararon entre otros los capitanes Francisco Ruiz y Diego de Ospina.

Por tales documentos se sabe que contrajo matrimonio en Victoria con dona Inés de Carvajal, parienta cercana del conquistador don Diego de Carvajal, la que murió al dar a luz una nina, que se bautizó con el nombre de Damiana y fue mis tarde la esposa de don Antonio del Pino (279).

En segundas nupcias casó el capitin Juan de Toro en Remedios con dona Catalina Zapata de Cirdenas, hi]a del eapitin Luis Zapata de Cirdenas y de dona Mariana Valero (398).

Notes for Juan Garcka de Ordis:

El CAPITAN JUAN GARCIA DE ORDAS, natural del lugar de Rioseco de Tapia, diócesis de Oviedo, segsn consta de la extensa documentación que para pasar a Indias levantó en dicho lugar el ano de 1580, era hijo legktimo de Jorge Garcka y de Inés de Ordas, y nieto de Lorenzo Garcka y de Teresa Hernindez por paterna y de don Juan de Mancilla, y de Teresa de Ordis por materna.

Por ser interesante y servir ademis para conocer la cantidad de requisitos que se exigkan por parte de las autoridades reales a los que pretendkan pasar a las tierras de América, vamos a dar un extracto de la información levantada por Garcka de Ordis.

"En el lugar de Rioseco de Tapia, que es tierra del conde de Luna, Diócesis de Ontiedo, a 12 de octubre de 1588, pareció ante mk, Jorge Alvarez, teniente de Juez Ordinario, Juan Garcka de Ordis, hombre mozo, soltero, natural de dicho lugar y presentó un escrito de pedimento que dice ask: "Juan Garcka de Ordis digo, que tengo intentado, mediante Dios, de pasar a Indias, y para este efecto tengo necesidad de hacer probanza e información de como soy cristiano viejo, hijodalgo limpio de toda mala raza de moros, ni judkos, ni de los nuevamente convertidos, ni de los prohibidos por leyes de estos Reinos de pasar a aquellas partes de Indias".

Presenta diez testigos que contestan un largo interrogatorio, que ask comienza:

1.- "Que conocen a dicho Juan Garcka, como mozo soltero, mancebo libre, no casado, ni clérigo, ni fraile, ni sujeto a orden alguna. Que es hombre de buen cuerpo en medianka, redondo de en medianka, redodndo de rostro, poca barba y negra, y de dos lunares pardillos en la mejilla izquieda junto a las narices y otros cuatro o cinco mismas pequenos en la propia mejilla, hacia el alto de ella, y remate del ojo y una herida pequena en la ceja derecha y otra abajo de la
ceja".

Declaran luego sobre sus padres y abuelos, a quienes- conocen como hijosdalgos, cristianos, etc., etc.

A su turno el cura de la Rectoral de Santamarka, Diego de Santiago expone que "dio tres amonestaciones en tres dkas distintos, diciendo misa, al tiempo del ofertorio, y estando reunidos todos los vecinos hombres y mujeres, mozos e mozas, diciendo que el dicho Juan Garcka pretende pasar a Indias, que si sabkan que no era desposado ni casado ni clérigo, etc., y que si alguno sabka algo lo dijera so pena de excomunión".

??Jszguese si serka ficil salir de Espana en aquellos tiempos!! Y si, como piensan todavka muchos, los pobladores de nuestras montanas pudieran ser presidiarios, galeotos o renegados judkos sin Dios ni ley.

Obtenida la cédula real, logro al fin salir Juan Garcka de su patria, y a principios del ano de 1589 arribar a la villa de Santafé de Bogoti. Poco tiempo después contrajo matrimonio con dona Marina de Figueroa, nacida en Alanje, Espana, la cual habka venido con sus padres pocos anos antes. Eran éstos

don Martkn Alonso de Figueroa y dona Marka Cortés, hija ésta de Esteban Garcka y de Juana Blisquez.
Los hijos nacidos del matrimonio fueron:

1.- El capitin Felipe Garcka de Ordis, quien casó con dona Jerónima Paladines de la Fuente, hija de Alonso López Paladines y de dona Isabel Pérez Galeano (N° 197). De éstos nacieron Juan, Jacinto, Miguel y Nicolis de los cuales no se tiene noticia alguna y dona Gabriela Garcka de Ordis, que fue esposa de don Gregorio Alvarez del Pino (No 11).

2.- Dona Jacinta Garcka de Ordis, esposa que fue del capitin Doego Beltrin del Castillo (N° 40)

3.- Dona Marka Garcka de Ordis, esposa del cap—tin Fernando de Toro Zapata, rico minero y conquistador atrevido (No 369).

4.—Dona Gertrudis Garcka de Ordis, quien fue primera esposa de don Manuel Betancourt y Velasco, natural de las Islas Canarias (N° 47)

5.- Don Lorenzos que se ordenó. Fue cura y vicario de Antioquia muchos anos.

6.- Don Juan Garcka de Ordis, casado con dona Faustina Cipriana de Burgos Antolines, hija de don Agustkn de Burgos y de dona Andrea Ranjel de Mendoza (No 58).

Notes for Juan Taborda:
CAPITAN JUAN TABORDA, a quien llamaban los cronistas el Ilustre Capitan llegó a Antioquia con Robledo en el ano de 1545, o sea en el segundo viaje que hizo este valeroso conquistador. Sibese que era del Senorko de Vizcaya y pertenecka a familia de hijosdalgo notorios. Prestó grandes servicios en la colonización de Antioquia y fue eneomerdero de tribus indkgenas por muchos anos. En 1562 era regidor de la ciudad de Antioqua y fue teniente de gobernador por nombramiento que le hizo don Alvaro de Mendoza.

Trajo el capitin Taborda, de Espana un hijo varón llamado don Juan y dos hijas, que fueron:

1. Dona Juana Taborda, la cual fue casada en primeras nupcias con don Francisco Moreno de León, a quien dio muerte en un duelo al capitin Gaspar de Rodas. En segundas nupcias casó con el capitin espanol don Fernando de Zafra Centeno y muerto éste pasó a contraer terceras con Damiin de Sllva.

2. Dona Leonor, que fue esposa del capitan Juanes de Zabala, también espanol.

No nos ha sido posible dar con el nombre de la esposa del capitin Juan Taborda. Se tiene la creencia por varias declataciones de algunos de los contemporineos, entre ellos Sinchez Torreblanca, que vino con su esposo y los hijos de Espana. Otros piensan que pudo ser indkgena.

DON JUAN TABORDA, el hijo, contrajo matrimonio con doña Jerónima de Torres, nacida en Popayán. Dice una leyenda que fue traída desde aquella ciudad con una escolta de "más de doscientos soldados". Era hija del conquistador don Jerónimo de Torres, quien años después pasó a residir a la ciudad de Antioquia. Ignórase quien sería su esposa.

Consta que además de estos hijos legítimos dejó otros ilegítimos llamados Francisco, Alonso y Diego, quienes, al decir de sus contemporáneos, fueron muy valerosos y esforzados y prestaron al conquistador Rodas muy valiosos servicios.

De Juan Taborda y su esposa doña Jerónima de Torres, sólo se sabe que dejaron una hija llamada doña Ana, la cual contrajo rnatrimonio con don Miguel de Urnieta y Lezcano, español (376)-

Notes for Juan Taborda:
DON JUAN TABORDA, el hijo, contrajo matrimonio con dona Jerónima de Torres, nacida en Popayin. Dice una leyenda que fue trakda desde aquella ciudad con una escolta de "mis de doscientos soldados". Era hija del conquistador don Jerónimo de Torres, quien anos después pasó a residir a la ciudad de Antioquia. Ignórase quien serka su esposa.

Consta que ademis de estos hijos legktimos dejó otros ilegktimos llamados Francisco, Alonso y Diego, quienes, al decir de sus contemporineos, fueron muy valerosos y esforzados y prestaron al conquistador Rodas muy valiosos servicios.

De Juan Taborda y su esposa dona Jerónima de Torres, sólo se sabe que dejaron una hija llamada dona Ana, la cual contrajo rnatrimonio con don Miguel de Urnieta y Lezcano, espanol (376)-

Notes for Luis Zapata de Cirdenas:

APELLIDO ZAPATA

Se trata de un rancio y noble apellido que tiene su origen en la casa real del reino de Aragón.

El primero de quien, por documentos de la época, se tiene noticia, de este apellido, es don Garcka Zapata que fue alcaide de la ciudad de Calahorra por los anos 1.214 a 1.216.

Ahora bien: a quien se considera como principal ascendiente de esta casa y tronco de la misma es, a don Pedro Sinchez Zapata, llamado "el de Calatayud", por haber nacido en dicha ciudad.

Fue senor de las baronkas de Valtorres y de la de Vinuela y acompanó al rey don Jaime I, "el Conquistador", a la campana de Valencia que llevo a la ocupación de dicha ciudad por las huestes aragonesas.

De este preclaro caballero descendió don Rodrigo Zapata, cuyo hijo primogénito Rui Sinchez Zapata se crió desde nino en la cimara de la infanta dona Leonor, hija del rey don Pedro IV, de Aragón, y ya mayor, acompanó al rey en calidad de doncel cuando la infanta se trasladó a Soria para unirse en matrimonio con el infante don Juan, que posteriormente fue rey de Castilla y León, el primero de ese nombre.

Mis tarde, Rui Sinchez Zapata, dada la confianza que en él tenkan los reyes, fue copero mayor del rey don Enrique III y del rey don Juan II, a quienes sirvió tanto en la guerra como en la paz con gran valentka, fidelidad y por esta razón, como premio a sus servicios, el rey Juan II, le otorgó gran heredamiento en la ciudad de Madrid, donde fundó casa e hizo su asiento y casó con dona Mencka de Ayala, senora de la Villa de Barajas.

Una de las ramas de este preclaro apellido es la constituida por los Zapata de Calatayud, que proviene precisamente del primeramente citado don Rodrigo Sinchez Zapata.

ARMAS:

Escudo de gules y cinco zapatas jaqueladas de plata y sable. Bordura también de gules y ocho escudetes de oro en una banda de azur.

HERALDICA Y GENEALOGIAS

(398 a 400) ZAPATA

Este apellido espanol fue trakdo a nuestras montanas desde los tiempos de la conquista de Remedios, por los anos de 1560.

El primero de que tenemos noticia fue un capitin Juan Zapata, venido con los conquistadores Martknez de Ospina desde Victoria y Mariquita. Fue casado con dona Potenciana de Meneses, hija del conquistador Antonio de Meneses y de dona Luisa Noguerol, No se conoce descendencia de éstos.

Anos después Ilegaron a Remedios los capitanes LUIS y Francisco ZAPATA DE CARDENAS los cuales pasaron de Espana al Nuevo Reino de Granada; asistieron a las campanas contra los indios Gualkes y luégo pasaron a Remedios. Trajeron estos senores una muy interesante información levantada en Llerena, el 9 de junio de 1578, ante el Bachiller Tinoco, teniente de Gobernador y justicia mayor de la provincia de León, en la cual constan estos hechos: "Francisco Zapata Palencia, vecino de esta Villa de Llerena, digo: " que Yo me quiero ir a las Indias del mar océano a los Reinos del Pers, con licencia de S. Mgtd., que para ello tengo y para ello me conviene probar quién soy e las demis cualidades que se requieren y han de [552] tener las personas que a los dichos reinos pasaren; y a los testigos que se examinen se les preguntari lo siguiente:

lo. Si me conocen a mi, Francisco Zapata, y si conocieron a Gonzilo de Palencia y a Leonor Alvarez de Alza, difuntos, vecinos que fueron de esta villa, mis padres legitimos.

2. Si saben que el dicho Gonzilo de Palencia, mi padre era hijodalgo notorio, de que le fue hecha merced a Gonzalo de Palencia, su padre y a mi abuelo, a los cuales, a mi y mis hermanos, se nos ha guardado la dicha hidalguia"...

Citan luégo una Real Cédula expedida en Segovia, el 22 de febrero de 1464, por el Rey Enrique IV, y la cual fue confirmada por los Reyes Fernando e Isabel en Córdoba el 10 de junio de 1492. La parte sustancial de la cédula dice: "Por

ende, acatando e considerando algunos servicios que vos, Gonzilo de Palencia, hijo de Gonzilo de Avila, vecinos de la dicha ciudad, me habedes fecho e facedes, e porque sea ennoblecida e decorada e sublimada vuestra persona e linaje"... os fago e constituyo hijosdalgos notorios e de solar conocido, e podais retar e desafiar devengar sueldos, traer armas e insignias, e vos llamar del apellido que quieseredes". Usando de tales documentos pasó a las Indias el citado don Francisco y su hermano don Luis, trayendo el noble apellido de Zapata de Cardenas, el mis ilustre que habia en Llerena, que era nada menos que el de los condes de Barajas, a cuya familia pertenecka el arzobispo del Nuevo Reino don Luis Zapata de Cirdenas, de quien se deckan sobrinos.

No he podido averiguar qué suerte corrió don Francisco Zapata.

Don LUIS ZAPATA DE CARDENAS se estableció en Remedios y casó con Dona Mariana Valero, hija del conquistador Garcia Valero a quien daba el tktulo de tko.

Por declaraciones dadas en 1598 en Remedios por el capitin Diego de Ospina y otros conquistadores se sabe algo de este capitin Garcka Valero. Dicen estos declarantes "Que fue uno de los primeros pobladores y conquistadores de las ciudades de Victoria, Santa Agueda y los Remedios del N. Reino de Granada; que por los anos de 1558 entró con el capitin Asencio de Salinas a la pacificación de los indidos de Victoria y a la conquista de los indios de los Remedios, donde gastó mucha parte de su hacienda; estuvo de capitin de infanterka en la campana de Tocuyo y en el desbarate y muerte del tirano Lope de Aguirre; pasó como capitin a la ciudad de Zaragoza, en companka de don Luis Zapata, su sobrino y yerno, donde con sesenta soldados desbarató tres veces gran nsmero de indios; y sltimamente fue maese de campo del gobernador Gaspar de Rodas. Fue ademis tesorero real en Remedios y teniente de corregidor. El capitin Garcka Valero, parece fue hermano de Juan Valero también conquistador y ambos eran espanoles, pero no hemos podido hallar en los cronistas dato alguno sobre su familia ni el lugar de Espana donde naciera. Se ignora igualmente el nombre de su esposa".
[553]
Del matrimonio del capitin Luis Zapata de Cirdenas y de dona Mariana Valero quedaron, que sepamos, tres hijos, asi:

1. Alonso Zapata. Sacerdote de muchos méritos.

2. Dona Catalina Zapata de Cirdenas, esposa del capitin Juan de Toro, fundador de la familia de su apellido (368).

3. Dona Marka de Herrera, esposa de don Baltasar de Burgos Antolines (58).

Notes for Juan de Guzmin:
"El Capitin de Caballerka Dn. Juan de Guzmin, natural de la villa de Ocana, sirvió como buen vasallo en tiempos de las comunidades de Castilla y se halló en el cerco de Toledo y otras partes, donde padeció grandes peligros y trabajos. A su esposa Dna. Marka de Céspedes la trataron mal los comuneros de Ocana - Le fue forzoso salir de ella con sus hijos, dejando su hacienda perdida - y después de esto, quedando packficos de dichas alteraciones los Reynos de Espana, pasó a las Indias donde sirvió ventajosamente en las rebeliones entre Dn. Francisco Pizarro y Dn. -Diego de Almagro y contra Gonzalo Pizarro - y que aunque el Licenciado de la Gasca cuando fue a gobernar de esas Provincias, le dio una encomienda de indios el ano de 1548, no la gozó por ir a los Reynos de Espana - y murió sin gozar la encomienda". (Extractado de la Cédula expedida por el Rey i favor de Dn. Diego de Guzmin, nieto de Dn. Juan de Guzmin).

Notes for Hernando de Toro:

APELLIDO TORO

Tiene su origen en la ciudad de Toro. Segsn el cronista Diego de Urbina, sus progenitores fueron descendientes del rey de Castilla don Fernando I, quien

tuvo por hijo a don Martkn Fernindez de Toro, aunque su autenticidad histórica es bastante dudosa. Parece ser que el apellido no es castellano, ya que las casas mis antiguas aparecen en Extremadura, Madrid y Montana de Santander. De las casas extremenas, una se apellidó Toro Zambrano, y tuvo su asiento en Fuente del Maestre, partido judicial de Zafra. Otra llamada Toro-Vargas, se aposentó en Burguillos de Zafra, y otra en Madrid, se apellidó Toro-Mazote.

Armas: En campo de plata, tres fajas de azur y sobre cada una de ellas, dos toros pardos andantes.

Notes for Francisco Beltrán de Caicedo:

CAICEDO

Caicedo, escrito así, es una de las formas en que tradicionalmente se ha usado este apellido. La usamos aquí para diferenciar la familia de los próceres de Popayán de la cual trataremos en el capítulo Cayzedo (87). Sin embargo, muchas de las personas de la familia de que tratamos han escrito y escriben su apellido "Caycedo".

Don Francisco Beltran Caicedo nació en la villa de Berantevilla, cerca de Miranda de Ebro, en Alava, y fue bautizado allí el 13 de enero de 1544. Testó en Santafé el 25 de enero de 1579. Hijo legítimo de Hernán Pérez de Ocio y de doña María Ramirez Beltrán de Corcuera. (Don Hernán Pérez de Ocio tenía un hermano entero, don Baltasar de Ocio, familiar del Santo Oficio esposo de Mencia de Pinedo, fallecida en 1577, y padres de don Baltasar, don Francisco nacido el 1570 y casado el 22 de noviembre de 1598 con doña María Mendoza, con sucesión; de don Diego, nacido en narzo de 1572 quien contrajo matimonio en 1605 con Ana de Mendoza, y de María nacida en I575).

Adoptó el apellido Beltán de Caicedo, "de ilustre prosapia", para disfrutar del mayorazgo "en la montaña que vierte a la Rioja", fundado por su tío el presbítero Juan Beltrán de Caicedo que impuso esta condición al sobrino que optase por tal mayorazgo. Nieto paterno igualmente legítimo de Baltasar de Caicedo, vecino de Berantevilla donde murió en 1575, y de Catalina de Zúñiga. Este Baltasar tenía un hermano legítimo llamado Gaspar, padre de Casilda Beltrán de Caicedo, casada en España con el hidalgo Juan de Lasarte uno de cuyos hijos, Diego de Lasarte fue cura de la catedral de Santafé y canónigo de San Francisco de Quito, y el otro, Juan Beltrán de Lasarte casó en 1585 con doña Francisca de Atuesta, de cuyo matrlmonio tuvo hijo único a Juan de Lasarte, alcalde de la hermandad de Santafé en 1613, y su alcalde ordinario en 1620, esposo de doña María de Arteaga, sin sucesión. El Juan Beltrán de Lasarte tuvo hija fuera de matrimonio a doña Tomasa de Lasarte, esposa de Diego Franco de Velasco. La doña Francisca de Atuesta fue hija legítima de Jerónimo de Atuesta, y de su primera esposa, doña

Teresa Velásquez, hija ésta legítima de Antón Pardo Dasmariñas y de doña Catalina Velásquez, de quienes volveremos a tratar en breve. Don Jerónimo de Atuesta era hijodalgo de sangre, natural de Almaguer, y pasó de España a Indias en el año de 1550, a Nueva España y al Perú; y al Nuevo Reino de Granada en el de 1568 siendo justicia mayor en la villa de Santa Fe de Antioquia, y Contador Oficial Real propietario en la ciudad de Santafé desde el 25 de mayo de 1580 hasta su muerte. Fue don Jerónimo de Atuesta hijo legítimo del licenciado Alonso de Alcántara y de doña Ana Núñez de Tuesta; nieto legítimo de Luis de Lara y de Elvira de Alcántara; de Sancho Sánchez de Tuesta y de Mencia Hernández de Mena. Debemos anotar aquí que don Francisco Beltrán de Caicedo tuvo dos hermanos enteros - Don Baltasar, el mayor de ellos, testó en Zarnbrana el 12 de noviembre de 1606, y fue casado con doña Francisca de Salazar y Contreras, hija de Juan de Salazar y Catalina Contreras. Padres de dos hijos el Capitán Juan, que vino al Nuevo Reino y fue corregldor de Remedios y Mariquita, y testó, soltero, el 16 de mayo de 1639 sin dejar sucesión. Y don Fernando, cuya suerte ignoramos.

- Don Hernando vino al Nuevo Reino al mismo tiempo que don Francisco, hacia 1557, enviados ambos por su herrnano Baltasar. Ocáriz dice que don Francisco Beltrán de Caicedo vino con Venero de Leiva a principios de 1564, dato que no puede aceptarse porque en los autos de Pruebas de Caballeros de Santiago del archivo histórico de Madrid hay testimonio de su salida cuando tenía doce o trece años, o sea por los años de 1557, en compañía de su hermano Hemando, ya mencionado. Don Francisco Beltrán de Caicedo fue vecino de la ciudad de Victoria fundada en 1558, de efímera existencia. Bajo el mando del Capitán Francisco de Ospina, concurrió con otros cuarenta españoles a la fundación de la ciudad de los Remedios el domingo quince de diciembre de 1560, la cual tuvo que mudarse de sitio varias veces, por estar localizada en una región habitada por indígenas belicosos. Acompañó al Capitán Ospina en la conquista de aquella comarca, y por haber sido uno de los primeros fundadores de la ciudad, se le dió en 1561 o 1562 un repartirniento de indios en la provincia de Punchina. Allí, durante las conquistas, se hizo rico. En 1568 fue alcalde de los Remedios. Hombre muy principal", se estableció después en Santafé, donde desempeñó varios cargos y "sustentó su casa muy honrosamenteñ socorriendo pobres y soldados" según reza un documento antiguo. Obtuvo la encomienda de Suesca, en cuyas inmediaciones construyó una bellísima casa, que más adelante tomó el nombre de "Achuri Viejo", casa que conservan sus descendientes.

Don Francisco Beltrán de Caicedo casó hacia 1570 con doña María Pardo y Velásquez, que había venido de España en 1565, hija legítima de Antón Pardo Dasmariñas, natural de Betanzos en Galicia, y de Catalina Velásquez, de Palos de Moguer, ambos

hijosdalgo, el varón hijo de Gabriel González Pardo Dasmariñas, y la mujer hija legítima de Aparicio Velásquez, natural de Monsbeltrán (que después se llamó Colmenar de Arenas), doctor en leyes por Salamanca, alcalde ordinario y regidor de Moguer, e Isabel Roldán Cadena, natural del último sitio, de linaje noble. De esta familia trataremos también en el capítulo (128). Don Francisco murió en Santafé a consecuencia de la caída de un caballo. En el testamento que otorgó cuando se sentía moribundo, encarece a sus hijos que obedezcan, sirvan y reverencien a doña María y que guarden entre ellos "la paz y amor que Dios manda y vivan como hijos de quien son". Era tradición de la familia Beltrán de Caicedo entregar al menor de los hijos un "Lignum Crucis", y la costumbre se conserva. Del matrimonio Beltrán de Caicedo Pardo fueron hijos según lo declara el padre en el referida testamento: Fernando, Francisco, Catalina y otro por nacer, que se llamó Baltasar. Observamos sí, que una Francisca de Corcuera, mujer de don Antonio de Meneses y Parrilla, mencionada por Ocáriz como hija legítima de Francisco Beltrán de Caicedo y doña María Pardo, no figura en dicho testamento.

---

Casa de Medinasidonia, casa nobiliaria espanola (castellana), que tiene su origen en el tktulo otorgado por Juan II en 1445 a un descendiente de Guzmin el Bueno, Juan Alonso de Guzmin (1410-1468), conde de Niebla y de Sanlscar de Barrameda. Entre sus descendientes merecen destacada atención: el séptimo duque, Alonso Pérez de Guzmin -que en 1588 mandó la Armada

Invencible- y Gaspar Alonso Pérez de Guzmin, el noveno duque, que junto a su primo, el marqués de Ayamonte, promovió en Andalucka, en 1641 un movimiento separatista. Cunado del nuevo rey de Portugal -tras su separación de Castilla en 1640-, el noveno duque de Medinasidonia intentó seguir los mismos pasos. La pésima dirección de la rebelión permitió que pronto fuera apaciguada y terminó con la defección del marqués de Ayamonte -ejecutado como cabecilla en 1648- y la detención de algunos rebeldes. Medinasidonia fue confinado de por vida en Castilla la Vieja y perdió su senorko de Sanlscar de Barrameda.
En 1777 se extinguió la descendencia por lknea masculina pasando el tktulo al marqués de Villafranca del Bierzo, José Marka Ilvarez de Toledo.

Notes for María de Guzmán Palafox y Portocarrero:

- El linaje, prosapia y alcurnia querríamos saber, replicó Vivaldo. A lo cual respondió Don Quijote:
- No es de los antiguos Curcios, Cayos y Cipiones romanos, ni de los modernos Colonnas y Ursinos, ni de los Moncadas y Requesenes de Cataluña; ni menos de los Rebellas y Villanovas de Valencia; PALAFOXES, Nuzas, Rocabertis Corellas, Lunas, Alagones, Urreas, Foces y Gurreas de Aragón; Cerdas, Manriques, Mendozas y GUZMANES de Castilla; Alencastros, Pallas y Meneses de Portugal; pero es de los del Toboso de la Mancha, linaje, aunque moderno, tal que puede dar generoso principio a las más ilustres familias de los venideros siglos; y no

se me replique en esto, si no fuere con las condiciones que puso Cervino al pie del trofeo de las armas de Orlando, que decía:

Nadie las mueva
que estar no pueda
con Roldán a prueba.

(Sevilla, 1333-Santo Domingo de la Calzada, 1379). Rey de Castilla. Hijo bastardo de Alfonso XI y Leonor de Guzmin, llamado también conde de Trastamara, el Fratricida y el de las Mercedes. Ayudado por Duguesclin, destronó a su hermano Don Pedro el Cruel, a quien dio muerte en lucha personal en Montiel (1369). Sometió después a los partidarios de aquél, venció a Portugal, ayudó a los franceses en su lucha contra los ingleses, que fueron vencidos en La Rochela (1372), y finalmente derrotó a Carlos el Malo, rey de Navarra (1379). Fue proverbial su prodigalidad con sus favorecedores.

Henry II (of Castile and León) (1333?-79), known as Henry (Enrique) of Trastamara, king of Castile and León (1369-79), born in Seville. He was the illegitimate son of Alfonso XI of Castile, who made him count of Trastamara. After the accession of Alfonso's legitimate son, Peter the Cruel, to the throne of Castile and León in 1350, Henry fled to France. With an army of mercenaries financed by the kings of France and Aragon, Henry invaded Castile in 1366 and drove Peter from the throne. Edward, prince of Wales, intervened for Peter, however, and defeated Henry at Nijera in 1367. Henry defeated and killed Peter in 1369, becoming king and continuing his alliance with Charles V of France in the Hundred Years' War. In 1372 his navy destroyed an English fleet off La Rochelle. He was succeeded by his son John I.

ALONSO PÉREZ DE GUZMIN "EL BUENO"

El gesto de Guzmin el Bueno
---

Tarifa, 1 de agosto de 1294.
Las tropas de los benimerines vuelven al norte de Ifrica, tras una humillante

derrota ante las huestes de Sancho IV de Castilla. Mohammed II de Granada solicitala ayuda de los benimerines, para poder enfrentarse a los castellanos, cuyo rey ha encargado a Mathe de Luna y a Nsnez de Lara y sus hijos la defensa de Andalucia. En la primavera de 1294, el ejército benimerkn atraviesa el estrecho y sitia la plaza de Tarifa. que esti defendida por Alonso Pérez de Guzmin, La situación aparece complicada para Castilla. ya que ha de enfrentarse al emir granadino y a sus aliados benimerines, mientras Aragón y Portugal ven con desconfianza sus despliegues militares.

El ejército castellano debe atender a la defensa de Tarifa, al tiempo que ha de vigilar la larga frontera con Granada, para prevenir cualquier otro inesperado ataque. Ademis, Sancho tiene que neutralizar las maniobras de su hermano, el infante Juan, que se ha puesto al servicio del rey mogrebi Yusuf. Es precisamente el infante Juan uno de los que intrigan para que los henimerines ataquen Castilla, poniéndose él mismo al frente de las tropas con cinco mil zenetes que se han de unir a las tropas procedentes de Algeciras. Sin embargo, la plaza de Tarifa, bien guarnecida por Juan Mathe, resiste heroicamente al
mando de Alonso de Guzmin, lo que obliga al infante Juan a planear otra estrategia distinta.

En palabras de un historiador irabe: «Apurado el principe Juan por no poder cumplir la palabra que habia dado al rey, acordó de probar por otra via lo que por fuerza no era posible.» El infante Juan, que tiene prisionero a un hijo pequeno de Alonso de Guzmin, Io utiliza para tratar delograr la rendición de la plaza. Juan amenaza a Alonso de Guzmin con matar a su hijo. si no se rinde. La respuesta es clara: "Antes queria que me matasen aquel hijo y otros cinco si los toviese que non darle la villa del rey". Y para acompanar sus palabras, Alonso de Guzmin entrega su propia daga al sitiador para que con ella sacrifique a su hijo. Juan no vacila y corta el cuello al nino, haciendo arrojar después, por medio de una catapulta, la cabeza del infante al interior de la fortaleza, para escarnio de su padre. Sin embargo, ni las medidas militares ni los amedrenta mientos personales consiguen rendir Tarifa: los benimerines han de levantar finalmente el cerco, iniciando una vergonzosa retirada hacia Algeciras, plaza esta que tampoco podrin retener; Yusuf tiene que volver a Ifrica para evitar caer prisionero.

Su heróica actitud, por encima de sus intereses personales, vale a Alonso de Guzmin el sobrenombre de "el Bueno".

La muerte de Guzman el Bueno

Granada, 16 de marzo de 1309
Nasr es proclamado cuarto rey nazark de Granada, dos dkas después de que su hermano Mohammed lll, impedido por la ceguera, fuese obligado a abdicar en él. En Granada, el descontento por el gobierno de Mohammed lll es aumentado por su polktica belicista, que amenaza con provocar un estado de guerra generalizado. Ciego y retirado en su palacio de Granada, es forzado a abdicar en su herrnano Nasr, un instrumento en manos de los arraeces.

Los reyes de Castilla, Fernando IV, y de Cataluna-Aragón, Jaime II, intentaron aprovechar la conflictividad interna del reino nazark para avanzar en la reconquista. Su acercamiento culmina en el acuerdo de amistad mutua y guerra contra Granada, firmado en Alcali de Henares el 19 de diciembre de 1308 por sus embajadores. A continuación, Jaime II inicia movimientos diplomiticos para asegurarse que el sultin de Marruecos. Abu Rebia, no prestari ayuda a los granadinos. Con ese objetivo envka en abril una flota a Marruecos, para ayudar a Abu Rebia a apoderarse de Ceuta, plaza nazark que toman el 20 de julio, Jaime II y Abu Rebia firman el tratado de Fez, que resulta muy ventajoso para los comerciantes mediterrineos, pero queda lejos de las pretensiones militares de Jaime II, porque el marroquk no desea comprometerse.

En julio, castellanos y catalanoaragoneses ponen sitio a Algeciras y Almerka, respectivamente. Al principio Ios cristianos obtienen éxitos, pero su ataque aproxima a Granada y Marruecos, que sellan un pacto en septiembre. Desde entonces, las dificultades se acumulan sobre Jaime y Fernando: Almerka resiste, muere Alonso Pérez de Guzmin (1) y el infante Juan Manuel traiciona a Fernando, abandonando Algeciras. En enero, el castellano inicia conversaciones con Granada, que reafirma el vasallaje nazark y recupera Quesada y Bedmar. Poco después, Jaime ordena la retirada de sus tropas de Almerka.

(1) Las tropas de Fernando IV, dirigidas por Alonso Pérez de Guzmin, conocido por Guzmin el Bueno. con la decisiva participación de naves catalanas, conquistan Gibraltar a los musulmanes. Es la culminación de una campana no muy fructifera. Los intentos de conquista de Algeciras y Almerka resultan un fracaso, llegando a fallecer el mismo Alonso Pérez de Guzmin en una arriesgada incursión en el reino nazark, en la que se llega a poca distancia de la capital.

Notes for Alfonso XI (Rey de Castilla):
Alfonso XI. 1311-1350. Rey de Castilla y León. Nació en Salamanca. Rey desde 1312 Vencedor de los moros cerca de Tarifa en 1340, Iogró conquistar AIgeciras y fallece durante el sitio de Gibraltar, a consecuencia de la peste negra. Alfonso Xl, que alcanzó la mayorka de edad en 1325, inicia su gobierno personal con una enérgica acción para robustecer la autoridad real, implantando los corregimientos municipales, suprimiendo las hermandades y controlando a la nobleza. Crea el primer regimiento municipal en la ciudad de Burgos. El regimiento municipal, o cabildo,pretende ser la representación del comun de la población. En la prictica, acaba convirtiéndose en una corporación vitalicia, cuyos miembros son elegidos de entre los pobladores mas ricos del lugar.

En 1325, Alfonso XI convocó cortes en Valladolid y, aunque sólo tenka catorce anos, consiguió que le declarasen mayor de edad. A partir de entonces, en acciones que le valieron el tktulo de Justiciero, fue matando a sus tutores y apoderindose de sus posesiones y castillos. De esta forma empezó a depender de la corona el senorko de Vizcaya, que era hasta aquel momento el feudo de Juan el Tuerto. Una vez sometida la levantisca nobleza, Alfonso XI podrka llevar a cabo su obra de expansión y modernización de Castilla.

En el plano internacional, participó en la guerra de los Cien Anos, consiguiendo ampliar con ello el comercio de la lana y dominar los mercados de Flandes. Su labor reconquistadora es de grandes éxitos. Vence a los benimerines en la batalla del Salado (1340) y Algeciras (1344), y logra ask alejar el peligro de una invasión. Le sucede su hijo Pedro I (1334 69) que pretende cambiar radicalmente la fisonomka social y económica de Castilla, aunque sin éxito. Posiblemente es el autor de la primera cancion trovadesca en castellano

A la muerte de Alfonso XI quedaba cerrado un perkodo en que abundaron en Castilla las agitaciones nobiliarias, provocadas por los pretendientes a la tutorka de la edad menor del rey, pese a ser ejercida esta con mano firme por su abuela, Maria de Molina. Los que aspiraban a ser tutores eran los infantes don Pedro, tko de Fernando IV, y don Juan Manuel, con la ayuda de otros caballeros, y en realidad lo que consiguen es llevar el reino a la anarquka. Tras morir don Pedro y don Juan ante Granada, asn surgirkan otros nobles, como don Juan el Tuerto y don Felipe, que continuaron ensangrentando Castilla con sus pretensiones.

CRONICA DE LA HUMANIDAD 351

Alfonso XI, byname ALFONSO THE JUST, Spanish ALFONSO EL JUSTICIERO (b. 1311, Salamanca, Leon--d. March 26, 1350, Gibraltar), king of Castile and Leon from 1312, who succeeded his father, Ferdinand IV, when he was only a year old.

His minority was marked by violent strife between factions of nobles, but when he came of age, in 1325, he restored order with unprecedented vigour. He gave new powers to the municipalities and to the Cortes, in exchange for their support against the nobles, and furthered the power of the crown by choosing officials without aristocratic affiliations. He then turned his attention to the Marinid
kings of Morocco, who had seized Gibraltar and routed the Castilian fleet at Algeciras in 1340. With the Portuguese, he defeated the invaders at Rko Salado in 1340 and recaptured Algeciras in 1344.

Alfonso XI promulgated important administrative and legal reforms in the ordinances of Alcali de Henares in 1348. Alfonso was assiduously courted by both France and England, who wished for an alliance that would give them the support of his powerful fleet, but he avoided committing himself to either party.

Notes for Leonor de Guzmin:
Durante su campana contra Granada, Alfonso XI -ya casado con Marka de Portugal- conoce a Leonor de Guzmin y se enamora de ella. De esta relación apasionada nacerkan varios hijos que iban a ocupar puestos de suma importancia. Su descendencia formó la poderosa casa de los Trastamara, reyes en Castilla, Aragón y Navarra, Estos eran Enrique, Fadrique, Tello, Sancho, Pedro y Juan. Con la desaparición del monarca, Leonor perdió todos los favores que se le habkan concedido y su rival, la legktima reina, ordenó que le dieran muerte en su refugio de Talavera de la Reina.

En el Monasterio de Nuestra señora de las Cuevas, entre Santiponce y Sevilla, en la capilla de capítulo que llaman "el Panteón" y mandados erigir por su hijo don Fadrique Enríquez de Ribera, como lo dice una tabla de bronce puesta en el suelo de la capilla. La escultura de estos sepulcros, todos de mármol, es muchísima. En el de don Pedro Enríquez hay primeramente una urna sobre su pedestal, con especie de arpías, que la sostienen, y encima, su estatua echada en traje militar. En dicho pedestal se ven tres escudos de armas sosteniendo unos niños el del medio. Sobre el plano donde asienta la urna hay otros dos niños de gran ejecución en ademán de llorar y sumamente expresivos, y en particular el de la mano izquierda.

Tiene esta máquina dos columnas con muchas labores a cada lado, que alternan con tres imágenes de santos. Los frisos y demás partes del cornisamento están llenos de labores exquisitas a la grotesca y una imagen de Nuestra Señora en el remate. En el fondo del nicho se ve figurada la Resurrección de Cristo, su aparición a la Magdalena, etcétera. En una de las piedras está esculpido este letrero:

Notes for Juan Manuel:
Juan Manuel era nieto de San Fernando y tio de Fernando IV El Emplazado. Ademis de guerrero, intrigante y aventurero, fue un gran poeta. El autor de Conde de Lucanor y una crónica, que aunque breve y sucinta contiene stiles nociones sobre los sucesos de aquellos tiempos. Fue un hombre turbulento, inquieto y bullicioso, que promovió muchos conflictos durarante los gobiernos de Alfonso el Justiciero y de Fernando El Emplazado. Don Juan Manuel casó con Dona Isabel, hija de Jaime de Mallorca.

Juan Manuel, Don (b. May 5, 1282, Escalona, New Castile--d. 1348, Córdoba), nobleman and man of letters who has been called the most important prose writer of 14th-century Spain.

The infante Don Juan Manuel was the grandson of Ferdinand III and the nephew of Alfonso X. He fought against the Moors when only 12 years old, and the rest of his life was spent deeply involved in the political intrigues of his time.

Don Juan Manuel is best known for his Libro de los enxiemplos del conde Lucanor et de Patronio (1328-35; Count Lucanor: or, The Fifty Pleasant Stories of Patronio, 1868), a treatise on morals in the form of 50 short tales, in which Count Lucanor asks questions of his counsellor. The work was written in a lucid and straightforward manner, with an informal and personal prose style, almost completely free of the usual ornate language of the day. It greatly influenced the development of Spanish prose, setting a standard for writers who followed. Of Manuel's 12 books, several are lost. Outstanding among his extant works are Libro de los estados ("The Book of States"), a treatise on politics, and Libro del caballero y del escudero ("The Book of the Knight and the Squire"), a treatise on society.

Notes for Fernando IV (Rey de Castilla y León):
Ferdinand IV (b. Dec. 6, 1285, Seville--d. Sept. 7, 1312, Jaén, Andalusia), king of Castile and Leon, succeeding his father, Sancho IV, in 1295.

Ferdinand survived his minority through the tact and bravery of his mother, Marka de Molina, who acted as regent. He was further aided by the loyalty of the citizens of Ivila, where he took refuge during an anarchic period marked by conspiracies and rebellions of the Castilian nobility against the crown. Upon coming of age, Ferdinand rejected his mother's guidance but proved to be a weak king. His forces recaptured Gibraltar from the Moorish kingdom of Granada in 1309.

Jaime III (de Mallorca) (1315-1349), rey de Mallorca (1324-1343). Nacido en la localidad siciliana de Catania, accedió al trono cuando era un nino, tras la muerte de su tko Sancho I. Casó con una hermana de Pedro IV de Aragón, pero éste, decidido a incorporar a su soberanka el reino de Mallorca, aprovechó una excusa para desposeer a Jaime III, mediante sentencia, de sus territorios (1343), a lo que siguió, unos meses mis tarde, la invasión y ocupación de la isla. Luego incorporó Pedro IV los territorios continentales del reino de Mallorca, a excepción de Montpellier. Jaime III vendió Montpellier al rey de Francia y organizó una flota, con la que pretendka recuperar Mallorca, pero fue derrotado y muerto en la batalla de Llucmajor (1349). Se le atribuye la redacción de unas normas denominadas 'leyes palatinas'.

Alfonso IX (b. 1171, Zamora, Leon--d. Sept. 24, 1230, Villa nueva de Sarria, Galicia), king of Leon from 1188 to 1230, son of Ferdinand II of Leon and cousin of Alfonso VIII of Castile (next to whom he is numbered as a junior member of the family). A forceful personality, Alfonso IX was determined to recover Leonese territory lost to Castile; and, despite the fact that he had done homage to Alfonso VIII, he did not hesitate to ally himself with the Almohads to further this end. As
a result, his kingdom was placed under papal interdiction, and he was finally compelled to marry the Castilian king's eldest daughter. He refused, however, to join his father-in-law in the crusade against the Almohads in 1212 unless the lost lands were first restored by Castile. This was not done and the Leonese army was, therefore, absent from Las Navas de Tolosa. Nevertheless, operating on his own, Alfonso IX won important victories beyond the southern frontiers of Leon, taking Ciceres (1227) and Mérida and Badajoz (1230) from the Almohads. These victories opened the road for a future reconquest of Seville.

Alfonso IX (1166?-1230), king of León (1188-1230). In 1197 he married Berengaria, daughter of his first cousin King Alfonso VIII of Castile and granddaughter of King Henry II of England. Pope Innocent III annulled the marriage in 1214 because of the family relationship of Alfonso and Berengaria. Alfonso founded the University of Salamanca and captured Ciceres, Badajoz, and Mérida from the Muslim Almohads.

En 1217 accedió al trono castellano, a pesar de la oposición de su padre, y muerto éste, al trono leonés (1230), unificando así ambos reinos. Fernando III reconquistó diversas plazas extremeñas y casi toda Andalucía, excepto el reino de Granada, tierrra cuya repoblación inició rápidamente. El sistema de repoblación emprendido se basó en las grandes propiedades que se otorgaban a las órdenes militares, los obispos y los particulares, y que constituye el origen del latifundismo andaluz. Entre las plazas que reconquistó a lo largo de sus campañas se encuentran Montiel, Medellín, Baza (1226), Trujillo, Beda, Córdoba (1232-1236), Jaén (1246), Sevilla (1248), Medina Sidonia, Arcos, Jerez y Cádiz (1250). En otro orden de cosas, Fernando III firmó con Aragón el tratado de Almizra (1244), mediante el cual se fijaron las fronteras entre este reino y el de Castilla y León. Mandó traducir al castellano el Liber Iudiciorum, un ordenamiento jurídico de raíz visigoda que, con el nombre de Fuero Juzgo, se convirtió en uno de los principales pilares del Derecho medieval. Fundó las catedrales de Burgos (1221) y Toledo (1226), así como la Universidad de Salamanca (1239). Fue canonizado, en 1671, por el Papa Clemente X.

In 1217 Ferdinand's mother, Berengaria (1171-1246), renounced her title to the Castilian throne in favor of her son. Alfonso, who had himself expected to acquire Castile, was angered at his wife's action, and, aided by a group of Castilian nobles favorable to his claim, made war upon his newly crowned son. Ferdinand, however, with the wise counsel of his mother, proved more than a military match for Alfonso, who at length was forced to abandon his plan of conquering Castile. Through the good offices of Berengaria, Ferdinand was able to effect the peaceful union of León and Castile upon the death of his father in 1230. Ademis de guerrear contra los irabes, continuó la obra literaria de su padre, y, aunque su producción fue muchksirno menor que la de aquél, figura en el Catilogo de Autoridades de la Lengua, publicado por la Academia Espanola.

Contrajo matrimonio en 1281 con su primo Sancho IV, aunque sin la preceptiva dispensa papal, lo que ocasionarka, a ella y a sus descendientes, graves problemas futuros. Al fallecer Alfonso X, en 1284, ambos fueron coronados reyes y Marka alentó la amistad de Sancho IV con Francia, como vka indirecta de obtener la bendición de la iglesia a su matrimonio. Su estrategia fracasó inicialmente, al tiempo que López Dkaz (de la familia de los Haro, opuesta a los Lara, a quienes la reina apoyaba) se convirtió en valido del rey. Por fin obtuvo su propósito en la Asamblea de Toro (1288), que estableció la alianza con Francia y supuso la cakda del valido, muerto en Alfaro por mano del propio rey (1288). En 1295 la muerte de Sancho IV significó la vuelta a la polktica de Marka de Molina como regente de su hijo Fernando IV. Durante ese perkodo tuvo lugar la guerra civil entre los partidarios del nuevo rey, dirigidos por Marka, y los defensores de los infantes de la Cerda, apoyados por Jaime II de Aragón, que no reconockan a Fernando como legktimo heredero. Ante el peligro de unión entre Aragón y Portugal, la regente casó a su hijo Fernando con Constanza de Portugal y la nobleza depositó de nuevo la confianza en ella en las Cortes de Valladolid (1300). Fernando IV afianzó su posición cuando las gestiones diplomiticas de su madre consiguieron que Roma legitimara su matrimonio y, por tanto, a sus hijos (1301). Al alcanzar el rey la mayorka de edad, sus seguidores intentan separarlo de su madre, pero el caricter enérgico de ésta equilibró la balanza: consiguió no sólo que cesaran los enfrentamientos, sino también la renuncia de Alfonso de la Cerda a sus aspiraciones. Castilla vivió entonces un perkodo de paz hasta la muerte de Fernando IV (1312). Vuelta de nuevo a la regencia durante la minorka de su nieto Alfonso XI (1313-1321), se desataron las hostilidades entre los partidarios de Marka y los de Constanza de Portugal. Al morir Constanza, la reina compartió la tutorka con los infantes Pedro y Juan, hasta que éstos encontraron la muerte en la Vega de Granada (1319), suceso que renovó las luchas. Tras la sublevación de la nobleza en Talavera (1320), surgió la iniciativa de crear una nueva regencia integrada por la reina, Don Juan Manuel y el infante Felipe. Como ese triunvirato excluka a Juan el Tuerto, éste organizó una nueva ofensiva durante cuyo desarrollo la reina falleció.

Notes for Dionisio (Rey de Portugal):
Dinis, also spelled DINIZ, English DENIS, Spanish DIONISIO (b. Oct. 9, 1261--d. Jan. 7, 1325), sixth king of Portugal (1279-1325), who strengthened the kingdom by improving the economy and reducing the power of the nobility and the church.

The son of Afonso III, Dinis was educated at a court subject to both French and Castilian cultural influences and became a competent poet. He founded the first university in Portugal--in Lisbon--in 1290. A skilled negotiator, Dinis was able to establish with Castile a definitive frontier for Portugal. At home, he made the authority of the crown supreme, intervening in local government, reducing the power of the nobility, and combating the supremacy of the clergy, particularly in regard to their territorial wealth (laws of disentail in 1286, 1291, and 1309). Concordats with the papacy (1289 and 1290) ended the struggle with the church.

Dinis took a special interest in the land, encouraging forestry plantation and the fuller development of the country's agricultural resources. He also showed great concern for shipbuilding and for the extension and protection of commerce. The last years of the reign were disturbed by a rebellion of his son, the future Afonso IV, who succeeded to the throne on his father's death. Dinis' wife would become Saint Elizabeth (Isabel) of Portugal.

Dionisio, in English, Denis (1261-1325), king of Portugal (1279-1325), the son of King Alfonso III. Diniz's reign was notable for the termination of the wars between Portugal and the united kingdoms of Léon and Castile, achieved by intermarriage between his family and that of King Ferdinand IV of Léon and Castile; and for encouragement of Portuguese agriculture, trade, and arts. He founded schools for the study of agriculture and improved methods of cultivation; because of his interest in agriculture he became known as Ré Lavrador (“the Farmer King”). Diniz also made Portuguese the language of the law courts in his kingdom. A poet himself, he was a patron of artists and musicians and of education, establishing the University of Coimbra (at Lisbon, 1290; moved to Coimbra, 1306). He made (1294) a commercial treaty with England that benefited Portuguese trade and established (1317) a royal navy. He was succeeded by his son, Alfonso IV.
Durante su reinado se establecieron los lkmites fronterizos entre Portugal y Espana que hoy, con muy pocas variaciones estin vigentes.

Elizabeth OF PORTUGAL, SAINT, byname THE PEACEMAKER, or THE HOLY QUEEN, Portuguese SANTA ISABEL DE PORTUGAL, or A PACIFICADORA, or A RAINHA SANTA (b. c. 1271--d. July 4, 1336, Estremoz, Port.; canonized 1625; feast day July 4), daughter of Peter III of Aragon, wife of King Dinis (Denis) of Portugal.

She was named for her great-aunt St. Elizabeth of Hungary and received a strict and pious education. In 1282 she was married to Dinis, a good ruler but an unfaithful husband. Despite the corrupt court life, Elizabeth maintained her devout habits, helped the sick and the poor, and founded charitable establishments. When her son Afonso rebelled against his father, Elizabeth rode
between the two armies and reconciled father and son. She also helped settle disputes among other royal relatives. After Dinis died in 1325, she lived at Coimbra, Port., near a Poor Clare convent that she had founded, and devoted herself to people in need. She died on her way to the battlefield to make peace between her son, then King Afonso IV, and Alfonso XI of Castile.

Afonso IV, byname AFONSO THE BRAVE, Portuguese AFONSO O BRAVO (b. Feb. 8, 1291, Lisbon--d. May 28, 1357, Lisbon), seventh king of Portugal (1325-57).

Afonso IV was the son of King Dinis and of Isabella, daughter of Peter II of Aragon. Afonso resented his father's generosity toward two illegitimate sons and in 1320 demanded to be given power, remaining in open revolt until May 1322. His mother reconciled them, but the conflict broke out again. When Dinis died, Afonso succeeded to the throne, but the quarrel was transferred to Castile, which sheltered his half brother. However, when the Marinid sultan of Morocco invaded
Spain in 1340, Afonso IV led a force that joined Alfonso XI of Castile in the victory of the Salado River near Tárifa (Oct. 30, 1340).

In 1355 Afonso ordered the murder of Inês de Castro, the Galician mistress of his heir, the future Peter I, because he feared the influence of her family in Portugal. Peter rebelled, but Afonso finally was reconciled with him before his death.

Notes for Alfonso X el Sabio (Rey de Castilla y León):
ALFONSO X EL SABIO REY DE CASTILLA Y LEON
(Toledo, 1221-Sevilla, 1284). Rey de Castilla y León. Además de realizar grandes avances en la Reconquista, este monarca mantuvo activas relaciones con los demás reinos cristianos de la Península e intervino en la política europea. El sobrenombre de el Sabio procede del gran impulso que dio a la ciencia y la cultura. Hijo de Fernando III y Beatriz de Suabia, siendo todavía

infante conquistó el reino musulmán de Murcia, del que tomó posesión en 1244 en nombre de su padre. Ello fue posible gracias al tratado de Almizra, que acordó con Jaime I de Aragón ese mismo año. Con el fin de estrechar los lazos entre ambas coronas, casó con Violante, hija del monarca aragonés, lo que le permitió proseguir la Reconquista sin preocuparse por las rivalidades dinásticas. Una vez instalado en el trono (1252), dedicó todos sus esfuerzos a la conquista de Andalucía: ocupó Jerez, Lebrija, Medina Sidonia, Arcos, Niebla y Cádiz. No obstante, tales avances no redundaron en favor de la corona, sino de la nobleza, a la que Alfonso X concedió enormes beneficios territoriales y jurisdiccionales. Fue el primer monarca castellano que se preocupó de tener una presencia en Europa. Así, a la muerte de Guillermo de Holanda (1257), pretendió ser elegido para la dignidad imperial alegando el parentesco de su madre con los Staufen alemanes, pero no consiguió su propósito a causa de la hostilidad del Papado y de Francia, y también por la oposición de muchos nobles castellanos, que veían en ello una sangría de los recursos que debían dedicarse a la Reconquista. Preocupado por la difusión de la cultura y empeñado en una vasta labor legislativa, patrocinó la traducción del árabe al castellano de numerosas obras de carácter científico (como El libro del saber de astronomía, que incluía las llamadas Tablas alfonsíes), e impulsó la redacción del Fuero Real (recopilación de la tradición jurídica castellana) y, sobre todo, de las Siete Partidas. A él se deben también la Crónica general y la General e grande estoria, que suponen sendos intentos de establecer una historia de España y una historia universal, respectivamente. Las dotes de escritor del monarca se reflejaron en la poesía en lengua gallega, en especial en sus Cantigas a Santa María, conjunto de 420 canciones en alabanza de la Virgen. Los últimos años del reinado de Alfonso X se vieron ensombrecidos por el enfrentamiento, por motivos sucesorios, entre el rey y su segundo hijo, el futuro Sancho IV. Éste contaba con el apoyo de la nobleza y las ciudades, mientras que el monarca se inclinaba por los hijos de su primogénito Fernando de la Cerda, fallecido en 1275. El pleito dinástico se convirtió pronto en guerra civil, en la que cada bando buscó aliados en el exterior. En 1282 Sancho consiguió deponer a su padre, que hubo de retirarse a Sevilla.

Alfonso X, byname ALFONSO THE WISE, Spanish ALFONSO EL SABIO (b. Nov. 23, 1221, Burgos, Castile--d. April 4, 1284, Seville), king of Castile and Leon from 1252 to 1284.

His father, Ferdinand III, conquered Andalusia and imposed tribute on the remaining Muslim states in Spain--Murcia and Granada. His mother, Beatrice, was granddaughter of the Holy

Roman emperor Frederick I. Alfonso, already known as a scholar, became king in 1252. He had many scholars in his travelling court, and he was an active participant in their writing and editing. Some were experts on Roman law, which Alfonso hoped to make the basis of a uniform code for his lands. The court, gifts to friends, and foreign intrigue proved expensive, and Alfonso taxed heavily.

Alfonso crushed a Muslim revolt in 1252, and a revolt by nobles in 1254. Morocco, Granada, and Murcia invaded in 1264, but Alfonso won with Aragonese help, and annexed Murcia. In 1272, a revolt, and withdrawal to Granada, by nobles forced him to confirm local privileges.

In 1273 Alfonso founded, and granted privileges to, the Mesta, a guild of migratory shepherds.

Alfonso claimed many foreign titles, notably that of Holy Roman emperor in 1256. In 1257, bribes won him four electoral votes for emperor to three for Richard of Cornwall, but Richard, unlike Alfonso, could go to Germany. In 1275 Richard died, and Alfonso went to France to appeal to Pope Gregory X, who persuaded him to renounce his claim.

While Alfonso was in France, Morocco and Granada invaded Castile. Ferdinand, Alfonso's eldest son, was killed in the fighting. Sancho, Alfonso's second son, became a hero in defeating the invaders, and proclaimed himself heir, disregarding Ferdinand's sons, who were nephews of the French king. Alfonso recognized Sancho's claim in 1278, but, under French pressure, became ambiguous in 1281. Taking advantage of grievances against Alfonso, Sancho declared himself regent. Towns and nobles rose against Alfonso, who had to take refuge in Seville. Some of Sancho's followers deserted, but, after Alfonso died, Sancho took Seville and became King Sancho IV.

Alfonso's court scholars wrote mostly in Castilian Spanish, which they made a literary language by regularizing the syntax and by borrowing --and defini ng- words for concepts not previously discussed. In their Premera crónica general, they tried to determine historical facts from chronicle, folklore, and Arabic sources. Less factual was their Gran e general estoria, a world history, with extensive transla tions from the Old Testament. The Tablas Alfonsíes were
planetary tables, based on an Arabic source but updated by observations at Toledo 1262-72. Siete partidas was the most important law code. It was based on Roman law, and contained discourses on manners and morals, and an idea of the king and his people as a corporation--superior to feudal arrangements--with the king as agent of both God and the people. After Alfonso's

death, Siete partidas was proclaimed the law of all Castile and Leon in 1348, and the language of Alfonso's court evolved into modern Castilian Spanish.

Alfonso IV el Benigno (1299-1336), rey de Aragón y conde de Barcelona (1327-1336). Era el segundo hijo de Jaime II de Aragón, pero accedió al trono al profesar como religioso su hermano Jaime, el heredero. Siendo infante habka tomado parte activa en la conquista de Cerdena. Posteriormente hubo de enfrentarse a diversas insurrecciones sardas, en particular la de Sassari

(1329). Mantuvo una guerra con Génova, que apoyaba a los rebeldes sardos e impulsó la repoblación de Cerdena con hispanos. Asimismo planeó, conjuntamente con Castilla, una campana contra los granadinos, pero no se realizó. Débil de caricter, creó el marquesado de Tortosa para su hijo Fernando, primogénito de su segunda esposa Leonor de Castilla. Pero ese proyecto, que significaba la partición del reino, no se llevó finalmente a cabo.

Ruy Nunez de Guzmin, Senor de Guzmin en campo de Roa, rico-hombre, del que existe un documento original firmado en 1154, y que casó con Dona Godo, hija del Conde D. Gonzalo Nunez de Lara y de Dona Godo Salvador.

APELLIDO GUZMIN

De acuerdo al conocido tratadista don Francisco Piferrer, los orkgenes del linaje Guzmin resultan un tanto oscuros, lo que se acrecienta cuanto el apellido a estudiar es tanto mis antiguo y noble.

Esto lleva, en ocasiones, a una falta de solidez, al verse precisado el investigador a recurrir a meras conjeturas. Viene todo esto a colación, de acuerdo a lo expuesto por el tratadista anteriormente citado, puesto que en este caso se da en los cinco principales solares castellanos, Lara, Haro, Castro, Guzmin y Villamayor. cuyos primitivos progenitores no son ficiles de designar.

Cinéndonos al linaje de los Guzmin, encontramos que unos pretenden que descienden de los Duques de Bretana, por medio de un caballero llamado Goodman o Gudman, que significa, en inglés, "buen hombre", el cual fue un ricohombre en el reinado de don Fernando I, y fundó la torre de Guzmin, cerca del lugar de Roa, en el obispado de Osma.

Otros indican que no es ask, sino que Guzmin proviene de Flavio Gundemaro, vigesimoprimero rey godo de Espana, que murió en Toledo, en el ano 612, y otros, hacen subir el origen de este linaje a tiempos asn mis remotos.

Pero dejando aparte todo lo anterior, que, como acertadamente indica Piferrer no dejan de ser meras conjeturas, habri que referirse a lo históricamente comprobado: Don Rui Nsnez, un ricohombre que vivió en el siglo XII, fue el primero que tomó el apellido Guzmin, por ser el Senor de la referida Torre de Guzmin, cerca de Roa.

Y si bien, algunos de sus ancestros ya tenkan el Senorko de esta torre, no habkan tomado el nombre, porque ya decimos que hasta finales del siglo XII no se empieza a hablar de él. Don Rui contrajo matrimonio con dona Gozo Gonzilez de Lara y tuvo por hijos a Alvar, o Alvaro, quien no dejó sucesión, a don Pedro, a través del cual se continuó la varonka de esta casa, y a don Félix, que casó con dona Juana de Aza, y de cuyo matrimonio nació Santo Domingo de Guzmin.

Notes for Fernando II (Rey de León):
Ferdinand II (b. 1137--d. Aug. 22, 1188, Benavente, Leon), king of Leon from 1157 to 1188, second son of Alfonso VII.

Despite several internal revolts against his rule, Ferdinand's reign was notable for the repopulation of Leonese Extremadura and for the victories he secured farther south against the Almohads in the last 20 years of his reign. These included the capture of Alcintara (1166) and Badajoz (1169). He also gave important support to the new military order of Santiago, founded with his approval in 1170. Ferdinand, who called himself rex hispanorum ("king of the Spaniards"), established a temporary tutelage over Castile during the minority of his nephew Alfonso VIII and occupied Segovia and Toledo (1162-66), though Alfonso later reacted violently against Ferdinand. Ferdinand was also frequently engaged in hostilities with the nascent Portuguese kingdom but came successfully to the rescue of the Portuguese when the Almohads invested the key city of Santarém (1184).

Alfonso VIII, byname EL DE LAS NAVAS (Spanish: He of Las Navas) (b. 1155--d. Oct. 6, 1214, Burgos, Castile), king of Castile from 1158, son of Sancho III, whom he succeeded when threeyears old.

Before Alfonso came of age his reign was troubled by internal strife and the intervention of the kingdom of Navarre in Castilian affairs. Throughout his reign he maintained a close alliance with the kingdom of Aragon, and in 1179 he concluded the Pact of Cazorla, which settled the future line of demarcation between Castile and Aragon when the reconquest of Moorish Spain was completed. From 1172 to 1212 he was engaged in resistance to the Moorish Almohad invaders, who defeated him in 1195. In the same year the kings of Leon and Navarre invaded Castile, but Alfonso defeated them with the aid of King Peter II of Aragon. In 1212 Alfonso secured a great victory at Las Navas de Tolosa over the Almohad sultan and thereby broke Almohad power in Spain.

Alfonso VIII (1155-1214), king of Castile (1158-1214); he succeeded to the throne on the death of his father, Sancho III (circa 1134-58). Troubled by interference from Navarre in his youth, he later allied Castile with Aragón, forming a connection that was eventually to become the basis for the unification

of Spain. He also established Castilian dominance over León. In 1170 he married Eleanor (died 1214), daughter of King Henry II of England. From the 1170s, he resisted encroachments by the Almohads, Muslim invaders from northern Africa. Defeated by the Muslim caliph Yakub al-Mansur (circa 1160-99) at Alarcos in 1195, Alfonso and his allies won a major victory over the Muslim commander al-Nasir (1158-1225) at Navas de Tolosa in 1212.

Notes for Blanca de Castilla (Reina de Francia):
Blanche OF CASTILE, French BLANCHE DE CASTILLE, Spanish BLANCA DE CASTILLA (b. 1188, Palencia, Castile [Spain]--d. Nov. 12, 1252, Paris, France), wife of Louis VIII of France, mother of Louis IX (St. Louis), and twice regent of France (1226-34, 1248-52), who by wars and marital alliances did much to secure and unify French territories.

Blanche was the daughter of Alfonso VIII of Castile and Eleanor, who was the daughter of Henry II of England. Her grandmother Eleanor of Aquitaine, queen of England, traveled to Spain to take the 11-year-old Blanche to France, where a marriage treaty was concluded with Louis, the young son of King Philip II Augustus. This politically motivated marriage had been arranged by Blanche's uncle, King John of England, and was celebrated in 1200 at Portsmouth, Hampshire. It represented only a brief truce in the struggle between England and France for control over certain French territories.

Blanche, who became French through marriage, was gradually to become French in spirit as well. Although she did not cease to be concerned for her family, among them her uncle John and his allies, her brother-in-law Ferrand of Portugal, and her cousin Otto of Brunswick (later Holy Roman emperor Otto IV), she rejoiced at the French victory over Otto and the English at Bouvines in 1214, marking the first stage of French unification, a goal for which she was constantly to strive. In the same year, she gave birth to Louis, the future king of France. Upon John of England's death, Blanche boldly tried to seize the English throne: in 1216 Louis of France invaded England on her behalf. The English stood firm against him, and John's nine-year-old son was finally crowned Henry III.

A devout Roman Catholic, Blanche soon became involved in what she sincerely believed to be a holy war against the heretical Cathari, a sect founded on the belief that good and evil had two separate creators, which was flourishing throughout southern France. Her husband, who became Louis VIII in 1223, took part in a crusade against the Cathari but suffered a fatal attack of dysentery
upon returning to the north of France in 1226. In accordance with her husband's will, Blanche became both guardian of the 12-year-old Louis and regent of France. She zealously pressed to have Louis crowned immediately, and the coronation took place at Reims three weeks after Louis VIII's death.

Her most pressing problem was to deal with a rebellion of the great barons, organized by Philip Hurepel, the illegitimate son of King Philip II Augustus, and supported by King Henry III of England. In the face of such adversity, Blanche showed herself by turns a delicate diplomat, a clever negotiator, and a strong leader. Dressed in white, on a white palfrey draped in the same colour, she
rode into battle at the head of her troops. After an attempted abduction of the young king, Blanche did not hesitate to replace rebel noble associates with commoners if she thought it necessary. She also created local militias. Blanche was gradually able to subdue the revolt, establish a new truce with England, and, in 1229, pacify the south of France by signing the Treaty of Paris with Raymond VII, count of Toulouse. France then entered an era of domestic stability, which saw the construction of many cathedrals throughout the country.

On only one occasion did Blanche fail to exhibit diplomatic conduct. In 1229 a dispute between an innkeeper and some students took place in the Latin Quarter in Paris. The police were summoned, and the students were beaten and thrown into the Seine; such intervention in the Latin Quarter, however, was

contrary to the prerogatives granted to the university, and the faculty and students
threatened to strike if the university's privileges were not respected. Badly advised, Blanche held firm, but the university closed its doors, and the faculty and students left Paris for the provinces and abroad. It was to take four years and the intervention of the pope before the university would return to Paris with new prerogatives, this time granted by Blanche herself.

Although Louis IX came of age on April 25, 1236, Blanche remained at his side as his most loyal and steadfast supporter. She lacked tact, however, with regard to her son's private life. Although Blanche herself had selected Margaret of Provence to be Louis's wife, she treated Margaret with considerable severity. In 1244, after Louis recovered from a serious illness, he and his wife,
much against Blanche's wishes, made a vow to go on a crusade against the Muslims. They embarked in 1248, and once again the kingdom was entrusted to Blanche. Informed of Louis's defeat at Al-Mansurah, Egypt, and his subsequent imprisonment, Blanche herself went to seek his ransom and that of the French army. She petitioned her parents, her allies, and the pope for funds and supplies, but interest in the crusade had dwindled.

Although weakened by a heart ailment, Blanche did not neglect her obligations as a regent. Continuing to preside over council meetings, she signed laws and watched over the poor of Paris. When some of the poor were mistreated by the cathedral chapter, she herself rode, as formerly, to open the gates to their prison. On her way to the Abbey of the Lys, one of her favourite retreats, Blanche suffered an attack of the heart ailment that was to take her life. She was returned to the palace of the Louvre, dressed in a nun's habit, and laid on a bed of hay. There, after begging forgiveness of all and having received the last sacraments, she died. She was buried at Maubuisson Abbey and her heart taken to the Abbey of the Lys. Louis IX was in Jaffa when he learned of his mother's death. The news distressed him greatly, for he was aware that he had lost not only an
incomparable parent but also the strongest supporter of his kingship.

Notes for Luis VIII (Rey de Francia):
Louis VIII, byname LOUIS THE LION, or THE LION-HEART, French LOUIS LE LION, or LOUIS COEUR-DE-LION (b. Sept. 5, 1187, Paris--d. Nov. 8, 1226, Montpensier, Auvergne, Fr.), Capetian king of France from 1223 who spent most of his short reign establishing royal power in Poitou and Languedoc.

On May 23, 1200, Louis married Blanche of Castile, daughter of Alfonso VIII of Castile, who effectively acted as regent after Louis's death. In 1212 Louis seized Saint-Omer and Aire to prevent a powerful Flanders from being on the flank of his county of Artois. In 1216, after the barons rebelling against King John of England had offered the English throne to Louis in return for his aid, Louis went to England to aid the rebels. Initially he was successful, but eventually he was
defeated at sea and suffered defections. In 1217, when peace was concluded at Kingston, Louis was secretly paid 10,000 marks. In 1224, now king, he seized Poitou and, in 1226, he launched a successful crusade against the Albigensian heretics, capturing the major fortress of Avignon before returning toward Paris because of illness.

Louis was the first Capetian to grant appanages on a large scale and to have a reversion clause that made alienation of royal property more difficult. Louis also developed other particular rights for the kingship, such as the concept that fealty was sworn not only to the individual king but also to the kingship. His eldest son, Louis IX (afterward St. Louis), peacefully succeeded him while his other sons received appanages.

Louis VIII (1187-1226), king of France (1223-26), son and successor of Philip II (Philip Augustus), born in Paris. Before his succession he assisted his father in several campaigns to win control of French territories belong to John, the Angevin, or Plantagenet, king of England. Philip II previously had conspired with John against John's brother, King Richard I of England, but later turned against him. In 1215 Louis was offered the crown of England by a group of barons in rebellion against King John; Louis led an expedition to England but was unsuccessful in claiming the throne; John died in the midst of the struggle and was succeeded by his son Henry III. The French invaders were excommunicated by the papal legate in England and were defeated in battle at Lincoln. Louis returned to France in 1217 and there took part in crusades against a dissident religious sect called the Albigenses, or Cathars. After succeeding his father as king, Louis continued Philip's policy of destroying the power of the Plantagenets in France and bringing under royal authority the provinces held by the Albigenses in the south of France. He was succeeded by his son Louis IX.

Notes for Alfonso X el Sabio (Rey de Castilla y León):
ALFONSO X EL SABIO REY DE CASTILLA Y LEON
(Toledo, 1221-Sevilla, 1284). Rey de Castilla y León. Ademis de realizar grandes avances en la Reconquista, este monarca mantuvo activas relaciones con los demis reinos cristianos de la Penknsula e intervino en la polktica europea. El sobrenombre de el Sabio procede del gran impulso que dio a la ciencia y la cultura. Hijo de Fernando III y Beatriz de Suabia, siendo todavka infante conquistó el reino musulmin de Murcia, del que tomó posesión en 1244 en nombre de su padre. Ello fue posible gracias al tratado de Almizra, que acordó con Jaime I de Aragón ese mismo ano. Con el fin de estrechar los lazos entre ambas coronas, casó con Violante, hija del monarca aragonés, lo que le permitió proseguir la Reconquista sin preocuparse por las rivalidades dinisticas. Una vez instalado en el trono (1252), dedicó todos sus esfuerzos a la conquista de Andalucka: ocupó Jerez, Lebrija, Medina Sidonia, Arcos, Niebla y Cidiz. No

obstante, tales avances no redundaron en favor de la corona, sino de la nobleza, a la que Alfonso X concedió enormes beneficios territoriales y jurisdiccionales. Fue el primer monarca castellano que se preocupó de tener una presencia en Europa. Ask, a la muerte de Guillermo de Holanda (1257), pretendió ser elegido para la dignidad imperial alegando el parentesco de su madre con los Staufen alemanes, pero no consiguió su propósito a causa de la hostilidad del Papado y de Francia, y también por la oposición de muchos nobles castellanos, que vekan en ello una sangrka de los recursos que debkan dedicarse a la Reconquista. Preocupado por la difusión de la cultura y empenado en una vasta labor legislativa, patrocinó la traducción del irabe al castellano de numerosas obras de caricter cientkfico (como El libro del saber de astronomka, que incluka las llamadas Tablas alfonskes), e impulsó la redacción del Fuero Real (recopilación de la tradición jurkdica castellana) y, sobre todo, de las Siete Partidas. A él se deben también la Crónica general y la General e grande estoria, que suponen sendos intentos de establecer una historia de Espana y una historia universal, respectivamente. Las dotes de escritor del monarca se reflejaron en la poeska en lengua gallega, en especial en sus Cantigas a Santa Marka, conjunto de 420 canciones en alabanza de la Virgen. Los sltimos anos del reinado de Alfonso X se vieron ensombrecidos por el enfrentamiento, por motivos sucesorios, entre el rey y su segundo hijo, el futuro Sancho IV. Éste contaba con el apoyo de la nobleza y las ciudades, mientras que el monarca se inclinaba por los hijos de su primogénito Fernando de la Cerda, fallecido en 1275. El pleito dinistico se convirtió pronto en guerra civil, en la que cada bando buscó aliados en el exterior. En 1282 Sancho consiguió deponer a su padre, que hubo de retirarse a Sevilla.

Alfonso X, byname ALFONSO THE WISE, Spanish ALFONSO EL SABIO (b. Nov. 23, 1221, Burgos, Castile--d. April 4, 1284, Seville), king of Castile and Leon from 1252 to 1284.

His father, Ferdinand III, conquered Andalusia and imposed tribute on the remaining Muslim states in Spain--Murcia and Granada. His mother, Beatrice, was granddaughter of the Holy Roman emperor Frederick I. Alfonso, already known as a scholar, became king in 1252. He had many scholars in his travelling court, and he was an active participant in their writing and editing. Some were experts on Roman law, which Alfonso hoped to make the basis of a uniform code for his lands. The court, gifts to friends, and foreign intrigue proved expensive, and Alfonso taxed heavily.

Alfonso crushed a Muslim revolt in 1252, and a revolt by nobles in 1254. Morocco, Granada, and Murcia invaded in 1264, but Alfonso won with Aragonese help, and annexed Murcia. In 1272, a revolt, and withdrawal to Granada, by nobles forced him to confirm local privileges.

In 1273 Alfonso founded, and granted privileges to, the Mesta, a guild of migratory shepherds.

Alfonso claimed many foreign titles, notably that of Holy Roman emperor in 1256. In 1257, bribes won him four electoral votes for emperor to three for Richard of Cornwall, but Richard, unlike Alfonso, could go to Germany. In 1275 Richard died, and Alfonso went to France to appeal to Pope Gregory X, who persuaded him to renounce his claim.

While Alfonso was in France, Morocco and Granada invaded Castile. Ferdinand, Alfonso's eldest son, was killed in the fighting. Sancho, Alfonso's second son, became a hero in defeating the invaders, and proclaimed himself heir, disregarding Ferdinand's sons, who were nephews of the French king. Alfonso recognized Sancho's claim in 1278, but, under French pressure, became
ambiguous in 1281. Taking advantage of grievances against Alfonso, Sancho declared himself regent. Towns and nobles rose against Alfonso, who had to take refuge in Seville. Some of Sancho's followers deserted, but, after Alfonso died, Sancho took Seville and became King Sancho IV.

Alfonso's court scholars wrote mostly in Castilian Spanish, which they made a literary language by regularizing the syntax and by borrowing --and defining- words for concepts not previously discussed. In their Premera crónica general, they tried to determine historical facts from chronicle, folklore, and Arabic sources. Less factual was their Gran e general estoria, a world history, with extensive translations from the Old Testament. The Tablas Alfonskes were planetary tables, based on an Arabic source but updated by observations at Toledo 1262-72. Siete partidas was the most important law code. It was based on Roman law, and contained discourses on manners and morals, and an idea of the king and his people as a corporation--superior to feudal arrangements--with the king as agent of both God and the people. After Alfonso's death, Siete partidas was proclaimed the law of all Castile and Leon in 1348, and the language of Alfonso's court evolved into modern Castilian Spanish.

Notes for Pedro III El Grande (Rey de Aragón y Sicilia):
Pedro III El Grande (? - 1285) tomó el trono de Aragón en1276 y el de Sicilia en 1282. Esposo de la princesa Constanza de Suabia, pudo ascender al trono siciliano. Derrotó a la flota de Francia. Promovió la literatura en idioma catalin. Sus grandes obras le merecieron el nombre de "Pedro el Grande".

Peter III, byname PETER THE GREAT, Spanish PEDRO EL GRANDE (b. 1239--d. Nov. 11, 1285, Villafranca del Panades, Catalonia), king of Aragon from July 1276, on the death of his father, James I, and king of Sicily (as Peter I) from 1282.

In 1262 he had married Constance, heiress of Manfred, the Hohenstaufen king of Sicily; and after the revolt of the Sicilians in 1282 he invaded the island and was proclaimed king at Palermo, despite strong Guelph and papal opposition (see Sicilian Vespers). His Sicilian enterprise was unpopular in Aragon, where an association of nobles and some municipalities, the Unión Aragonesa, forced him to grant a privilege not only confirming the Aragonese fueros (legal rights) but diminishing some of the crown's rights. In 1285 Philip III of France invaded Aragon to dethrone Peter but was disastrously defeated. Peter, however, soon died. His great stature and physical strength were famous. Among his children were Alfonso III of Aragon, James I of Sicily (II of Aragon), andFrederick III of Sicily.

Notes for Pedro Ponce de Cabrera:
La familia y linaje de los Ponce de León procede, segsn reproduce el conocido tratadista don Francisco Piferrer, otorgindole el dato a Ocariz, de los Ponces, una familia patricia de Roma conocida desde el ano 325 antes de J. C.

Por el contrario, Rivarola, no sólo no sostiene esta versión, sino que la contradice categóricamente, al afirmar que la genealogka de los Ponce de León comienza por Torsón, Conde Tolosa de Francia, Senor de la Galia Narbolense, que floreció a fines del siglo XIII.

Esto es lo que escribe en su conocida obra "Monarquka Espanola": Un descendiente de Torsón, llamado Ponce, Conde de Tribol y Senor del Castillo de Minerva, cerca de Tolosa (Tolouse, Francia), vino a Espana con ocasión del matrimonio de su tko Ramón, noveno Conde de Tolosa, con la infanta dona Elvira, hija del rey don Alonso Enriquez y fue bien heredado en el reino de León donde todavka existe la torre de los Ponces.

El conde Ponce, descendiente del personaje anteriormente citado, casó con dona Aldonza Alonso, hija de don Alonso, rey de León, por lo cual sus hijos don Fernin Pérez Ponce y don Rui Pérez Ponce tomaron por armas un león en campo de plata y a su patronkmico Ponce, anadieron "de León".

Con respecto a lo anterior hay que aclarar que Pérez equivale a hijo de Pedro de modo que Pérez Ponce equivale a "hijo de Pedro Ponce".

Para todos los datos que venimos consignando estamos siguiendo la información del ya citado Francisco Piferrer.

Mis tarde, otro descendiente de este linaje, llamado también Pedro, Senor de Marchena, casó con Dona Beatriz de Jérica Urrea, descendiente del rey don Jaime de Aragón y de la casa de Vidaurre, una de las doce casas nobles de Navarra, cuyas armas son; faja azur en campo de oro; por lo cual, los descendientes de don Pedro Ponce de León y dona Beatriz, anadieron a sus armas las de Aragón y en bordura, las de Vidaurre.

En fin, este linaje tiene tal nobleza que segsn la apreciación de Piferrer, pocas casas hay en Espana que no se vanaglorien de contar entre sus preclaros ascendientes a algsn Ponce de León.

Notes for Felipe de Suabia (Emperador Germinico):
Philip, also called PHILIP OF SWABIA, German PHILIPP VON SCHWABEN (b. 1178--d. June 21, 1208, Bamberg, Ger.), German Hohenstaufen king whose rivalry for the crown involved him in a decade of warfare with the Welf Otto IV.

The youngest son of the Holy Roman emperor Frederick I Barbarossa, Philip was destined for the church. After being provost of the cathedral at Aachen, he was, in 1190 or 1191, elected bishop of Würzburg. Shortly after the death of his brother Frederick (1191), however, he abandoned his ecclesiastical career.

Another brother, the Holy Roman emperor Henry VI, made him duke of Tuscany in 1195 and duke of Swabia in 1196. In May 1197 he married Irene, daughter of the
Byzantine emperor Isaac II Angelus.

At Henry VI's death in September 1197, his son, the future emperor Frederick II, was less than three years old, and the German princes were unwilling to accept him as king. The princes favourable to the Hohenstaufens elected Philip German king in March 1198. The opposing party, led by Archbishop Adolf of Cologne, elected Otto, a son of Henry the Lion of Brunswick of the rival Welf dynasty, king in June of that year. Otto was crowned at Aachen, the proper place for the ceremony, by Archbishop Adolf. Philip's coronation, by another prelate, did not take place until September 1198 at Mainz.

In the ensuing civil war the Hohenstaufen cause prospered at first. In 1201, however, Pope Innocent III recognized Otto as king and excommunicated Philip. Philip's fortunes were only restored in 1204, by a series of defections from Otto's side, culminating in that of Adolf of Cologne himself. In June 1205, Adolf crowned Philip at Aachen.

The city of Cologne, which, notwithstanding its archbishop, had sided with Otto, was captured in January 1207, and Otto's cause seemed lost. Late in 1207, however, when Philip offered to give Otto one of his daughters in marriage and to enfeoff him with either the duchy of Swabia or the kingdom of Arles, Otto, buoyed by hopes of financial, if not military, support from the kings of England and Denmark, rejected the offer. Nevertheless, a truce was arranged that lasted until June of the following year.

In 1208 Pope Innocent III recognized Philip as king and promised to crown him emperor. Philip, who had mobilized his army at Bamberg in order to move against Otto, was waiting for the truce to expire when he was murdered by Otto of Wittelsbach, count Palatine of Bavaria, to whom he had refused to give one of his daughters in marriage. Eventually his daughters were married: Beatrix the Elder to his old rival Otto, Cunigunda to King Wenceslas of Bohemia, and Beatrix the Younger to Ferdinand III of Castile.

A brave man, Philip was praised by contemporaries for his mildness and generosity. The diversion of the Fourth Crusade to Constantinople is assumed by some authorities to have been prompted by him in the interests of his brother-in-law, the Byzantine emperor Alexius IV Angelus.

Urraca (b. 1077-81--d. March 8, 1126, Saldana, Castile [Spain]), queen of Leon and Castile from 1109 to 1126, daughter of Alfonso VI.

Urraca became her father's heiress when her brother, Sancho, was killed at Uclés (1108). She was the widow of Count Raymond of Burgundy, by whom she had had one son, Alfonso Ramírez (born 1104), the future Alfonso VII. To counterbalance--it was hoped--the dangers of a female succession during the Almoravid crisis, Urraca's marriage to her second cousin, Alfonso I of Aragon, was arranged (1109). This marriage, instead of producing political stability in Urraca's kingdom, led to years of anarchy. Urraca and her husband, according to the marriage settlement, became corulers in each other's lands, and Alfonso thereupon put Aragonese garrisons into many Leonese and Castilian cities. The notion of an Aragonese-Castilian political union was, however,
premature, and although Urraca's municipalities tended to accept the Aragonese king, the magnates were hostile. Civil war broke out and continued for years, many supporting the claims of the child Alfonso Ramírez to the throne. Matters were further complicated by the temperamental incompatibility of Urraca and her husband, who soon quarreled. Pope Paschal II, moreover, declared their marriage canonically invalid. They finally separated in 1114, though the Aragonese king continued for some years thereafter to keep his garrisons in Castile and to use the royal title.

Struggles also continued between nobles and municipalities, between rival bands of magnates, between the archbishops of Santiago and Toledo, and between the former, the bishop Diego Gelmírez, and Urraca herself. Alfonso Ramírez was crowned by Gelmírez in 1111, and his reign in Galicia began effectively--despite Urraca's intermittent but active opposition--in 1116. Urraca's
death in 1126 ended a disastrous episode in the medieval political history of Christian Spain.

Notes for Alfonso VII Emperador (Rey de Castilla y León):
Alfonso VII, byname ALFONSO THE EMPEROR, Spanish ALFONSO EL EMPERADOR (b.1104?--d. August 1157, Fresneda, Castile), king of Leon and Castile from 1126 to 1157, son of Raymond of Burgundy and the grandson of Alfonso VI, whose imperial title he assumed. Though his reign saw the apogee of the imperial idea in medieval Spain and though he won notable victories against the Moors, he remains a somewhat hazy figure.

His childhood was complicated by the struggle between his mother Urraca and her second husband, Alfonso I of Aragon, for control of Castile and Leon. Only on Urraca's death (1126) did his stepfather finally relinquish his claims. Alfonso was then formally accepted as emperor by the kings of Aragon and Pamplona (Navarre), by the count of Barcelona, and by various Hispano-Moorish rulers. His capture of Almerka (1147) from the Moors won him renown, as did other victories, but in the end these led to little expansion of territory. Almerka was lost again in 1157 and Córdoba remained in his hands for only three years. In 1146 a new invasion of North African fanatics, the Almohads, began. Alfonso now allied himself with the Almoravids and devoted the rest of his life to a series of campaigns to check Almohad expansion in southern Spain.

Despite the importance of the imperial idea at this time, peninsular fractionalist tendencies were by no means dormant. Alfonso was unable to prevent the establishment of Portugal as an independent kingdom (1140) and, in his will, he himself divided his realm, as was the Spanish custom, between his two sons, Sancho III of Castile and Ferdinand II of Leon. This act finally destroyed the concept of empire in medieval Spain.

The rise of Castile and Aragon.

Alfonso VII subverted the idea of a Leonese empire and its implied aspiration to dominion over a unified peninsula by the division of his kingdoms between his sons; Sancho III (1157-58) received Castile and Ferdinand II (1157-88) obtained León. While the Christians remained on the defensive in the face of Almohad power, Alfonso VIII of Castile (1158-1214) and Alfonso II of Aragon expressed their confidence in the future by concluding a treaty in 1179 apportioning the
conquest of Islamic Spain between them. Castile retained the right of reconquest to Andalusia and Murcia (Mursiyah), while Aragon claimed Valencia. Nevertheless, Alfonso VIII's efforts to dominate the other Christian rulers provoked contention and warfare and thwarted concerted effort against the Almohads. Thus, in 1195 the king of Castile suffered a disastrous defeat by the

Almohads at Alarcos (Al-Arak), south of Toledo. The other Christian monarchs, acknowledging that the Almohads threatened them all, came to terms with Castile. With the collaboration of Sancho VII of Navarre (1194-1234) and Peter II of Aragon (1196-1213) and Portuguese and Leonese troops, Alfonso VIII in 1212 triumphed over the Almohads at Las Navas de Tolosa (Al-'Iqab). That extraordinary victory marked the beginning of the end of the Almohad empire and
opened the gates of Andalusia to the Christians.

While the kings of Aragon took an active role in the Reconquest, as counts of Barcelona they also had important relationships in southern France, where several lords were their vassals. When Pope Innocent III proclaimed a crusade to check the spread of the Albigensian heresy throughout that area, Peter II, though no friend of heretics, realized that his feudal rights and interests there were endangered by the arrival of northern French knights. In 1213 Peter was defeated and killed by the crusading army at Muret after he went to the aid of his brother-in-law, the count of Toulouse. In the generation after his death, Catalan ambition and power were steadily curtailed in southern France.

As the Almohad empire fell apart in the second quarter of the 13th century, the Christian rulers effected the reconquest of almost all of Spain. James I of Aragon (1213-76) for the first time utilized Catalan naval power in 1229 to conquer the kingdom of Majorca (Mayurqah), the first significant step in Catalan expansion in the Mediterranean. The subjugation of the kingdom of Valencia was more difficult, especially as James was diverted temporarily by the expectation of acquiring Navarre. When Sancho VII died without children, the people of Navarre accepted his nephew, count Theobald of Champagne (1234-53), as their king. From then on French interest in Navarre steadily increased. Forced to give up his aspirations there, James I resumed the war against the Muslims and captured Valencia in 1238. Thousands of Muslims were now brought under his rule.

Meantime, Alfonso IX of León (1188-1230) was driving southward to the Guadiana River (Wadi Ana). By capturing Mérida (Maridah) and Badajoz in 1230, he cleared the way to Seville. When he died, his son Ferdinand III, already king of Castile (1217-52) by reason of inheritance from his mother, Berenguela, a daughter of Alfonso VIII, succeeded him as king of León. Henceforth Castile and León were permanently united. Using their combined resources, Ferdinand
conquered Cordova in 1236, Murcia in 1243, Jaén (Jayyan) in 1246, and Seville in 1248. The Muslims retained only the kingdom of Granada, whose rulers were obliged to pay an annual tribute to Castile. As a vassal kingdom, Granada by itself was not a threat, but, when supported by the Muslims of Morocco, this last outpost of Islamic power in Spain caused great difficulty for the Christians.

Sancho VI, byname SANCHO THE WISE, Spanish SANCHO EL SABIO (d. June 27, 1194), king of Navarre (Pamplona) from 1150 and son of García IV (or V) the Restorer.

Sancho was the first to be called king of Navarre; previous kings were known as kings of Pamplona. In 1151 Castile and Aragon

signed at Tudillén a treaty for the partition of Navarre. By skilled diplomacy Sancho avoided the destruction of his kingdom, accepting Alfonso VII of Castile as his overlord and marrying Alfonso's daughter. He himself intervened in Castilian affairs during the minority (1158-70) of Alfonso VIII. In 1176 both countries submitted their longstanding territorial disputes to Henry II of England as arbiter, who assigned Rioja to Castile. Sancho accepted this decision. He was a legislator of importance, conceding many municipal fueros (charters) and protecting Jews and immigrants (francos) from the north.

Afonso I, also called AFONSO HENRIQUES, byname AFONSO THE CONQUEROR, Portuguese AFONSO O CONQUISTADOR (b. 1109/11, Guimarces, Port.--d. Alfonso VI, emperor of Leon, had granted the county of Portugal to Afonso's father, Henry of Burgundy, who successfully defended it against the Muslims (1095-1112). Henry married Alfonso VI's illegitimate daughter, Teresa, who governed Portugal from the time of her husband's death (1112) until her son Afonso came of age. She refused to cede her power to Afonso, but his party prevailed in the Battle of Sco Mamede, near Guimarces (1128). Though at first obliged as a vassal to submit to his cousin Alfonso VII of Leon, Afonso assumed the title of king in 1139.

By victory in the Battle of Ourique (1139) he was able to impose tribute on his Muslim neighbours; and in 1147 he further captured Santarém and, availing himself of the services of passing crusaders, successfully laid siege to Lisbon. He carried his frontiers beyond the Tagus River, annexing Beja in 1162 and Évora in 1165; in attacking Badajoz, he was taken prisoner but then released. He married Mafalda of Savoy and associated his son, Sancho I, with his power. By
the time of his death he had created a stable and independent monarchy.

Sancho's reign was marked by a resettlement of the depopulated areas of his country, by the establishment of new towns, and by the rebuilding of frontier strongholds and castles. To facilitate his plans, he encouraged foreign settlers and enlisted bishops, religious orders, and nobles in his colonization projects, granting vast territories to the military orders (the Hospitalers, the Templars,
the Orders of Calatrava and Santiago). After an invasion by the Almohad prince Abu Yusuf Ya'qub al- Mansur, Sancho used the help of a passing crusader fleet to capture Silves from the Moors (1189), but lost it (1191) and other lands south of the Tagus River when al-Mansur again attacked. Sancho quarreled both with his bishops and with Rome over the payment of tribute.

Notes for Enrique II (Rey de Inglaterra):
Henry II, byname HENRY OF ANJOU, HENRY PLANTAGENET, HENRY FITZEMPRESS, or HENRY CURTMANTLE (Short Mantle) (b. 1133, Le Mans, Maine--d. July 6, 1189, near Tours), duke of Normandy (from 1150), count of Anjou (from 1151), duke of Aquitaine (from 1152), and king of England (from 1154), who greatly expanded his Anglo-French domains and strengthened the royal administration in England. His quarrels with Thomas Becket, archbishop of Canterbury, and with members of his family (his wife, Eleanor of Aquitaine, and such sons as Richard the Lion-Heart and John Lackland) ultimately brought about his defeat.

Early life.

After receiving a good literary education, part of it in England, Henry became duke of Normandy in 1150 and count of Anjou on the death of his father, Geoffrey Plantagenet, in 1151. Although the claim of his mother, Matilda, daughter of Henry I, to the English crown had been set aside by her cousin, King Stephen, in 1152, Henry advanced his fortunes by marrying the beautiful and talented
Eleanor, recently divorced from King Louis VII of France, who brought with her hand the lordship of Aquitaine. Henry invaded England in 1153, and King Stephen agreed to accept him as coadjutor and heir. When Stephen died the following year Henry succeeded without opposition, thus becoming lord of territories stretching from Scotland to the Pyrenees.

The young king lacked visible majesty. Of stocky build, with freckled face, close-cut tawny hair, and gray eyes, he dressed carelessly and grew to be bulky; but his personality commanded attention and drew men to his service. He could be a good companion, with ready repartee in a jostling crowd, but he displayed at times the ungovernable temper of a furious animal and could be heartless and ruthless when necessary. Restless, impetuous, always on the move, regardless of the convenience of others, he was at ease with scholars, and his administrative decrees were the work of a cool realist. In his long reign of 34 years he spent an aggregate of only 14 in England.

Reign.

His career may be considered in three aspects: the defense and enlargement of his dominions, the involvement in two lengthy and disastrous personal quarrels, and his lasting administrative and judicial reforms.

His territories are often called the Angevin Empire. This is a misnomer, for Henry's sovereignty rested upon various titles, and there was no institutional or legal bond between different regions. Some, indeed, were under the feudal overlordship of the king of France. By conquest, through diplomacy, and through the marriages of two of his sons, he gained acknowledged possession

of what is now the west of France from the northernmost part of Normandy to the
Pyrenees, near Carcassonne. During his reign, the dynastic marriages of three daughters gave him political influence in Germany, Castile, and Sicily. His continental dominions brought him into contact with Louis VII of France, the German emperor Frederick I (Barbarossa), and, for much of the reign, Pope Alexander III. With Louis the relationship was ambiguous. Henry had taken Louis's former wife and her rich heritage. He subsequently acquired the Vexin in Normandy by the premature marriage of his son Henry to Louis's daughter, and during much of his reign he was attempting to outfight or outwit the French king, who, for his part, gave shelter and comfort to Henry's enemy, Thomas Becket, the archbishop of Canterbury. The feud with Louis implied friendly relations with Germany, where Henry was helped by his mother's first marriage to the emperor Henry V but hindered by Frederick's maintenance of an antipope, the outcome of a disputed papal election in 1159. Louis supported Alexander III, whose case was strong, and Henry became arbiter of European opinion. Though acknowledging Alexander, he continued throughout the Becket controversy to threaten transference of allegiance to Frederick's antipope, thus impeding Alexander's freedom of action.

Early in his reign Henry obtained from Malcolm III of Scotland homage and the restoration of Northumberland, Cumberland, and Westmorland, and later in the reign (1174) homage was exacted from William the Lion, Malcolm's brother and successor. In 1157 Henry invaded Wales and received homage, though without conquest. In Ireland, reputedly bestowed upon him by Pope Adrian IV, Henry allowed an expedition of barons from South Wales to establish Anglo-Norman supremacy in Leinster (1169), which the King himself extended in 1171.

His remarkable achievements were impaired, however, by the stresses caused by a dispute with Becket and by discords in his own family.

The quarrel with Becket, Henry's trusted and successful chancellor (1154-62), broke out soon after Becket's election to the archbishopric of Canterbury (May 1162; see Becket, Saint Thomas). It led to a complete severance of relations and to the Archbishop's voluntary exile. Besides disrupting the public life of the church, this situation embroiled Henry with Louis VII and Alexander III; and, though it seemingly did little to hamper Henry's activities, the time and service spent in negotiations and embassies was considerable, and the tragic denouement in Becket's murder earned for Henry a good deal of damaging opprobrium.

More dangerous were the domestic quarrels, which thwarted Henry's plans and even endangered his life and which finally brought him down in sorrow and shame.

Throughout his adult life Henry's sexual morality was lax; but his relations with Eleanor, 11 years his senior, were for long tolerably harmonious, and, between 1153 and 1167, she bore him eight children. Of these, the four sons who survived infancy--Henry, Geoffrey, Richard, and John--repaid his genuine affection with resentment toward their father and discord among themselves.

None was blameless, but the cause of the quarrels was principally Henry's policy of dividing his dominions among his sons while reserving real authority for himself. In 1170 he crowned his eldest son, Henry, as co-regent with himself; but in fact the young king had no powers and resented his nonentity, and in 1173 he opposed his father's proposal to find territories for the favoured John
(Lackland) at the expense of Geoffrey. Richard joined the protest of the others and was supported by Eleanor. There was a general revolt of the baronage in England and Normandy, supported by Louis VII in France and William the Lion in Scotland. Henry's prestige was at a low ebb after the murder of Becket and recent taxation, but he reacted energetically, settled matters in Normandy and Brittany, and crossed to England, where fighting had continued for a year. On July 12, 1174, he did public penance at Canterbury. The next day the King of Scots was taken at Alnwick, and three weeks later Henry had suppressed the rebellion in England. His sons were pardoned, but Eleanor was kept in custody until her husband died.

A second rebellion flared up in 1181 with a quarrel between his sons Henry and Richard over the government of Aquitaine, but young Henry died in 1183. In 1184 Richard quarrelled with John, who had been ordered to take Aquitaine off his hands. Matters were eased by the death of Geoffrey (1186), but the King's attempt to find an inheritance for John led to a coalition against him of Richard and the young Philip II Augustus, who had succeeded his father, Louis VII, as king of France. Henry was defeated and forced to give way, and news that John also had joined his enemies hastened the King's death near Tours in 1189.

In striking contrast to the checkered pattern of Henry's wars and schemes, his governance of England displays a careful and successful adaptation of means to a single end--the control of a realm served by the best administration in Europe. This success was obscured for contemporaries and later historians by the varied and often dramatic interest of political and personal events, and not until
the 19th century--when the study of the public records began and when legal history was illuminated by the British jurist Frederic William Maitland and his followers--did the administrative genius of Henry and his servants appear in its true light.

At the beginning of his reign Henry found England in disorder, with royal authority ruined by civil war and the violence of feudal magnates. His first task was to crush the unruly elements and restore firm government, using the existing institutions of government, with which the Anglo-Norman monarchy was well provided. Among these was the King's council of barons, with its inner group of ministers who were both judges and accountants and who sat at the Exchequer, into which the taxes and dues of the shires were paid by the King's local representative, the sheriff (shire-reeve). The council contained an unusually able group of men--some of them were great barons, such as Richard de Lucy and Robert de Beaumont, earl of Leicester; others included civil servants, such as Nigel, bishop of Ely, Richard Fitzneale, and his son, Richard of Ilchester. Henry took a personal interest in the technique of the Exchequer, which was described at length for posterity in the celebrated Dialogus de

scaccario, whose composition seemed to Maitland "one of the most wonderful things of Henry's wonderful reign." How far these royal servants were responsible for the innovations of the reign cannot be known, though the development in practice continued steadily, even during the King's long absences abroad.

In the early months of the reign the King, using his energetic and versatile chancellor Becket, beat down the recalcitrant barons and their castles and began to restore order to the country and to the various forms of justice. It was thus, a few years later, that he came into conflict with the bishops, then led by Becket, over the alleged right of clerics to be tried for crime by an ecclesiastical court. A result of this was the celebrated collection of decrees--the Constitutions of Clarendon (1164)--which professed to reassert the ancestral rights of the King over the church in such matters as clerical immunity, appointment of bishops, custody of vacant sees, excommunication, and appeals to Rome. The Archbishop, after an initial compliance, refused to accept these, and they were throughout the controversy a block to an agreement. The quarrel touched what was to be the King's chief concern--the country's judicial system.

Anglo-Saxon England had two courts of justice--that of the hundred, a division of the shire, for petty offenses, and that of the shire, presided over by the sheriff. The feudal regime introduced by the Normans added courts of the manor and of the honour (a complex of estates). Above all stood the royal right to set up courts for important pleas and to hear, either in person or through his ministers, any appeal. Arrest was a local responsibility, usually hard upon a flagrant crime. A doubt of guilt was settled by ordeal by battle; the accused in the shire underwent tests held to reveal God's judgment. Two developments had come in since William the Conqueror's day: the occasional mission of royal justices into the shires and the occasional use of a jury of local notables as fact finders in cases of land tenure.

Henry's first comprehensive program was the Assize of Clarendon (1166), in which the procedure of criminal justice was established; 12 "lawful" men of every hundred, and four of every village, acting as a "jury of presentment," were bound to declare on oath whether any local man was a robber or murderer. Trial of those accused was reserved to the King's justices, and prisons for those awaiting trial were to be erected at the King's expense. This provided a system of criminal investigation for the whole country, with a reasonable verdict probable because the firm accusation of the jury entailed exile even if the ordeal acquitted the accused. In feudal courts the trial by battle could be avoided by the establishment of a concord, or fine. This system presupposed regular visits by the King's justices on circuit (or, in the technical phrase, "on eyre"), and these tours became part of the administration of the country. The justices formed three groups: one on tour, one "on the bench" at Westminster, and one with the King when the court was out of London. Those at Westminster dealt with private pleas and cases sent up from the justices on eyre.

Equally effective were the "possessory assizes." In the feudal world, especially in times of turmoil, violent ejections and usurpations were common, with consequent vendettas and violence. Pleas brought to feudal courts could be delayed or altogether frustrated. As a remedy Henry established the possessory writ, an order from the Exchequer, directing the sheriff to convene a sworn local jury at petty assize to establish the fact of dispossession, whereupon the sheriff had to reinstate the defendant pending a subsequent trial at the grand assize to establish the rights of the case. This was the writ of Novel Disseisin (i.e., recent dispossession). This writ was returnable; if the sheriff failed to achieve reinstatement, he had to summon the defendant to appear before the King's justices and himself be present with the writ. A similar writ of Mort d'Ancestor decided whether the ancestor of a plaintiff had in fact possessed the estate, whereas that of Darrein Presentment (i.e., last presentation) decided who in fact had last presented a parson to a particular benefice. All these writs gave rapid and clear verdicts subject to later revision. The fees enriched the treasury, and recourse to the courts both extended the King's control and discouraged irregular
self-help. Two other practices developed by Henry became permanent. One was scutage, the commutation of military service for a money payment; the other was the obligation, put on all free men with a property qualification by the Assize of Arms (1181), to possess arms suitable to theirstation.

The ministers who engaged upon these reforms took a fully professional interest in the business they handled, as may be seen in Fitzneale's writing on the Exchequer and that of the chief justiciar, Ranulf de Glanville, on the laws of England; and many of the expedients adopted by the King may have been suggested by them. In any case, the long-term results were very great. By the multiplication of a class of experts in finance and law Henry did much to establish two great professions, and the location of a permanent court at Westminster and the character of its business settled for England (and for much of the English-speaking world) that common law, not Roman law, would rule the courts and that London, and not an academy, would be its principal nursery. Moreover, Henry's decrees ensured that the judge-and-jury combination would become normal and that the jury would gradually supplant ordeal and battle as being responsible for the verdict. Finally, the increasing use of scutage, and the availability of the royal courts for private suits, were effective agents in molding the feudal monarchy into a monarchical bureaucracy before the appearance of Parliament.

Significance.

Henry II lived in an age of biographers and letter writers of genius. John of Salisbury, Thomas Becket, Giraldus Cambrensis, Walter Map, Peter of Blois, and others knew him well and left their impressions. All agreed on his outstanding ability and striking personality and also recorded his errors and aspects of his character that appear contradictory, whereas modern historians agree upon
the difficulty of reconciling its main features. Without deep religious or moral conviction, Henry nevertheless was respected by three contemporary saints, Aelred of Rievaulx, Gilbert of Sempringham, and Hugh of Lincoln. Normally an

approachable and faithful friend and master, he could behave with unreasonable inhumanity. His conduct and aims were always self-centred, but he was neither a tyrant nor an odious egoist. Both as man and ruler he lacked the stamp of greatness that marked Alfred the Great and William the Conqueror. He seemed also to lack wisdom and serenity; and he had no comprehensive view of the country's interest, no ideals of kingship, no sympathetic care for his people. But if his reign is to be judged by its consequences for England, it undoubtedly stands high in importance, and Henry, as its mainspring, appears among the most notable of English kings.

Eleanor OF AQUITAINE, also called ELEANOR OF GUYENNE, French ÉLÉONORE, or ALIÉNOR, D'AQUITAINE, or DE GUYENNE (b. c. 1122--d. April 1, 1204, Fontevrault, Anjou, Fr.), queen consort of both Louis VII of France (in 1137-52) and Henry II of England (in 1152-1204) and mother of Richard I the Lion-Heart and John of England. She was perhaps the most powerful woman in 12th-century Europe.

Eleanor was the daughter and heiress of William X, duke of Aquitaine and count of Poitiers, who possessed one of the largest domains in France--larger, in fact, than those held by the French king. Upon William's death in 1137 she inherited the Duchy of Aquitaine and in July 1137 married the heir to the French throne, who succeeded his father, Louis VI, the following month. Eleanor became queen of France, a title she held for the next 15 years. Beautiful, capricious, and adored by Louis, Eleanor exerted considerable influence over him, often goading him into undertaking perilous ventures.

From 1147 to 1149 Eleanor accompanied Louis on the Second Crusade to protect the fragile Latin kingdom of Jerusalem, founded after the First Crusade only 50 years before, from Turkish assault. Eleanor's conduct during this expedition, especially at the court of her uncle Raymond of Poitiers at Antioch, aroused Louis's jealousy and marked the beginning of their estrangement. After their return to France and a short-lived reconciliation, their marriage was annulled in March 1152. According to feudal customs, Eleanor then regained possession of Aquitaine, and two months later she married the grandson of Henry I of England, Henry Plantagenet, count of Anjou and duke of Normandy. In 1154 he became, as Henry II, king of England, with the result that England, Normandy, and the west of France were united under his rule. Eleanor had only two daughters by Louis VII; to her new husband she bore five sons and three

daughters. The sons were William, who died at the age of three; Henry; Richard, the Lion-Heart; Geoffrey, duke of Brittany; and John, surnamed Lackland until, having outlived all his brothers, he inherited, in 1199, the crown of England. The daughters were Matilda, who married Henry the Lion, duke of Saxony and Bavaria; Eleanor, who married Alfonso VIII, king of Castile; and Joan, who married successively William II, king of Sicily, and Raymond VI, count of Toulouse. Eleanor would well have deserved to be named the "grandmother of Europe."

During her childbearing years, she participated actively in the administration of the realm and even more actively in the management of her own domains. She was instrumental in turning the court of Poitiers, then frequented by the most famous troubadours of the time, into a centre of poetry and a model of courtly life and manners. She was the great patron of the two dominant poetic movements of the time: the courtly love tradition, conveyed in the romantic songs of the troubadours, and the historical maticre de Bretagne, or "legends of Britanny," which originated in Celtic traditions and in the Historia regum Britanniae, written by the chronicler Geoffrey of Monmouth some time between 1135 and 1139.

The revolt of her sons against her husband in 1173 put her cultural activities to a brutal end. Since Eleanor, 11 years her husband's senior, had long resented his infidelities, the revolt may have been instigated by her; in any case, she gave her sons considerable military support. The revolt failed, and Eleanor was captured while seeking refuge in the kingdom of her first husband, Louis VII. Her
semi-imprisonment in England ended only with the death of Henry II in 1189. On her release, Eleanor played a greater political role than ever before. She actively prepared for Richard's coronation as king, was administrator of the realm during his crusade to the Holy Land, and, after his capture by the Duke of Austria on Richard's return from the east, collected his ransom and went in person to escort him to England. During Richard's absence, she succeeded in keeping his kingdom intact and in thwarting the intrigues of his brother John Lackland and Philip II Augustus, king of France, against him.

In 1199 Richard died without leaving an heir to the throne, and John was crowned king. Eleanor, nearly 80 years old, fearing the disintegration of the Plantagenet domain, crossed the Pyrenees in 1200 in order to fetch her granddaughter Blanche from the court of Castile and marry her to the son of the French king. By this marriage she hoped to insure peace between the Plantagenets of England
and the Capetian kings of France. In the same year she helped to defend Anjou and Aquitaine against her grandson Arthur of Brittany, thus securing John's French possessions. In 1202 John was again in her debt for holding Mirebeau against Arthur, until John, coming to her relief, was able to take him prisoner. John's only victories on the Continent, therefore, were due to Eleanor.

She died in 1204 at the monastery at Fontevrault, Anjou, where she had retired after the campaign at Mirebeau. Her contribution to England extended beyond her own lifetime; after the loss of Normandy (1204), it was her own ancestral

lands and not the old Norman territories that remained loyal to England. She has been misjudged by many French historians who have noted only her youthful frivolity, ignoring the tenacity, political wisdom, and energy that characterized the years of her maturity. "She was beautiful and just, imposing and modest, humble and elegant"; and, as the nuns of Fontevrault wrote in their necrology: a queen "who surpassed almost all the queens of the world."

ENCICLOPEDIA BRITANICA

Eleanor of Aquitaine (1122?-1204), queen consort of France (1137-52) and queen consort of England (1154-1204), born in France. She inherited the duchy of Aquitaine from her father in 1137, the same year in which she was married to Louis VII of France. She accompanied her husband on the Second Crusade to the Holy Land, where it was rumored that she committed adultery. The scandal, and the fact that she had not given the king a male heir, resulted in an annulment of their marriage in 1152 under the pretext of blood kinship between her and the king. Later that year, Eleanor married and gave her possessions to Henry Plantagenet, count of Anjou, who in 1154 became Henry II, king of England. In 1170, the queen induced her husband to invest their son Richard the Lion-Hearted with her personal dominions of Gascony, Aquitaine, and Poitou. When Richard and his brothers rebelled against their father in 1173, Eleanor, already alienated from the king because of his unfaithfulness, supported her sons. Consequently, she was placed in confinement until 1185. After her release, she secured the succession of her son Richard, who had become heir apparent at the death in 1183 of his eldest brother. From the death of King Henry II in 1189 until Richard's return from the Third Crusade in 1194, Eleanor ruled as regent. During this time, she foiled the attempt of her son John in 1193 to conspire with France against the new king. After the return of Richard, she arranged a reconciliation between the two brothers. Eleanor continued to be prominent in public affairs until she retired to the abbey in Fontevrault, France, where she died on April 1, 1204.

Notes for Ricardo I Corazón de León (Rey de Inglaterra):

Richard I, called Coeur de Lion or Lion-Hearted (1157-99), king of England (1189-99), third son of King Henry II and Eleanor of Aquitaine, born in Oxford. When he was an infant, Richard was betrothed to a daughter of the French king Louis VII, and in 1172 he was given the duchy of Aquitaine in France, his mother's inheritance. His early years were spent in warring against his father to protect his own interests; he emerged a brilliant soldier. In 1189 he became king of England and shortly thereafter set out on the Third Crusade. He was accompanied by the young Philip II, king of France, son of Louis VII. The Crusade proved a failure almost from the start, mainly because of the lack of harmony between the two kings. In Sicily Richard quarreled with Philip and refused to marry Philip's sister as planned. Instead he married Berengaria of Navarre on Cyprus, which he conquered in 1191. After capturing Acre from the Saracens that same year, Richard executed 2700 Muslim prisoners of war. It was Richard's personal valor in the Holy Land, however, rather than his ruthlessness, that made his name famous in legend. Conflict over policy in the Holy Land resulted in a break between the two, and Philip returned to France alone. Richard spent months in indecisive contests against Saladin, sultan of Egypt and Syria, before making a truce by which Jerusalem was left in Saladin's hands. Captured en route to England by Leopold V, duke of Austria (1157-94), Richard was handed over to Holy Roman Emperor Henry IV. He was released in 1194 only after paying a heavy ransom. Richard returned to England and there made peace with his brother, John, later king of England, who in his absence had been conspiring with Philip to usurp the English throne. Leaving the government of England to the care of the able administrator Hubert Walter, archbishop of Canterbury (died 1205), Richard went to France in 1194 to wage war against the French king. Campaigns in defense of his European lands continued for five years. Victor in most of the warfare in which he engaged, Richard was fatally wounded by an arrow during an insignificant skirmish in 1199.

As king, Richard had chosen able ministers, to whom he left most matters of administration. Under his rule, however, England suffered heavy taxation, levied to support his expeditions. Sometimes cruel, sometimes magnanimous, and always courageous, Richard was well versed in the knightly accomplishments of his age and was also a poet. He was to become the hero of many legendary tales.

Notes for Berenguela de Navarra (Reina de Inglaterra):

Berengaria (circa 1165-1230), queen consort of King Richard I of England. She was the daughter of Sancho VI, king of Navarre (1132?-94), and was betrothed to Richard shortly after his accession to the English throne in 1189. She joined him in Reggio, Italy, in 1191, while he was traveling to Palestine on the Third Crusade, and they were married later the same year in Limassol, Cyprus. From 1191 to 1192, while Richard campaigned against the Saracens, she lived in Acre in Palestine, and from 1192 to 1194, while he was a prisoner in Germany, she lived in Poitou (now in France). After Richard's release from captivity the couple appear to have become estranged, and modern historians agree that they were probably never reunited. After Richard's death in 1199, Berengaria spent most of her last years in Le Mans, France, where she died.

Notes for John, King Of England:
John, byname JOHN LACKLAND, French JEAN SANS TERRE (b. Dec. 24, 1167, Oxford--d. Oct. 18/19, 1216, Newark, Nottinghamshire, Eng.), king of England from 1199 to 1216. In a war with the French king Philip II, he lost Normandy and almost all his other possessions in France. In England, after a revolt of the barons, he was forced to seal the Magna Carta (1215).

Youth and rivalry for the crown

John was the youngest son of Henry II and Eleanor of Aquitaine. Henry's plan (1173) to assign to John, his favourite son (whom he had nicknamed Lackland), extensive lands upon his marriage with the daughter of Humbert III, count of Maurienne (Savoy), was defeated by the rebellion the proposal provoked among John's elder brothers. Various provisions were made for him in England (1174-76), including the succession to the earldom of Gloucester. He was also
granted the lordship of Ireland (1177), which he visited from April to late 1185, committing youthful political indiscretions from which he acquired a reputation for reckless irresponsibility. Henry's continued favour to him contributed to the rebellion of his eldest

surviving son, Richard I (later called Coeur de Lion), in June 1189. For obscure reasons John deserted Henry for Richard.

On Richard's accession in July 1189, John was made count of Mortain (a title that became his usual style), was confirmed as lord of Ireland, was granted lands and revenues in England worth 6,000 a year, and was married to Isabella, heiress to the earldom of Gloucester. He also had to promise (March 1190) not to enter England during Richard's absence on his crusade. But John's actions were now dominated by the problem of the succession, in which his nephew, the three-year-old Arthur I, duke of Brittany, the son of his deceased elder brother Geoffrey, was his only serious rival. When Richard recognized Arthur as his heir (October 1190), John immediately broke his oath and returned to England, where he led the opposition to Richard's dictatorial chancellor, William Longchamp. On receiving the news in January 1193 that Richard, on his way back from the crusade, had been imprisoned in Germany, John allied himself with King Philip II Augustus of France and attempted unsuccessfully to seize control of England. In April 1193 he was forced to accept a truce but made further arrangements with Philip for the division of Richard's possessions and for rebellion in England. On Richard's return, early in 1194, John was banished and deprived of all his lands. He was reconciled to Richard in May and recovered some of his estates, including Mortain and Ireland, in 1195, but his full rehabilitation came only after the Bretons had surrendered Arthur to Philip II in 1196. This led Richard to recognize John as his heir.

Accession to the throne.

In 1199 the doctrine of representative succession, which would have given the throne to Arthur, was not yet generally accepted, and following Richard's death in April 1199 John was invested as duke of Normandy and in May crowned king of England. Arthur, backed by Philip II, was recognized as Richard's successor in Anjou and Maine, and it was only a year later, in the Treaty of Le Goulet, that John was recognized as successor in all Richard's French possessions, in return for financial and territorial concessions to Philip.

War with France.

The renewal of war in France was triggered by John's second marriage. His first wife, Isabella of Gloucester, was never crowned, and in 1199 the marriage was dissolved on grounds of consanguinity, both parties being great-grandchildren of Henry I. John then intervened in the stormy politics of his county of Poitou and, while trying to settle the differences between the rival families of Lusignan and Angoulême, himself married Isabella

(August 1200), the heiress to Angoulême, who had been betrothed to Hugh IX de Lusignan. This politically conceived marriage provoked the Lusignans into rebellion the next year; they appealed to Philip II, who summoned John to appear before his court. In the general war that followed his failure to answer this summons, John had a temporary success at Mirebeau in August 1202, when Arthur of Brittany was captured, but Normandy was quickly lost (1204). By 1206, Anjou, Maine, and parts of Poitou had also gone over to King Philip.

These failures, foreshadowed under Henry II and Richard, were brought about by the superiority of French resources and the increasing strain on those of England and Normandy. Nevertheless, they were a damaging blow to John's prestige, and, equally important, they meant that John resided now almost permanently in England. This factor, coinciding with the death (1205) of the chancellor and archbishop of Canterbury, Hubert Walter, gave his government a much more personal stamp, which was accentuated by the promotion of members of his household to important office. His determination to reverse the continental failure bore fruit in ruthlessly efficient financial administration, marked by taxation on revenues, investigations into the royal forests, taxation of the Jews, a great inquiry into feudal tenures, and the increasingly severe exploitation of his feudal prerogatives. These measures provided the material basis for the charges of tyranny later brought against him.

Quarrel with the church.

John's attention was diverted and his prestige disastrously affected by relations with the papacy. In the disputed election to the see of Canterbury following the death of Hubert Walter, Pope Innocent III quashed the election of John's nominee in procuring the election of Stephen Langton (December 1206). John, taking his ground on the traditional rights of the English crown in episcopal elections, refused to accept Langton. In March 1208, Innocent laid an interdict on England and excommunicated John (November 1209). The quarrel continued until 1213, by which time John had amassed more than 100,000 from the revenues of vacant or appropriated sees and abbeys. But such a dispute was a dangerous hindrance to John's intention to recover his continental lands. In November 1212 he agreed to accept Langton and the Pope's terms. Apparently at his own behest, he surrendered his kingdom to the papal nuncio at Ewell, near Dover, on May 15, 1213, receiving it back as a vassal rendering a tribute of 1,000 marks (666 13s. 4d.) a year. He was absolved from excommunication by Langton in July 1213, and the interdict was finally relaxed a year later. John thus succeeded in his aim to secure the papacy as a firm ally in the fight with Philip

and in the struggle already pending with his own baronage. But his treatment of the church during the interdict, although arousing little if any opposition among the laity at the time, angered monastic chroniclers, who henceforth loaded him with charges of tyranny, cruelty, and, with less reason, of sacrilege and irreligion.

Baronial rebellion and the Magna Carta.

In August 1212 recurrent baronial discontent had come to a head in an unsuccessful plot to murder or desert John during a campaign planned against the Welsh. Pope Innocent's terms had included the restoration of two of those involved, Eustace de Vesci and Robert Fitzwalter, and, although the barons soon lost papal support, they retained the protection of Stephen Langton. John, skillfully isolating the malcontents, was able to launch his long-planned campaign against the French, landing at La Rochelle in February 1214. He achieved nothing decisive and was forced to accept a truce lasting until 1220. Returning to England in October 1214, he now had to face much more widespread discontent, centred mainly on the northern, East Anglian, and home counties. After lengthy negotiations in which both sides appealed to the Pope, civil war broke out in May 1215. John was compelled to negotiate once more when London went over to the rebels in May, and on June 19 at Runnymede he accepted the baronial terms embodied in the Magna Carta, which ensured feudal rights and restated English law. This settlement was soon rendered unworkable by the more intransigent barons and John's almost immediate appeal to Pope Innocent against it. Innocent took the King's side, and in the ensuing civil war John captured Rochester castle and laid waste the northern counties and the Scottish border. But his cause was weakened by the arrival of Prince Louis (later Louis VIII) of France, who invaded England at the barons' request. John continued to wage war vigorously but died, leaving the issues undecided. His death made possible a compromise peace, including the restoration of the rebels, the succession of his son Henry III, and the withdrawal of Louis.

Assessment

John's reputation, bad at his death, was further depressed by writers of the next generation. Of all centuries prior to the present, only the 16th, mindful of his quarrel with Rome, recognized some of his quality. He was suspicious, vengeful, and treacherous; Arthur I of Brittany was probably murdered in captivity, and Matilda de Braose, the wife of a recalcitrant Marcher baron, was starved to death with her son in a royal prison. But John was cultured and literate. Conventional in
his religion rather than devout, he was remembered for his benefactions to the church of Coventry, to Reading Abbey, and to

Worcester, where he was buried and where his effigy still survives. He was extraordinarily active, with a great love of hunting and a readiness to travel that gave him a knowledge of England matched by few other monarchs. He took a personal interest in judicial and financial administration, and his reign saw important advances at the Exchequer, in the administration of justice, in the importance of the privy seal and the royal household, in methods of taxation and military organization, and in the grant of chartered privileges to towns. If his character was unreliable, his political judgment was acute. In 1215 many barons, including some of the most distinguished, fought on his side. (J.C.H.)

James I, byname JAMES THE CONQUEROR, Spanish JAIME EL CONQUISTADOR (b. Feb. 2, 1208, Montpellier, County of Toulouse--d. July 27, 1276, Valencia, Valencia), the most renowned of the medieval kings of Aragon (1213-76), who added the Balearic Islands and Valencia to his realm and thus initiated the Catalan-Aragonese expansion in the Mediterranean that was to reach its
zenith in the last decades of the 14th century.

James was the son of Peter II of Aragon and Mary of Montpellier. When Peter, allied with the Albigensian heretics, died fighting against the crusaders sent against them at the Battle of Muret, James was only five years old and was at Carcassonne, Fr., in the hands of the crusaders' leader, Simon de Montfort. James was released in April 1214 and recognized as sovereign in Aragon and Catalonia; placed under the protection of the Knights Templars at Monzón, he was cared for and educated by them. The regency was exercised by his great-uncle, Count Sancho of Roussillon (in Aragon, now in France), until 1218, when Sancho resigned in the face of opposition from some Aragonese and Catalonian nobles. The ensuing rebellions, during which the King often found himself in great danger, formed a hard school for the forging of his character. Fearless even as a youth, he fought an Aragonese noble in hand-to-hand combat, took part in the siege of the port of Castejón in 1222, and three years later tried to seize another port.

In 1227 James took over the effective government of his kingdoms and at once began the first of his great campaigns of reconquest--that of the Balearic Islands. Majorca was captured in December 1229, and the occupation was rounded off in 1235 by the conquest of Ibiza by the Bishop of Saragossa. Thenceforward, the islands were a bulwark to defend the Catalan coasts and a base from which trade and political expansion could be launched eastward.

In 1233 James began a second war of reconquest--against the Saracen rulers of the Kingdom of Valencia. The campaign lasted three long years and suffered various interruptions before the capital itself was captured in 1238. The occupation of the kingdom was completed later with the capture of other towns, and in 1244 a treaty was signed by which the boundaries of Aragon and Castile were delimited in the newly conquered areas.

James I married twice. In 1221 he married Leonor, daughter of Alfonso VIII of Castile, but he later divorced her and in 1235 married the daughter of Andrew II of Hungary, Yolande, by whom he had many children. In 1248 and 1262 he divided his realms among his sons but only succeeded in causing virulent civil strife. In the second division, his elder son, Peter, received Aragon, Valencia, and Catalonia, and his younger son, James, received the Balearic Islands,

Roussillon, and other Pyrenean counties that he was to hold in fief from Peter. This division of realms among his heirs was not James's only political blunder. By the Treaty of Corbeil (1258) he renounced his claims to territories in the south of France, thus abandoning the traditional policy that the Catalan dynasty had hitherto pursued across the Pyrenees. He was, however, able to develop relations and promote trade with the states of North Africa; and, with a clear view of the future, he married his principal heir, Peter, to Constance of Sicily, thus making it easy for the latter kingdom to be added in later years to the crown of Aragon. Always a chivalrous soldier, James helped his son-in-law Alfonso X of Castile to suppress the rebellion of the Moors in the Kingdom of Murcia (1266); he also set out on a crusade to the Holy Land (1269), though this was a failure.

A soldier of extraordinary courage and great gifts of leadership, James was a stout man, strong and handsome; he has been criticized for his many love affairs that caused him to be described as an home de fembres ("lady's man"). On balance, his reign was very beneficial. The important code of maritime law called the Llibre del consolat del mar was compiled; the Kingdom of Valencia received its own legal system; various cities, including Barcelona, acquired their own civic administrations; and the Cortes--the representative assembly--came into being. The King protected men of letters, inspired the chronicle that bears his name (though he did not himself write it), and brought his different peoples to a degree of political and cultural maturity that can reasonably be described as admirable.

BRITANICA

James I (of Aragón), called The Conqueror (1208-76), king of Aragón (1213-76), son of King Pedro II (1174-1213), born in Montpellier, France. He succeeded his father as king of Aragón in 1213. Sixteen years later James began his conquest of the Balearic Islands, gaining full control in 1235. After a 3-year campaign he then captured the Moorish city and kingdom of Valencia. He promulgated a new legal code in 1247 and brought an end to the conflicting territorial claims of Aragón and France by concluding the Treaty of Corbeil with Louis IX of France in 1258. He spent the remaining years of his life attempting to drive the Moors from the Spanish peninsula. Before his death he divided his kingdom between his two sons, a division that ultimately led to conflict.

Notes for Alfonso X el Sabio (Rey de Castilla y León):
ALFONSO X EL SABIO REY DE CASTILLA Y LEON
(Toledo, 1221-Sevilla, 1284). Rey de Castilla y León. Ademis de realizar grandes avances en la Reconquista, este monarca mantuvo activas relaciones con los demis reinos cristianos de la Penknsula e intervino en la polktica europea. El sobrenombre de el Sabio procede del gran impulso que dio a la

ciencia y la cultura. Hijo de Fernando III y Beatriz de Suabia, siendo todavka infante conquistó el reino musulmin de Murcia, del que tomó posesión en 1244 en nombre de su padre. Ello fue posible gracias al tratado de Almizra, que acordó con Jaime I de Aragón ese mismo ano. Con el fin de estrechar los lazos entre ambas coronas, casó con Violante, hija del monarca aragonés, lo que le permitió proseguir la Reconquista sin preocuparse por las rivalidades dinisticas. Una vez instalado en el trono (1252), dedicó todos sus esfuerzos a la conquista de Andalucka: ocupó Jerez, Lebrija, Medina Sidonia, Arcos, Niebla y Cidiz. No obstante, tales avances no redundaron en favor de la corona, sino de la nobleza, a la que Alfonso X concedió enormes beneficios territoriales y jurisdiccionales. Fue el primer monarca castellano que se preocupó de tener una presencia en Europa. Ask, a la muerte de Guillermo de Holanda (1257), pretendió ser elegido para la dignidad imperial alegando el parentesco de su madre con los Staufen alemanes, pero no consiguió su propósito a causa de la hostilidad del Papado y de Francia, y también por la oposición de muchos nobles castellanos, que vekan en ello una sangrka de los recursos que debkan dedicarse a la Reconquista. Preocupado por la difusión de la cultura y empenado en una vasta labor legislativa, patrocinó la traducción del irabe al castellano de numerosas obras de caricter cientkfico (como El libro del saber de astronomka, que incluka las llamadas Tablas alfonskes), e impulsó la redacción del Fuero Real (recopilación de la tradición jurkdica castellana) y, sobre todo, de las Siete Partidas. A él se deben también la Crónica general y la General e grande estoria, que suponen sendos intentos de establecer una historia de Espana y una historia universal, respectivamente. Las dotes de escritor del monarca se reflejaron en la poeska en lengua gallega, en especial en sus Cantigas a Santa Marka, conjunto de 420 canciones en alabanza de la Virgen. Los sltimos anos del reinado de Alfonso X se vieron ensombrecidos por el enfrentamiento, por motivos sucesorios, entre el rey y su segundo hijo, el futuro Sancho IV. Éste contaba con el apoyo de la nobleza y las ciudades, mientras que el monarca se inclinaba por los hijos de su primogénito Fernando de la Cerda, fallecido en 1275. El pleito dinistico se convirtió pronto en guerra civil, en la que cada bando buscó aliados en el exterior. En 1282 Sancho consiguió deponer a su padre, que hubo de retirarse a Sevilla.

Alfonso X, byname ALFONSO THE WISE, Spanish ALFONSO EL SABIO (b. Nov. 23, 1221, Burgos, Castile--d. April 4, 1284, Seville), king of Castile and Leon from 1252 to 1284.

His father, Ferdinand III, conquered Andalusia and imposed tribute on the remaining Muslim states in Spain--Murcia and Granada. His mother, Beatrice, was granddaughter of the Holy Roman emperor Frederick I. Alfonso, already known as a scholar, became king in 1252. He had many scholars in his travelling court, and he was an active participant in their writing and editing. Some were experts on Roman law, which Alfonso hoped to make the basis of a uniform code for his lands. The court, gifts to friends, and foreign intrigue proved expensive, and Alfonso taxed heavily.

Alfonso crushed a Muslim revolt in 1252, and a revolt by nobles in 1254. Morocco, Granada, and Murcia invaded in 1264, but Alfonso won with Aragonese help, and annexed Murcia. In 1272, a revolt, and withdrawal to Granada, by nobles forced him to confirm local privileges.

In 1273 Alfonso founded, and granted privileges to, the Mesta, a guild of migratory shepherds.

Alfonso claimed many foreign titles, notably that of Holy Roman emperor in 1256. In 1257, bribes won him four electoral votes for emperor to three for Richard of Cornwall, but Richard, unlike Alfonso, could go to Germany. In 1275 Richard died, and Alfonso went to France to appeal to Pope Gregory X, who persuaded him to renounce his claim.

While Alfonso was in France, Morocco and Granada invaded Castile. Ferdinand, Alfonso's eldest son, was killed in the fighting. Sancho, Alfonso's second son, became a hero in defeating the invaders, and proclaimed himself heir, disregarding Ferdinand's sons, who were nephews of the French king. Alfonso recognized Sancho's claim in 1278, but, under French pressure, became
ambiguous in 1281. Taking advantage of grievances against Alfonso, Sancho declared himself regent. Towns and nobles rose against Alfonso, who had to take refuge in Seville. Some of Sancho's followers deserted, but, after Alfonso died, Sancho took Seville and became King Sancho IV.

Alfonso's court scholars wrote mostly in Castilian Spanish, which they made a literary language by regularizing the syntax and by borrowing --and defining- words for concepts not previously discussed. In their Premera crónica general, they tried to determine historical facts from chronicle, folklore, and Arabic sources. Less factual was their Gran e general estoria, a world history, with extensive translations from the Old Testament. The Tablas Alfonskes were planetary tables, based on an Arabic source but updated by observations at Toledo 1262-72. Siete partidas was the most important law code. It was based on Roman law, and contained discourses on manners and morals, and an idea of the king and his people as a corporation--superior to feudal arrangements--with the king as agent of both God and the people. After Alfonso's death, Siete partidas was proclaimed the law of all Castile and Leon in 1348, and the language of Alfonso's court evolved into modern Castilian Spanish.

Manfred, Italian MANFREDI (b. c. 1232--d. Feb. 26, 1266, near Benevento, Kingdom of Naples), effective king of Sicily from 1258, during a period of civil wars and succession disputes between imperial claimants and the House of Anjou.

The son of the Holy Roman emperor Frederick II, Manfred became vicar of Italy and Sicily for his half brother Conrad IV but soon began seeking the Sicilian crown for himself. On Conrad's death in 1254 a diet at San Germano ignored the imperial representative and elected Manfred. Pope Alexander IV, however, after having excommunicated Manfred twice, invested Edmund, son of Henry III of England, with the Sicilian kingdom in April 1255. A papal army entered the kingdom, but Manfred resisted successfully and was crowned king of Sicily at Palermo on Aug. 10, 1258.

As protector of the Italian Ghibellines, Manfred asserted himself also in Lombardy and Tuscany; and he further strengthened his position by the betrothal, in 1260, of his daughter Constance to the infante Peter of Aragon. Negotiations with the new pope, Urban IV, came to nothing; and Urban, considering Alexander IV's agreement with England void, offered the Sicilian crown to Charles of Anjou, who sailed for Rome in May 1265. Manfred, having failed to prevent Charles's army from joining him, was defeated near Benevento; he fell in battle.

Sept. 24, 1230, Villanueva de Sarria, Galicia), king of Leon from 1188 to 1230, son of Ferdinand II of Leon and cousin of Alfonso VIII of Castile (next to whom he is numbered as a junior member of the family). A forceful personality, Alfonso IX was determined to recover Leonese territory lost to Castile; and, despite the fact that he had done homage to Alfonso VIII, he did not hesitate to ally himself with the Almohads to further this end. As
a result, his kingdom was placed under papal interdiction, and he was finally compelled to marry the Castilian king's eldest daughter. He refused, however, to join his father-in-law in the crusade against the Almohads in 1212 unless the lost lands were first restored by Castile. This was not done and the Leonese army was, therefore, absent from Las Navas de Tolosa. Nevertheless, operating on his own, Alfonso IX won important victories beyond the southern frontiers of Leon, taking Ciceres (1227) and Mérida and Badajoz (1230) from the Almohads. These victories opened the road for a future reconquest of Seville.

Alfonso founded the University of Salamanca and captured Ciceres, Badajoz, and Mérida from the Muslim Almohads.

Fernando III el Santo, (Valparaíso, Zamora, 1201-Sevilla, 1252). Rey de Castilla y León. Artífice de la unión definitiva de los antiguos reinos de Castilla y León, Fernando III supo dar un gran impulso a la Reconquista, al tiempo que emprendió una profunda revisión del sistema judicial, al que aportó el célebre Liber Iudiciorum o Fuero Juzgo. Hijo de Alfonso IX de León y de Berenguela, hija de Alfonso VIII de Castilla, se educó en la corte leonesa después de la separación de sus padres. En 1217 accedió al trono castellano, a pesar de la oposición de su padre, y muerto éste, al trono leonés (1230), unificando así ambos reinos. Fernando III reconquistó diversas plazas extremeñas y casi toda Andalucía, excepto el reino de Granada, tierrra cuya repoblación inició rápidamente. El sistema de repoblación emprendido se basó en las grandes propiedades que se otorgaban a las órdenes militares, los obispos y los particulares, y que constituye el origen del latifundismo andaluz. Entre las plazas que reconquistó a lo largo de sus campañas se encuentran Montiel, Medellín, Baza (1226), Trujillo, Beda, Córdoba (1232-1236), Jaén (1246), Sevilla (1248), Medina Sidonia, Arcos, Jerez y Cádiz (1250). En otro orden de cosas, Fernando III firmó con Aragón el tratado de Almizra (1244), mediante el cual se fijaron las fronteras entre este reino y el de Castilla y León. Mandó traducir al castellano el Liber Iudiciorum, un ordenamiento jurídico de raíz visigoda que, con el nombre de Fuero Juzgo, se convirtió en uno de los principales pilares del

Derecho medieval. Fundó las catedrales de Burgos (1221) y Toledo (1226), así como la Universidad de Salamanca (1239). Fue canonizado, en 1671, por el Papa Clemente X.

Ferdinand III (of Castile and León), called The Saint (1199-1252), king of Castile (1217-52) and of León (1230-52); he was the son of King Alfonso IX of León and Castile. In 1217 Ferdinand's mother, Berengaria (1171-1246), renounced her title to the Castilian throne in favor of her son. Alfonso, who had himself expected to acquire Castile, was angered at his wife's action, and, aided by a group of Castilian nobles favorable to his claim, made war upon his newly crowned son. Ferdinand, however, with the wise counsel of his mother, proved more than a military match for Alfonso, who at length was forced to abandon his plan of conquering Castile. Through the good offices of Berengaria, Ferdinand was able to effect the peaceful union of León and Castile upon the death of his father in 1230. Ferdinand devoted his energies to prosecuting the war against the Moors, conquering Cordoba in 1236 and Seville in 1248. He was rigorous in his suppression of the heretical Albigenses, a fact largely responsible for his canonization more than two centuries later. In 1242 Ferdinand reestablished at Salamanca the university originally founded by his grandfather.

Ferdinand III, also called SAINT FERDINAND, Spanish SAN FERNANDO (b. 1201?--d. May 30 1252, Seville; canonized Feb. 4, 1671; feast day May 30), king of Castile from 1217 to 1252 and of Leon from 1230 to 1252 and conqueror of the Muslim cities of Córdoba (1236), Jaén (1246), and Seville (1248). During his campaigns, Murcia submitted to his son Alfonso (later Alfonso X), and the Muslim kingdom of Granada became his vassal.

Ferdinand was the son of Alfonso IX of Leon and Berenguela, daughter of Alfonso VIII of Castile. When born, he was the heir to Leon, but his uncle, Henry I of Castile, died young, and his mother inherited the crown of Castile, which she conferred on him. His father, like many Leonese, opposed the union, and Ferdinand found himself at war with him. By his will Alfonso IX tried to
disinherit his son, but the will was set aside, and Castile and Leon were permanently united in 1230.

Ferdinand married Beatrice of Swabia, daughter of the Holy Roman emperor, a title that Ferdinand's son Alfonso X was to claim. His conquest of Lower Andalusia was the result of the

disintegration of the Almohad state. The Castilians and other conquerors occupied the cities, driving out the Muslims and taking over vast estates.

Ferdinand's second wife was Joan of Ponthieu, whom he married in 1237; their daughter Eleanor married the future Edward I of England in 1254. Ferdinand settled in Seville, where he is buried.

Notes for Federico I Barbarroja (Emperador Rom Germinico):
Frederick I, byname FREDERICK BARBAROSSA (Italian: Redbeard) (b. c. 1123--d. June 10, 1190, Kingdom of Armenia), duke of Swabia (as Frederick III, 1147-90) and German king and Holy Roman emperor (1152-90), who challenged papal authority and sought to establish German predominance in

western Europe. He engaged in a long struggle with the cities of northern Italy (1154-83), sending six major expeditions southward. He died while on the Third Crusade to the
Holy Land.

Early years.

Frederick was the son of Frederick II, duke of Swabia, and Judith, daughter of Henry IX, duke of Bavaria, of the rival dynasty of the Welfs. After succeeding his father as duke of Swabia, Frederick was elected German king on March 4, 1152, in Frankfurt, succeeding his uncle, Emperor Conrad III. Frederick's contemporaries believed that, because he united in himself the blood of the Welfs and the Hohenstaufen, he would solve the internal problems of the kingdom. The announcement of his election, which he sent to Pope Eugenius III, made it plain that Frederick I was not ready to recognize the preeminence over the emperors that the popes had won during the quarrel over the right of investiture of bishops and abbots. Frederick, moreover, filled several vacant episcopal sees, thereby violating the Concordat of Worms of 1122. Nevertheless, he was to learn that he could not prevail against the papacy as easily as the earlier emperors, Otto I and Henry III, had done because the political balance of the West had changed. Under the powerful emperor Manuel I Comnenus, the Byzantine Empire had grown to be a political factor in the Mediterranean and in Italy. Southern Italy and Sicily were united in the Norman kingdom of Roger II. The cities of the Lombards, which had been little more than a nuisance to the earlier emperors, had now become invincible.

Frederick started his struggle for the old goal of the predominance of the Empire over the European monarchies with great political skill. By not recognizing the treaty of alliance between his predecessor, Conrad III, and Manuel I Comnenus of Byzantium against Roger II of Sicily, Frederick forced Pope Eugenius III to sign the Treaty of Constance (1153) with him because the Pope was more exposed to pressure from the Norman kingdom to the south as well as from Arnold of Brescia in Rome. Frederick promised not to make peace with the Roman
commune, headed by Arnold (whom he hanged) or with the Normans without the agreement of the Pope. He also promised not to concede any Italian land to the Byzantine Emperor and, finally, to maintain the position of the papacy (honor papatus). Eugenius III, on his part, promised that Frederick would receive the imperial crown and that the rights of the empire would be maintained. When Manuel of Byzantium offered Frederick a Byzantine princess as wife and attempted to induce him to fight against the Norman kingdom, Frederick refused. The successor of Eugenius III, Pope Adrian IV, honoured the Treaty of Constance and crowned Frederick emperor on June 18, 1155, in Rome.

The German princes refused to give Frederick the support necessary to attack the Sicilian kingdom, which, under Roger's son William I (reigned 1154-66), was passing through a crisis. Although Manuel now formed an allegiance with the rebellious Norman barons, the city of Genoa, and the Pope, Adrian still would not accept the Byzantine offer of help against William I of Sicily. After

William had brought his crisis to an end, he was able to force the Pope to sign the Concordat of Benevento in 1156 by which Adrian gave William Sicily and the Norman principalities on the mainland as far north at Naples and Capua and granted him special rights for the Sicilian church. This new treaty was in violation of the Treaty of Constance. Cardinal Roland (later Pope Alexander III) was supposed to explain the Pope's new policy to the princes and to the Emperor at the imperial Diet of Besaneon 1157. A letter from the Pope, which was translated in an inflammatory manner by the imperial chancellor Rainald of Dassel, caused a critical argument between the papal delegation and the German princes over whether or not the empire was dependent upon the papacy. Adrian explained later that he meant the word beneficium, which had caused all the trouble, to
mean benefit and not fief.

Attempt to regain imperial rights.

In 1158, after Frederick had solved several decisive domestic problems (see below), he began his second campaign in Italy, seeking the complete restoration of the imperial rights. After laying siege to and conquering Milan, which had attempted to oppose him, Frederick opened the Diet of Roncaglia. The goal of this Diet was to define and guarantee the rights of the emperor, which would bring the empire an estimated 30,000 pounds of silver per year. Frederick attempted, beginning in 1158 and especially after 1162, not only to achieve the granting of these rights but also to put a systematic financial administration into effect. His goal was to reduce imperial Italy to a system of well-controlled castles, palaces, and cities, with the self-government of the cities controlled
by imperial officials. What the Emperor saw as a restoration of the imperial rights, however, was considered by the cities as a curtailment of their freedom. A tax called the fodrum was levied on all the inhabitants of imperial Italy; in return the Italian nobles and communes were excused from service in Frederick's armies and were guaranteed his protection. A portion of the Italian money went to the German princes; this enabled Frederick to win their support without making too many political concessions to them in Germany. The ecclesiastical princes of the empire, however, still had to render full service for Italy; the archbishopric of Mainz suffered severe financial losses because Archbishop Christian was active for a long time in Italy as imperial legate. The Italian taxes allowed Frederick to enlist mercenaries (Brabantini) in order to free himself militarily, to a certain extent, from the fief holders. The money of Italy was not, however, the only motive of Frederick's Italian policy.

The Pope, as well as the cities, felt threatened by a tightly organized imperial state in Italy. In 1159 Cardinal Octavian was elected Pope Victor IV with the support of Frederick, and Cardinal Roland was elected Pope Alexander III in a tumultuous and disputed voting session. Alexander, supported by many cardinals, was also immediately recognized by William of Sicily as the true pope. At the council of 1160 in Pavia, convened by the Emperor, only Victor IV was present and was declared the rightful pope, thereby earning Alexander's hostility.

Relations with Pope Alexander III.

Alexander III, one of the greatest lawyers of the church, wanted to found a papacy that would be independent of the Emperor; he excommunicated Frederick in 1160. France, England, Spain, Hungary, the Lombards, and even Emperor Manuel joined Alexander's party; Alexander retired to France in 1161, where he remained until 1165. John of Salisbury asked at that time: "Who made the
Germans judges of the nations?" Barbarossa's attempt to persuade King Louis VII of France to try to heal the schism when they met at Saint-Jean-de-Losne on the Saone was of no avail. Alexander attempted to bring Frederick back into the church but with no success. At Alexander's urging, the Byzantine emperor Manuel Comnenus now prepared to form an alliance with France and was ready to recognize the Pope. In 1162 Milan was destroyed by Frederick.

When Victor IV died in 1164, Paschal III (reigned 1164-68) was quickly elected as the new imperial pope on the urging of Rainald of Dassel, perhaps against the will of the Emperor. Because of friction between Louis VII and Henry II of England and because the latter was embroiled in an argument with Thomas Becket, Barbarossa decided to form an alliance with Henry II. At the Diet of 1165 in Würzburg, Frederick swore not to recognize Alexander III. The promises made by the English delegates that Frederick's political wishes would be recognized were denied by Henry II, who preferred to keep Alexander under pressure, thus making things more difficult for Becket.

Following the death of William I of Sicily in 1166, Frederick felt that the time had come to strike a decisive blow against Alexander III, who had returned to Rome, and against Sicily. The Lombard League was formed to defend against the Emperor's fourth expedition to Italy. Frederick's expedition ended in disaster, however, when malaria broke out in his army. Rainald of Dassel died in Rome at this time, causing a change in the imperial strategy. When Frederick negotiated peace between Louis VII and Henry II and then sent the Bishop of Bamberg in 1170 to Alexander III and envoys to Byzantium, a détente resulted that even Alexander could not escape. In his fifth Italian campaign (1174) Frederick did not defeat the Lombards militarily, but they were forced to subject themselves to him in the Armistice of Montebello. Because Duke Henry the Lion of Saxony refused to come to his aid, however, Frederick lost the Battle of Legnano against the Lombards. He was now ready to deal with the Pope, and in 1176 they signed the Treaty of Anagni. In the Peace of Venice (1177) Barbarossa acknowledged Alexander III as the true pope. In front of the Church of St. Mark's, Barbarossa received the kiss of peace from the Pope. At Venice the imperial delegates had been able to improve the Emperor's position. Above all was the fact that, although a truce had been negotiated with the Lombards, they were not included in the peace treaty. A treaty with the Lombards was finally confirmed in the year 1183.

Barbarossa meanwhile had also initiated sweeping changes in his empire, where Duke Henry the Lion of Saxony was the strongest prince next to him. When Barbarossa took office, Henry had laid claim to Bavaria, the domain of

the margrave Henry II Jasomirgott of Austria. Barbarossa bestowed Bavaria on Henry the Lion, and as compensation he elevated the margravate to a dukedom, with special rights. The Emperor also left the dukedom of Saxony and Mecklenburg under Henry the Lion's control, and in 1154 the Duke received the privilege of investing bishops in the colonial land east of the Elbe. The year 1158 was of great importance for the empire; Barbarossa founded the imperial territory of Pleissnerland (south of Leipzig), elevated Duke Vladislav II of Bohemia to king, and granted the Archbishop of Bremen important privileges, restoring the Bishop's lost political power. Also in 1158 Frederick promised to enfeoff Waldemar I the Great of Denmark--that is, make him his vassal with certain rights.

Meanwhile, Henry the Lion founded the cities of Munich and Lübeck (1158). The founding of Lübeck brought German merchants to the Baltic Sea. The Duke closed a contract between the Germans and the inhabitants of Gotland and sent envoys to Scandinavia and Russia. A trade agreement was closed in 1189 with Novgorod. About 1180 German merchants reached Riga; their advance was protected by Henry's conquest of Mecklenburg (1177). By 1148 Henry had the county and the town of Stade, the most important harbour on the Elbe, in his control.

Deposition of Henry the Lion.

At the same time German colonists had settled in Brandenburg under the margrave Albert I the Bear and in Silesia. Barbarossa had restored the dependence of the Polish dukes during two expeditions to Poland in 1157 and 1172. Henry the Lion, the most powerful prince in northern Germany, made Brunswick his residence. He had repeatedly challenged other princes in feuds, but Archbishop Wichmann of Magdeburg, Albrecht of Brandenburg, Landgrave Louis III of Thuringia, and Archbishop Rainald of Cologne offered repeated resistance. It is not completely certain that Duke Henry's refusal of aid to Frederick in 1176 was the sole cause of his downfall. Apparently his manifold breach of the peace of the land caused the Emperor to accuse him, to conquer Lübeck, and, in 1180, through a council of the princes in Gelnhausen, to depose him. Henry lost his dukedom; Westphalia was given to the Archbishop of Cologne, and Bavaria was granted to Otto of Wittelsbach. Henry, who was married to Mathilde of England, went in exile to King Henry II of England. As a result of Henry the Lion's trial, the feudal system was made a still stronger basis of the imperial constitution. Thereafter, only those princes who had received their land directly from the Emperor were admitted to the exclusive circle of imperial princes (Reichsfürsten). Barbarossa elevated the princes of Pomerania to dukes, and the counts of Andechs became the dukes of
Merania (in the neighbourhood of Trieste). Steiermark became a dukedom. Another important measure of Barbarossa was the elevation of the Bishop of Würzburg to duke of Franconia in 1168.

Barbarossa had attempted to hold the increasing power of the princes in check. By 1152 he had found a solution for the area of Burgundy, which also belonged to the empire. He made Duke Berthold IV of Zähringen his representative for

the dukedom of Burgundy as far as the Mediterranean and married Béatrix, the daughter of Count Rainald of Burgundy (1156). Barbarossa attempted to build his own imperial territory between the areas controlled by the princes. This territory was composed of castles, cities, landholdings, ministerial seats, and single
rights that were more or less thickly scattered from Swabia to Thuringia. This large territory was ruled by imperial ministerials ( ministeriales imperii). These men had great power because many of them belonged to the Emperor's circle. The most famous of them was Kuno of Münzenberg, whose castle is preserved in the Wetterau north of Frankfurt and who founded the town of Friedberg. The territorial "peace laws" belong to his efforts to keep the Emperor in power.

Chivalry gave Barbarossa's time a special stamp. He expressed his enthusiasm for knighthood as the ideal way of life at the festival of Pentecost at Mainz in 1184, where he dubbed his sons knights. This festival was surpassed by the "Diet of Jesus Christ" in 1188, when the margravate of Namur was transformed into an imperial principality. More important was Barbarossa's call to the Third Crusade in the spring of 1189 to free Jerusalem from Saladin's army, which had captured it in 1187. Before his departure he returned the former possessions of the Countess Mathilde of Tuscany, a part of the papal state, to the Pope. In 1190 the Emperor drowned while trying to cross the Saleph River.

Assessment.

Frederick Barbarossa had attempted to continue the imperial policy of the rulers of the Saxon and Salian lines. His state was still founded upon the noble, the high noble, and above all the newly founded rank of the imperial servants. The imperial cities in Germany were governed by royal officials (advocatis sculteti), and the citizens had their part in the government. The cities played no role in politics. Frederick had to recognize that the church, after the quarrel of investiture, had become a firmly controlled institution, with its powers strictly defined by law. The church had joined itself to the struggle for freedom of the economically powerful states in upper Italy. Pope Alexander III was able to force the kings of Europe (especially Louis VII of France) not to enter into a political agreement with Barbarossa. Only Philip II Augustus of France signed a treaty with Barbarossa in order to free himself from the pressures created by the Anglo-Norman occupation on the mainland. There was no chance that a continuation and increase of the imperial policy in the territories controlled by the empire would have broken the power of the princes. Germany developed into a system of territorial states after Barbarossa's death, while France developed
during the time of Philip II Augustus into a centralized monarchial state. Barbarossa had a strong feeling for law and imperial prestige. His steadfast opposition to the popes and to Henry the Lion made him the symbol of German unity in the romantic glorification of the 19th century. People since the 14th century believed he was sleeping in the imperial castle of Kyffhäuser and hoped for his return. A monument to him was erected there during the years 1890-96.

BRITANICA

Frederick I (Holy Roman Empire), called Frederick Barbarossa (1123?-90), Holy Roman emperor and king of Germany (1152-90), king of Italy (1155-90), and as Frederick III, duke of Swabia (1147-52, 1167-68). He was born in Waiblingen, the son of Frederick II of Hohenstaufen, duke of Swabia (1090-1147), and the nephew of Conrad III, king of Germany. Conrad III, favoring Frederick over his own son, on his deathbed recommended to the German princes that Frederick be chosen for the German kingship and the imperial throne. Accordingly, after the death of his uncle in 1152, Frederick Barbarossa was made German king and elected Holy Roman emperor. He conceived of his imperial title as a grant from God, through the German princes, and wished to restore the glory of the Roman Empire. He consequently decided to consolidate the imperial position in Germany and Italy and began by issuing a general order for peace among the princes of Germany, at the same time granting them extensive concessions. In 1154 he proceeded to Italy, where he received the Lombard crown at Pavia. The following year he was crowned Holy Roman emperor by Pope Adrian IV, whose authority Frederick had reinstated before his coronation.

In 1156 Pope Adrian aroused Frederick against the papacy by implying in a letter to him that the emperor held lands only as a fief from the pope. Two years later Frederick incurred the hostility of the Lombards by demanding recognition of all his royal rights, including his power to appoint the imperial podesta, or governor, in every town. Such cities as Milan, Piacenza, Brescia, and Crema considered that demand a denial of their communal liberties and in 1158 began a struggle that lasted until 1183 and required Frederick to lead five expeditions to Italy. Between 1158 and 1162 Frederick warred with Milan and its allies, subduing that city and confirming claims to other Italian cities. Meanwhile Frederick had set up a series of antipopes in opposition to the reigning pope, Alexander III, who espoused the cause of the Milanese and their allies and who, in 1165, excommunicated Frederick. By attacking the Leonine City in Rome in 1167-68, Frederick was able to install one of the antipopes, Paschal III (died 1168), on the papal throne. The Lombard League, consisting of the cities of Milan, Parma, Padua, Verona, Piacenza, Bologna, Cremona, Mantua, Bergamo, and Brescia, was formed in 1167 and eventually acknowledged Pope Alexander as leader. During the next seven years the league acquired military strength, rebuilt Milan, constructed the fortress city of Alessandria, and organized a federal system of administration. The fifth expedition (1174-76) of Frederick to Italy terminated in defeat by the Lombard League at Legnano. The defeat was significant in military history, because it was the first major triumph of infantry over a mounted army of feudal knights. Frederick was forced in 1177 to acknowledge Alexander III as pope and in 1183 to sign the Peace of Constance, acceding to the demands of the Lombards for autonomy but retaining imperial suzerainty over the towns.

Although imperial control in Italy was virtually ended by his defeat at Legnano, Frederick managed to enhance his prestige in central Europe. He made Poland tributary to the empire, raised Bohemia to the rank of a kingdom, and erected the margravate of Austria into an independent hereditary duchy. His own power as emperor in Germany was firmly established in 1180, when he ended his long

struggle with the Welfs by putting down a revolt led by the Welf Henry the Lion and depriving him of most of his lands.

Frederick initiated the Third Crusade in 1189, and in the next year, having resigned the government of the empire to his son Henry, later Holy Roman Emperor Henry VI, set out for Asia Minor. After gaining two great victories over the Muslims at Philomelion (now Aksehir) and Iconium (now Konya), he was drowned in the Calycadnus (now Göksu) River in Cilicia (now in Turkey) on June 10, 1190.

Children of Federico (Emperador Rom Germinico) and Beatriz (Emperatriz Rom Ger) are:

i. Enrique VI (Emperador Romano Germánico), born 1165 in Nijmegen, Holanda; died 28 Septiembre 1197 in Messina, Italia; married Constanza de Sicilia (Emperatriz Rom Ger) 1186; born 1154; died 27 Noviembre 1198 in Palermo, Italia.

Notes for Enrique VI (Emperador Romano Germánico):
Enrique Vl. (1165-1197). Emperador de Alemania. En 1190 se convirtió en rey de Alemania y en 1194 de Sicilia. Fue coronado emperador del Sacro Imperio Romano-Germánico en 1191. Su matrimonio con Constancia de Sicilia le abrió las puertas de ese reino y del sur de Italia. No pudo tomar Nápoles. Dominó el Reino de las Dos Sicilias y tuvo a Ricardo I de Inglaterra como rehen. Murió tratando de dirigir una cruzada contra los moros.

Henry VI (b. autumn 1165, Nijmegen, Neth.--d. Sept. 28, 1197, Messina, Italy), German king and Holy Roman emperor of the Hohenstaufen dynasty who increased his power and that of his dynasty by his acquisition of the kingdom of Sicily through his marriage to Constance I, posthumous daughter of the Sicilian king Roger II. Although Henry failed in his objective of making the German crown hereditary, like the Sicilian crown, his son Frederick II, who became king of
Sicily immediately after Henry VI's death, was subsequently elected Holy Roman emperor.

A son of the emperor Frederick I Barbarossa, Henry was chosen German king at Bamberg in June 1169 and crowned at Aachen in August of that year. He was married to Constance, who was 11

years older than he, in January 1186 in Milan. On the departure of Frederick I for the Holy Land on a crusade at Easter 1189, Henry took over the government of the empire. In 1189-90 he suppressed a revolt of Henry the Lion, former duke of Bavaria and Saxony.

In November 1189, William II of Sicily died, leaving his father's half sister Constance heiress to the Sicilian kingdom, then consisting of the island of Sicily and the southern part of the Italian peninsula. After the death of Frederick I on crusade in June 1190, Henry VI made peace with Henry the Lion and proceeded to Italy, where he was crowned emperor by Pope Celestine III in April 1191.

Meanwhile in Sicily a nationalist party unwilling to be governed by a German emperor chose Tancred, an illegitimate son of Constance's brother Roger, as king of Sicily. After his coronation, Henry, determined to conquer the Sicilian kingdom, besieged Naples. But when Henry the Lion, aided by others, once again revolted, Henry was forced to raise the siege (August 1191) and return
to Germany. The Emperor's position was soon strengthened, however, by the imprisonment of King Richard I of England by Leopold V, duke of Austria, in December 1192. When the Duke turned the English king over to Henry in the following February, Richard, in order to obtain his release, agreed to surrender his kingdom to the Emperor, receive it back as a fief, and pay a ransom of 100,000 silver marks as well as an additional 50,000 marks in lieu of helping Henry conquer the Sicilian kingdom.

Henry the Lion came to terms with the Emperor in March 1194, and Henry VI was then free to turn his attention to Sicily. He had already, in January 1194, concluded the Treaty of Vercelli with the towns of Lombardy, thus ensuring their loyalty. His task was also made easier by the death in February 1194 of Tancred, who left as his heir a mere boy, William III. Thus, when Henry went to Italy in May 1194, he met with little resistance. He entered Palermo on November 20 and was crowned king of Sicily on December 25.

In the winter of 1195-96, Henry induced about 50 princes to agree to make the succession to the crown of the Holy Roman Empire hereditary, and at the Diet of Würzburg (April 1196) a majority voted for it. A minority, however, continued to oppose it, and at the Diet of Erfurt (October 1196) this opposition was increased. Finally, Henry had to be content with the election of his son Frederick as German king in the customary way in December.

In 1197, when Henry was in southern Italy preparing a crusade, a rebellion against his rule broke out in the Sicilian kingdom, which

was put down with savage cruelty. In the same year Henry died of malaria at Messina.

BRITANICA

Notes for Constanza de Sicilia (Emperatriz Rom Ger):
Constance, German KONSTANZE, Italian COSTANZA (b. 1154--d. Nov. 27, 1198, Palermo), queen of Sicily (1194-98) and Holy Roman empress-consort (1191-97), whose marriage to a Hohenstaufen gave that German dynasty a claim to the throne of Sicily and whose political skill preserved the throne for her son.

The daughter of King Roger II of Sicily, Constance married the future emperor Henry VI in 1186 and was crowned with him in Rome in 1191. On the death of her nephew William II (1189), she claimed the Sicilian throne. The Sicilians, however, supported Tancred of Lecce, her natural nephew, who waged war against her and actually held her prisoner. The death of Tancred (1194) allowed Henry and Constance to take the throne of Sicily.

When Henry died in 1197, Constance consolidated her power in the kingdom, secured the protection of Pope Innocent III, and succeeded in having her son, the future emperor Frederick II,crowned king in April 1198.

Notes for Isaac II Angelus Emperador Bizantino:
Isaac II ANGELUS (b. c. 1135--d. February 1204), Byzantine emperor who, although incapable of stemming administrative abuses, partly succeeded, by his defeat of the Serbians in 1190, in retrieving imperial fortunes in the Balkans.

In September 1185 Isaac was unexpectedly proclaimed emperor by the Constantinople mob that murdered his cousin, the emperor Andronicus I Comnenus. His reign was inaugurated by the decisive victory of his general Alexius Branas over the Normans, who, after invading the empire and sacking Thessalonica (1185), were then driven off Greek soil, except for the islands of Cephalonia and Zacynthus (modern Zante). Isaac was unsuccessful, however, in recovering Cyprus from the rebel Isaac Comnenus, who set himself up as an independent ruler of that island in 1185. Isaac II failed to crush the revolt of the Bulgarians and Walachians that broke out toward the end of that year, even though he led expeditions against them in 1186-87. In 1187 he was forced to recognize the second Bulgarian empire.

In 1189 the Byzantine ruler was confronted with the Third Crusade, which, led by German emperor Frederick I Barbarossa, was passing through Byzantine territory. Isaac tried to protect himself by concluding a treaty with Saladin, the sultan of Egypt, but he was soon forced to assist Frederick; he concluded the Treaty of Adrianople with him in February 1190, and in the following month Frederick's forces were transported across the Hellespont to Asia Minor.

Free to turn his attention to the Balkans, Isaac restored Byzantine prestige by defeating Stephen Nemanja of Serbia (1190). With Hungarian help he planned an expedition against the Bulgarians, assembling a Byzantine army for this purpose near the city of Cypsela in the spring of 1195. On April 8, however, he was suddenly overthrown by his brother, who imprisoned and blinded him and assumed the throne as Emperor Alexius III.

In 1201 Isaac's son Alexius made his way to Germany, where he succeeded in bringing about the diversion of the Fourth Crusade to Constantinople in order to restore his father to power. In July 1203 the crusaders captured the city, and on August 1, Isaac, after eight years' imprisonment, was crowned co-emperor with Alexius, who assumed the title Alexius IV. Friction between the crusaders and the townspeople of Constantinople, however, led to a revolution in January 1204; the
co-emperors were dethroned, Alexius IV was assassinated on Feb. 8, 1204, and Isaac died several days later.

Carlos II. I248- 1309. Rey de Nipoles desde 1285 a 1309, disfrutando de la protección papal durante su reinado. Hijo de un rey de las Dos Sicilias que intentó reconquistar Sicilia infructuosamente

Charles II byname CHARLES OF ANJOU, or CHARLES THE LAME, Italian CARLO D'ANGIN, or CARLO LO ZOPPO (b. c. 1254--d. May 5, 1309, Naples), king of Naples and ruler of numerous other territories, who concluded the war to regain Sicily started by his father, Charles I. By making astute alliances and treaties, he greatly enlarged his dominions.

Named prince of Salerno (1269) by his father and married by him to Maria, daughter of the king of Hungary (1270), Charles was engaged in acquiring more lands and titles when his father lost Sicily to the Aragonese (1282). When Charles I initiated his ill-fated campaign to regain Sicily, Charles of Salerno was in charge of Naples during his father's absence. In 1284, he was lured out of the port of Naples by the enemy's admiral, Ruggiero di Lauria, and was captured.

Charles I died (1285) during his son's imprisonment, and it was not until 1288 that Charles II was able to arrange his release, using Edward I of England and Pope Nicholas IV as intermediaries. Charles promised to give up his claim to Sicily, but, once released, the Pope absolved him from his promise and the war for Sicily continued. It was resolved by the Peace of Caltabellotta (1302), under which Charles agreed to give up his claim to Sicily during the lifetime of Frederick III of Aragon (ruled Sicily 1296-1337).

Thenceforth Charles carefully built up an extremely complex set of alliances, usually by arranging the marriages of his children. In that way he increased or extended his control over Piedmont, Provence, Hungary, Athens, and Albania, among other territories.

Charles was considered an extremely pious man, closely allied with the church. Ruling over an enlightened court, he eliminated many of his father's harsh measures. He is also noted for making Naples into something of a European capital by fostering trade and the arts, patronizing the university, and building monasteries and churches.

Notes for Urraca (Reina de Castilla):
Urraca (b. 1077-81--d. March 8, 1126, Saldana, Castile [Spain]), queen of Leon and Castile from 1109 to 1126, daughter of Alfonso VI.

Urraca became her father's heiress when her brother, Sancho, was killed at Uclés (1108). She was the widow of Count Raymond of Burgundy, by whom she had had one son, Alfonso Ramkrez (born 1104), the future Alfonso VII. To counterbalance--it was hoped--the dangers of a female succession during the Almoravid crisis, Urraca's marriage to her second cousin, Alfonso I of Aragon, was arranged (1109). This marriage, instead of producing political stability in Urraca's kingdom, led to years of anarchy. Urraca and her husband, according to the marriage settlement, became corulers in each other's lands, and Alfonso thereupon put Aragonese garrisons into many Leonese and Castilian cities. The notion of an Aragonese-Castilian political union was, however,
premature, and although Urraca's municipalities tended to accept the Aragonese king, the magnates were hostile. Civil war broke out and continued for years, many supporting the claims of the child Alfonso Ramkrez to the throne. Matters were further complicated by the temperamental incompatibility of Urraca and her husband, who soon quarreled. Pope Paschal II, moreover, declared their marriage canonically invalid. They finally separated in 1114, though the Aragonese king continued for some years thereafter to keep his garrisons in Castile and to use the royal title.

Struggles also continued between nobles and municipalities, between rival bands of magnates, between the archbishops of Santiago and Toledo, and between the former, the bishop Diego Gelmkrez, and Urraca herself. Alfonso Ramkrez was crowned by Gelmkrez in 1111, and his reign in Galicia began effectively--despite Urraca's intermittent but active opposition--in 1116. Urraca's death in 1126 ended a disastrous episode in the medieval political history of Christian Spain.

Ramon Berenguer III, byname RAMON BERENGUER THE GREAT, Catalan RAMON BERENGUER EL GRAN (b. 1082--d. 1131, Barcelona [Spain]), count of Barcelona during whose reign, (1097-1131) independent Catalonia reached the summit of its historical greatness, spreading its ships over the western Mediterranean and acquiring new lands from the southern Pyrennees to Provence. He was also known as Ramon Berenguer I of Provence.

The Cid's daughter, Marka Sol, married Ramón Berenguer III.

The son of Ramon Berenguer II, he took the throne on the departure of his uncle, Berenguer Ramon II, on crusade and spent his early years fighting off Almoravid Muslims, whose armies approached the very walls of Barcelona. Thereafter, his expansionist campaigns began. In 1111 he conquered the county of Besals and, by his marriage to Douce (or Dolea) of Provence in 1112, acquired the county of Provence. In the years 1114-15 he undertook, with the Pisans, a joint expedition against the Balearic Islands, liberating thousands of Christian slaves and destroying the Moors' piratical bases. Commerce thereafter flourished between Barcelona, Marseille, Genoa, and Pisa. The following year (1116) he sailed to Rome in an attempt to gain aid from the Italian states and to acquire a license from the Pope for his crusade in Spain, but the visit was largely unsuccessful. In 1117 he inherited the old county of Cerdana in the Pyrenees.

On his death, Provence went to his younger son, Berenguer Ramon (as Berenguer Ramon I of Provence, reigning 1131-44); and the rest of the lands, the most important ones, went to the elderson, Ramon Berenguer IV.

Notes for Garcka IV (ó V) El Restaurador (Rey de Navarra):
Garcka IV (or V), byname GARCKA THE RESTORER, Spanish GARCKA EL RESTAURADOR (d. Nov. 21, 1150, Lorca, Navarre [Spain]), king of Pamplona (Navarre) from 1134 to 1150, son of El Cid's daughter Cristina and Ramiro Sinchez, lord of Monzón.

When Alfonso I of Aragon and Navarre died in 1134 and the Aragonese proclaimed the succession for his brother Ramiro II, the Navarrese rebelled and restored their own ancient line in the person of Garcka Ramirez. Garcka IV broke the union of Aragon and Navarre by declaring himself a vassal of Alfonso VII of Castile, "emperor" of Spain, but a year later he broke with Castile and allied himself with the Portuguese against Castile and Aragon. After Ramiro's abdication (1137), there ensued a period of warfare and intrigue among the kingdoms of Spain, ending in 1149. In spite of these wars Garcka IV collaborated with Alfonso VII against the Muslim Almohads and took part in the conquest of Almeria (1147). On his death, he was succeeded by his son Sancho VI.

Sancho VI, byname SANCHO THE WISE, Spanish SANCHO EL SABIO (d. June 27, 1194), king of Navarre (Pamplona) from 1150 and son of García IV (or V) the Restorer.

Sancho was the first to be called king of Navarre; previous kings were known as kings of Pamplona. In 1151 Castile and Aragon signed at Tudillén a treaty for the partition of Navarre. By skilled diplomacy Sancho avoided the destruction of his kingdom, accepting Alfonso VII of Castile as his overlord and marrying Alfonso's daughter. He himself intervened in Castilian affairs during the minority (1158-70) of Alfonso VIII. In 1176 both countries submitted their longstanding territorial disputes to Henry II of England as arbiter, who assigned Rioja to Castile. Sancho accepted this decision. He was a legislator of importance, conceding many municipal fueros (charters) and protecting Jews and immigrants (francos) from the north.

Notes for Geoffrey IV Plantagenet:
Geoffrey IV, also called GEOFFREY PLANTAGENET, byname GEOFFREY THE FAIR, French GEOFFROI PLANTAGENET, or GEOFFROI LE BEL (b. Aug. 24, 1113--d. Sept. 7, 1151, Le Mans, Maine [France]), count of Anjou (1131-51), Maine, and Touraine and ancestor of the Plantagenet kings of England through his marriage, in June 1128, to Matilda (q.v.), daughter of Henry I of England. On Henry's death (1135), Geoffrey claimed the duchy of Normandy; he finally conquered it in 1144 and ruled there as duke until he gave it to his son Henry (later King Henry II of England) in 1150.

Geoffrey was popular with the Normans, but he had to suppress a rebellion of malcontent Angevin nobles. After a short war with Louis VII of France, Geoffrey signed a treaty (August 1151) by which he surrendered the whole of Norman Vexin (the border area between Normandy and Ile-de-France) to Louis.

Notes for William X, Of Aquitane:
William X (b. 1099, Toulouse, Fr.--d. April 9, 1137, Santiago de Compostela, Spain), duke of Aquitaine and of Gascony (1127-37), son of William IX.

In 1131 he recognized the antipope Anaclet and supported him until 1134. In 1136 he ravaged Normandy. The following year he went on a pilgrimage to Santiago de Compostela in Galicia, where he died. His daughter, Eleanor of Aquitaine, inherited all his lands and, first, through her marriage to Louis VII of France, united Aquitaine with the Capetian line and, then, through her marriage to Duke Henry of Normandy (the future Henry II of England) united Aquitaine to the
Plantagenet line.

Peter II, byname PETER THE CATHOLIC, Spanish PEDRO EL CATÓLICO (b. 1174--d. Sept. 12, 1213, Muret, Fr.), king of Aragon from 1196 to 1213, the eldest son and successor of Alfonso II.

Peter married (1204) Mary, lady of Montpellier, and thus greatly extended Aragonese power in southern France. Despite the violent objections of his subjects, he had himself crowned by Pope Innocent III in Rome and declared his kingdom a feudatory of the Holy See (1204). Peter, with other Spanish kings, took a prominent part in the victory over the Moors at Las Navas de Tolosa (July 16, 1212); but he then went to support his brother-in-law Raymond VI of Toulouse against the crusader Simon de Montfort in Languedoc. There he was killed in the Battle of Muret. His son James I succeeded him.

Notes for Andrés II (Rey de Hungrka):
Andrew II, Hungarian ENDRE, or ANDRAS (b. 1175--d. Oct. 26, 1235), king of Hungary (1205-35) whose reign was marked by controversy with barons and

the great feudatories and by the issuance of the Golden Bull of 1222 (q.v.), which has been called the Hungarian Magna Carta.

Son of Béla III, Andrew succeeded Liszló III, his elder brother's son, on the throne in 1205. Powerful landed interests forced Andrew to spend royal funds so recklessly that the crown was soon impoverished and dependent on the feudatories, who soon reduced Hungary to a state of near anarchy. Objecting to the prodigality of the German followers of Andrew's first wife, Gertrude of Meran, rebellious nobles murdered her in 1213. Four years later, with an army of
15,000 men, Andrew set off on an ill-fated Crusade to the Holy Land. After his return the barons forced him to agree to the Golden Bull, which became an important source of the Hungarian constitution. It limited royal rights and prerogatives, confirmed basic rights of smallholders and nobles, guaranteed justice for all, and promised to improve the coinage. Under it, nobles had the right to resist by force any royal decree.

During Andrew's reign the Teutonic Knights, who had occupied parts of Transylvania for 14 years, came into conflict with both royal and ecclesiastical authority, and the order was expelled from Hungary in 1225. Andrew's daughter by Gertrude was canonized as St. Elizabeth of Hungary.

ii. Bela IV (Rey de Hungría), born 1206; died 1270; married María (Reina de Hungría); born Abt. 1220.

Notes for Bela IV (Rey de Hungría):
Béla IV (b. 1206--d. May 3, 1270), king of Hungary (1235-70) during whose reign the Mongol invasions left three-quarters of Hungary in ruins. He was the son of Andrew II.

Routed on the banks of the Sajó River in 1241 by Mongols under Batu Khan, Béla fled to Dalmatia, and for a year the kingdom of Hungary did not exist. So nearly complete was the country's destruction that Hungarians, when referring to total calamity, use the word tatárjárás,meaning Tatar invasion.

When the Mongols withdrew because of dynastic troubles, Béla began to reconstruct his realm, a task that occupied the rest of his reign. Particularly difficult was the recovery of western portions of the kingdom seized by Frederick of Austria as the price of the aid he promised against the Mongols but never delivered. Béla defeated Frederick, who died in the battle near the Leitha River on June 15, 1246. Three years earlier Béla had been forced to cede Zadar to Venice, but he retained Split and other Dalmatian

provinces. Because of his policy of religious toleration in Bosnia, that provinceremained quiet for years.

Béla fought wars with the new Serbian kingdom, founded by the Nemanja dynasty, and was frequently in conflict with Otakar II over Styria, which ultimately fell to the Bohemians. Béla turned back a second Mongol invasion of Hungary, in 1261, and he resisted the Premyslid dynasty, which had constructed a new Bohemian empire, absorbing territories of the Austrian Babenbergs and threatening Hungary itself. Béla had two sons and seven daughters by his consort, Maria, daughter of the Byzantine emperor of Nicaea, Theodore II Lascaris. Of these children, St. Margaret of Hungary became the best known.

Sancho I, byname SANCHO THE FOUNDER, or THE POPULATOR, Portuguese SANCHO O FUNADOR, or O POVOADOR (b. 1154, Coimbra, Port.--d. March 26, 1211), second king of Portugal (1185-1211), son of Afonso I.

Sancho's reign was marked by a resettlement of the depopulated areas of his country, by the establishment of new towns, and by the rebuilding of frontier strongholds and castles. To facilitate his plans, he encouraged foreign settlers and enlisted bishops, religious orders, and nobles in his colonization projects, granting vast territories to the military orders (the Hospitalers, the Templars, the Orders of Calatrava and Santiago). After an invasion by the Almohad prince Abu Yusuf Ya'qub al- Mansur, Sancho used the help of a passing crusader fleet to capture Silves from the Moors (1189), but lost it (1191) and other lands south of the Tagus River when al-Mansur again attacked. Sancho quarreled both with his bishops and with Rome over the payment of tribute.

En medio de sus guerras con Castilla encontró tiempo para su mayor hazaña como gobernante: la fundación de la Universidad de Salamanca, la más famosa institución de estudios del mundo hispano.

Alfonso IX (b. 1171, Zamora, Leon--d. Sept. 24, 1230, Villanueva de Sarria, Galicia), king of Leon from 1188 to 1230, son of Ferdinand II of Leon and cousin of Alfonso VIII of Castile (next to whom he is numbered as a junior member of the family). A forceful personality, Alfonso IX was determined to recover Leonese territory lost to Castile; and, despite the fact that he had done homage to Alfonso VIII, he did not hesitate to ally himself with the Almohads to further this end. As
a result, his kingdom was placed under papal interdiction, and he was finally compelled to marry the Castilian king's eldest daughter. He refused, however, to join his father-in-law in the crusade against the Almohads in 1212 unless the lost lands were first restored by Castile. This was not done and the Leonese army was, therefore, absent from Las Navas de Tolosa. Nevertheless, operating on his own, Alfonso IX won important victories beyond the southern frontiers of Leon, taking Cáceres (1227) and Mérida and Badajoz (1230) from the Almohads. These victories opened the road for a future reconquest of Seville.

Alfonso IX (1166?-1230), king of León (1188-1230). In 1197 he married Berengaria, daughter of his first cousin King Alfonso VIII of Castile and granddaughter of King Henry II of England. Pope Innocent III annulled the marriage in 1214 because of the family relationship of Alfonso and Berengaria. Alfonso founded the

University of Salamanca and captured Cáceres, Badajoz, and Mérida from the Muslim Almohads.

Notes for Federico II (Emperador Romano Germinico):
Frederick II (b. Dec. 26, 1194, Jesi, Ancona, Papal States--d. Dec. 13, 1250, Castel Fiorentino, Apulia, Kingdom of Sicily), king of Sicily (1197-1250), duke of Swabia (as Frederick VI, 1228-35), German king (1212-50), and Holy Roman emperor (1220-50). A Hohenstaufen and grandson of Frederick I Barbarossa, he pursued his dynasty's imperial policies against the papacy and the Italian city states; and he also joined in the Sixth Crusade (1228-29), conquering several areas of the Holy Land and crowning himself king of Jerusalem (reigning 1229-43).

Early years.

In 1196, Frederick, at the age of two, was elected king by the German princes at Frankfort. His father, however, failed in his attempt to gain the princes' support to make Frederick's succession hereditary. Just before embarking on a crusade to the Holy Land, Emperor Henry died in September 1197 after a brief illness, only 32 years old. Though the medieval Roman Empire was at the height of its strength, the Emperor's death brought it close to dissolution.

After the death of her husband, Empress Constance had young Frederick brought to Sicily, where in May 1198 he was crowned king of Sicily. Before her death later that year, Constance loosened the bonds that joined Sicily to the empire and to Germany by appointing Pope Innocent III her son's guardian as well as regent of the Kingdom of Sicily, which was already under papal suzerainty. In Germany two rival kings were elected, Frederick's uncle Philip of Swabia
and Otto of Brunswick, as Otto IV.

Even the Pope, however, did not succeed in protecting Sicily from many years of anarchy. German and papal captains, local barons, and Sicilian Saracens, as well as the cities of Genoa and Pisa, fought for mastery of the country. The situation was not stabilized until the imperial chancellor conquered Palermo in November 1206 and governed in Frederick's name. In December 1208 Frederick, then 14, was declared of age.

In 1209 he married the much older Constance of Aragon, who brought him an urgently needed troop of knights with whose help he gained control of Sicily, defeated a conspiracy of the barons, and was partially successful in regaining the crown properties that had been lost during his minority. At this time his relations with the Pope began to show signs of strain.

Frederick's Sicilian efforts were seriously endangered when at the end of 1210 Otto IV invaded the realm on the mainland and in 1211 even threatened Sicily itself. Otto withdrew, however, when in September 1211 a number of German princes deposed him and elected Frederick king.

Before leaving for Germany in March 1212, Frederick had his one-year-old son Henry VII crowned king of Sicily and granted various privileges to the Holy See. Having rapidly conquered south Germany, where he met almost no opposition, Frederick was elected once again king of Germany by a large majority of princes at Frankfurt in December 1212 and crowned a few days later. In the same year he concluded an alliance with France against Otto, who was decisively defeated at the Battle of Bouvines in July 1214.

Consolidation of the empire.

In April 1220 Frederick's nine-year-old son Henry VII was elected king by the German princes, thus negating Frederick's promise to Pope Innocent that he would relinquish control of Sicily in favour of Henry, for it meant that Sicily and Germany would eventually be united under one ruler. Although Frederick sought to exonerate himself with Pope Honorius III by claiming that the election had been held without his knowledge, he had to pay for it by surrendering extensive royal prerogatives to the German ecclesiastical princes.

Crowned emperor by the Pope in St. Peter's Church, in Rome, on Nov. 22, 1220, Frederick confirmed on the same day the legal separation of the empire from the Kingdom of Sicily while continuing the existing personal union. In addition, he granted important privileges to the Italian ecclesiastics and issued laws against heretics, and it seemed indeed that harmony had been reestablished between the Emperor and the Pope for some years to come. Frederick spent the
following years consolidating his rule in Sicily. He broke the resistance of the barons to revocation of certain of their privileges and defeated the rebellious Saracens (1222-24), whom he later resettled in Apulia where they became his most faithful subjects, providing him with a loyal bodyguard immune against papal influence.

In addition to erecting a chain of castles and border fortifications, he had enlarged the harbours of his kingdom and established a navy and a fleet of merchant vessels. He instituted measures designed to bring trade under state control and make the manufacture of certain products the monopoly of the state. Finally, he created a civil service for which candidates were trained at the first European state university, in Naples, which he himself founded in 1224.

Years as a crusader.

In the meantime, the Pope was reminding the Emperor of the crusading vows he had taken at his coronations in 1212 and 1220. Frederick, however, was inclined to postpone such a venture until the Italian problems had been resolved. He claimed the Kingdom of Jerusalem for himself through his marriage to Isabella (Yolande) of Brienne, the heiress of the titular king of Jerusalem, who had become his wife in 1225 after Constance had died in 1222. Before embarking for the Holy Land, Frederick convened an imperial diet for Easter 1226 in Cremona, in northern Italy, in order to reinforce certain imperial rights in Italy and to prepare for the crusade. The cities of Lombardy, however, reconstituted themselves, under the leadership of Milan, as the Lombard League, and not only sabotaged the diet at Cremona but effectively opposed rederick's reorganization of northern Italy.

In September 1227, when Frederick was at last ready to embark from Brindisi for the Holy Land,an epidemic broke out among the crusaders. The new pope, Gregory IX, a passionate man who belonged to the intellectual world of Francis of Assisi--his personal friend whom he canonized as early as 1228--brushed aside Frederick's justification and excommunicated him for his failure to carry out the crusade.

In June 1228, ignoring the excommunication, Frederick set sail from Brindisi. In the Holy Land, following complex negotiations, he obtained Jerusalem, Bethlehem, and Nazareth from the Sultan al- Kamil of Egypt. It was certainly the impact of Frederick's personality on the Arab world, and not armed might, that made this treaty possible. On March 18, 1229, the excommunicated emperor crowned himself king of Jerusalem in the Church of the Holy Sepulchre. This was the high point as well as the turning point of Frederick's conception of sovereignty. Eschatological prophecies concerning his rule were now made, and the Emperor considered himself to be a messiah, a new David. His entry into Jerusalem was compared with that of Christ on Palm Sunday, and, indeed, in a
manifesto the Emperor, too, compared himself to Christ.

In the meantime, however, papal troops had penetrated into the Kingdom of Sicily. Frederick returned at once and reconquered the lost areas but did not in turn attack the Papal States. His diplomacy was rewarded: after the Treaty of San Germano (July 1230) he was absolved from excommunication the following month at Ceprano.

In August 1231, at Melfi, the Emperor issued his new constitutions for the Kingdom of Sicily. Not since the reign of the Byzantine emperor Justinian in the 6th century had the administrative law of a European state been codified. Frederick's codes contained many ideas that anticipated enlightened absolutism and the centralization of the state. During the same time, however, Frederick could not prevent his son, the German king Henry VII, from making a number of
important concessions to the German princes. These concessions, confirmed by Frederick in 1232 at the diet of Cividale, strengthened the rule of the princes at the expense of the central power of the empire. These and other steps set

back the development of communal self-government in Germany and furthered the independence of the principalities. In the meantime, relations between Frederick
and Henry VII deteriorated steadily. Henry had been ruling independently in Germany since 1228, when in December 1234 he entered into an alliance with the Lombard League. This action amounted to high treason in the eyes of the Emperor. On Frederick's arrival in Germany, his son's rebellion collapsed; he died in a prison in Calabria in 1242.

His second wife having died in 1228, Frederick in July 1235 married Isabella of England. Shortly thereafter, he issued an edict of imperial peace, which also called for the appointment of a chief justice of the imperial court in order to protect the sovereign rights of the emperor from further erosion.

After some military successes in Lombardy against the Lombard League, the Emperor returned to Germany in 1236 to remove the rebellious duke Frederick of Austria and Styria from rule. In February 1237 he had his nine-year-old son Conrad IV elected king of Germany in Vienna. After several more months in Germany--it was to be his last visit--he descended into northern Italy. He defeated the Lombard League at Cortenuova, but, misjudging his strength, he rejected all Milanese peace overtures and insisted on unconditional surrender. It was a moment of grave historic importance when Frederick's hatred coloured his judgment and blocked all possibilities of a peaceful settlement.

Struggle with the papacy.

Milan and five other cities held out, and in October 1238 he had to raise the siege of Brescia. In the same year the marriage of Frederick's natural son Enzio with the Sardinian princess Adelasia and the designation of Enzio as king of Sardinia, in which the papacy claimed suzerainty, led to the final break with the Pope. Gregory IX deeply distrusted Frederick both in religious and political matters: Frederick was supposed to have jested that Moses, Christ, and Muhammad were three impostors who had themselves been hoodwinked; and in the political arena the Pope was fearful that the Papal States were about to be isolated and encircled, particularly because a pro-imperial party had been formed in Rome. Under the pretext that the Emperor intended to drive him from Rome, Gregory excommunicated Frederick for the second time on Palm Sunday, March 20, 1239. This was the beginning of the last phase of the gigantic struggle between the papacy and the empire; it ended with the death of the Emperor and the downfall of his house.

Frederick countered the excommunication with a number of important manifestos, most of them composed by Pietro della Vigna, a member of the imperial hancery, who had outstanding literary gifts. The manifesto emphasized that the cardinals were meant to participate in the leadership of the church, and Frederick even tried to evoke solidarity among the secular princes. He also, however, intensified his military activities in northern Italy. In order to finance his constantly growing need for arms, he instituted a thorough administrative reorganization of imperial Italy (among others, the formation of 10 vice regencies) and of the Kingdom of Sicily. In addition, he decreed the rigorous

surveillance of the population. In central Italy he took the offensive, occupying the March of Ancona and the Duchy of Spoleto, and in February 1240 his army marched into the Papal States and threatened Rome. At the last moment, however, the Pope won the support of the Romans.

Following the defeat of a Genoese fleet bringing delegates for a papal council to Rome, more than 100 high-ranking ecclesiastics--cardinals and bishops among them--were taken as Frederick's prisoners to Apulia. This military victory proved, however, to be a political disadvantage: it provided material for propaganda depicting Frederick as an oppressor of the church.

While still encamped before Rome, Frederick received the news of Pope Gregory's death and thereupon withdrew to Sicily. In the meantime, the Mongols had invaded Europe. They were temporarily halted in the extremely bloody Battle of Liegnitz in Silesia on April 9, 1241, but probably only the sudden death of their leader, the great khan Ögödei, prevented further Mongol advances at that time.

Celestine IV's brief pontificate was followed by a long interregnum. When in 1243 Innocent IV was elected, Frederick, at the urging of the German princes and of King Louis IX of France, opened negotiations with the new pope. Agreement between the Pope and the Emperor seemed close on the evacuation of the Papal States, when in June 1244 Innocent fled the city. In Lyon he convened a council for 1245 and in July of that year deposed the Emperor, the obstacle to
reconciliation apparently being the status of the Lombard communes.

The battle between the Emperor and the papacy then raged in full fury; on the papal side the Emperor was branded as the precursor of the anti-Christ; on the imperial side he was hailed as a messiah. The Emperor supported the contemporary demand that the church return to the poverty and saintliness of the early Christian community and again appealed to the princes of Europe to join
in a defensive league against the power-hungry prelates. Most of the princes, however, remained neutral, and, although two successive German antikings received little support, the Emperor steadily lost ground in Germany.

In May 1247 Frederick's planned journey to Lyon in order to plead his own case before the papal council was interrupted by the revolt of the strategically placed city of Parma. In the wake of this debacle much of central Italy and the Romagna was lost. The following year the Emperor was to suffer further blows of fate; Pietro della Vigna, for many years the Emperor's confidant, was accused
of treason and committed suicide in prison. In May 1249 King Enzio of Sardinia, Frederick's favourite son, was captured by the Bolognese and was kept incarcerated until his death in 1272.

The Emperor's position, both in Italy and--through the efforts of his son, Conrad IV--in Germany, was improving when he died unexpectedly in 1250. He was

buried in the cathedral of Palermo near his first wife, his parents, and his Norman grandfather.

When the news of his death was published, all Europe was deeply shaken. Doubts arose that he was really dead; false Fredericks appeared everywhere; in Sicily a legend grew that he had been conveyed to the Aetna volcano; in Germany that he was encapsuled in a mountain and would return as the latter-day emperor to punish the worldly church and peacefully reestablish the Holy Roman Empire. Yet he was also thought to live on in his heirs. In fact, however, within 22 years after his death, all of them were dead: victims of the battle with the papacy that their father had begun.

Assessment.

Frederick's character was marked by sharp contradictions, undoubtedly the result of his insecure and emotionally barren childhood. Enchanting amiability and gaiety were paired with cruelty; harshness and rigidity existed side by side with superior intelligence and a keen sense of reality; tolerance and intolerance went hand in hand; impulsive sensuality did not stand in the way of genuine piety; imbalance and inner discord pervaded his personality and his achievements.

Frederick cannot be considered the first modern man on the throne, nor a pioneer of the Renaissance, as some historians have maintained. Though his gifted personality heralded some of the intellectual trends of later times, he was, all in all, a man of the Middle Ages. He had indeed had the good fortune to have grown up in Sicily in a mixed culture that uniquely combined elements of antiquity, Arabic and Jewish wisdom, the Occidental spirit of the Middle Ages, and Norman realism. The intellectual life of his court reflected this heritage. A courtly "republic of scholars," it nurtured and fostered the natural sciences as well as philosophy, poetry, and mathematics, and translations as well as original writing, both in Latin and in the vernacular. The pursuit of knowledge without special respect for traditional authorities was characteristic of Frederick and his court.

Witness to the intellectual vigour and distinction of Frederick himself and those around him are the content and style of his great legal codices and manifestos, many of them serving as examples to later generations; the edifices he erected, particularly the classic style of the Castello del Monte--a fusion of poetry and mathematics in stone; and, most outstanding, his own work De arte venandi cum
avibus, a standard work on falconry based entirely on his own experimental research.

Frederick's concept of the emperor's function was rooted in the ideology of the late Greco-Roman period and the Judeo-Christian philosophy of the Middle Ages, emphasizing the sacredness and universal character of the office. In the light of it, Frederick claimed preeminence for the emperor over all other secular rulers--undoubtedly an ill-timed claim in an age when separate nation-states

were developing. Thus, Frederick's policies, full of intellectual and political promise, were in actuality dogged by tragedy.

BRITANICA

Frederick II (Holy Roman Empire) (1194-1250), Holy Roman emperor (1215-50) and as Frederick I, king of Sicily (1198-1212).

Born in Lesi, Italy, on December 26, 1194, Frederick was the son of Henry VI and grandson of Frederick I, Holy Roman emperor. He was made German king in 1196 and on the death of his father two years later became king of Sicily. When his mother, Constance of Sicily (1146-98), acting as regent, died several months later, the four-year-old prince was placed under the guardianship of Pope Innocent III, the new regent of Sicily. Emperor Otto IV was deposed in 1211, and the German princes selected Frederick to replace him. A contest for the imperial throne ensued, because Otto was unwilling to relinquish the crown. Supported by the papacy, to which he promised many concessions, and aided by the French, Frederick was eventually secure in his title. He was crowned king of Germany at Aix-la-Chapelle (now Aachen, Germany) in 1215 and Holy Roman emperor at Rome in 1220.

On his coronation Frederick made a number of elaborate promises to the church, including a vow that he would go on a Crusade. He postponed the Crusade, however, because of an outbreak of anarchy in Sicily and because of the resistance of the Lombard cities, which in 1226 renewed the Lombard League, originally formed against his grandfather, Frederick I. The following year Frederick annulled the Treaty of Constance and put the Lombard cities under the ban of the empire. Threatened several times with excommunication if he did not fulfill his coronation pledge, Frederick determined to sail for Jerusalem in 1227. An epidemic forced him to return three days after his departure, whereupon Pope Gregory IX declared him excommunicated. In 1228 Frederick led the Fifth Crusade to the Holy Land, where he took Jerusalem and concluded a 10-year truce with the sultan of Egypt. Having married Yolande (1212-28?), the young daughter of the titular king of Jerusalem, John of Brienne, and having assumed his title upon her death, Frederick was crowned king of Jerusalem in that city in 1229.

He returned to Europe and spent many of his remaining years attempting to bring the Lombards under subjection. During intermittent struggles with the papacy he was excommunicated twice again, by Pope Gregory IX in 1239 and in 1245 by Pope Innocent IV. His participation in costly wars in Italy caused him to neglect the welfare of his German subjects. Frederick managed to establish peace, prosperity, and order in Sicily, however, promulgating there in 1231 a comprehensive code of laws, described as the best issued by any Western ruler since the reign of Charlemagne. Frederick also made worthy contributions to learning in Italy. Because he was a man of culture, he gathered scholars and men of letters at his Sicilian court, which Dante called the birthplace of Italian poetry. The University of Naples was founded by Frederick in 1224. For about a century after his death, on December 13, 1250, the belief persisted that Frederick was still alive. According to one famous legend, Frederick resides in a

cave in the Kyffhäuser Mountains, in the region of Thuringia, awaiting the summons of the German people to return and restore peace in the empire. The legend was later interpreted to refer to Frederick I.

Notes for Alexius III Angelus (Emperador Bizantino):
Alexius III ANGELUS (d. 1211, Nicaea, Nicaean Empire [now Iznik, Tur.]), Byzantine emperor from 1195 to 1203. He was the second son of Andronicus Angelus, grandson of Alexius I. In 1195 he was proclaimed emperor by the troops; he captured his brother, the emperor Isaac II, at Stagira in Macedonia and had him blinded and imprisoned. Crowned in April 1195, Alexius III was a weak
and greedy emperor, and his coup d'état had disastrous results. Byzantine prestige declined in the Balkans, where his failure to aid his son-in-law Stephen Prvovencani (Stephen the First-Crowned) caused the latter to turn to the Bulgars for help. Campaigns against the Bulgars ended in defeat (1195 and 1196),

and intrigues and diplomacy were equally unsuccessful because the new Bulgarian
ruler, Kalojan, acknowledged the pope's supremacy instead of that of Constantinople.

In 1203 the crusaders restored Isaac II and his son (crowned Alexius IV). Alexius III fled the capital with what treasure he could collect and escaped to Thrace. After an unsuccessful attempt to recover the throne, he wandered about Greece and surrendered to Boniface of Montferrat, then master of a great part of the Balkan Peninsula, but left his protection and sought shelter with Michael I, despot of Epirus. Finally, he went to Asia Minor, where his son-in-law Theodore Lascaris was holding his own against the Latins. Alexius, joined by the Sultan of Iconium (modern Konya, Tur.), demanded Theodore's crown and, when it was refused, marched against him. Taken prisoner by Theodore in 1211, Alexius was sent to a monastery at Nicaea, where he died.

Notes for Andronicus I Comnenus, Emperador Bizantino:
Andronicus I COMNENUS (b. 1118, Constantinople--d. Aug. 12, 1185, Constantinople), Byzantine emperor from 1183 to 1185, the last of the Comnenus dynasty, who attempted to reform the government but whose bitter opposition to Western Christianity precipitated a Norman invasion.

A cousin of the emperor Manuel I Comnenus (reigned 1143-80), Andronicus opposed the unpopular regency of the dowager empress Mary of Antioch after Manuel's death. In the spring of 1182 he raised an army and entered Constantinople posing as the protector of the young emperor Alexius II; one of the results of his seizure of power was a massacre of the Westerners living in the city, mostly Venetians and Genoese. Soon after, he contrived the death of the Dowager Empress. In September 1183 he was crowned coemperor to Alexius and two months later had him strangled. To legitimize his usurpation, the 65-year-old Andronicus married Alexius' 13-year-old widow.

Andronicus attempted to improve life in the provinces by reforming the decaying political system, prohibiting the sale of offices, punishing corrupt officials, and, above all, checking the power of the great feudal nobles and landowners whose privileges undermined the unity of the empire. He repudiated the pro-Western policy of Manuel I and asserted the independence of the Eastern Church, thus arousing the hostility of Western Christians. In 1183 Béla III of Hungary, claiming to be the avenger of the Dowager Empress (a Westerner), invaded the

empire and sacked several cities. Sicilian Normans led by William II in August 1185 marched through Greece, occupying Thessalonica, the second city of the empire. At the news of the approaching Normans, a revolt broke out in the capital, Isaac II Angelus was proclaimed emperor, and Andronicus was put to death by a street mob.

Notes for Carlos I de Anjou (Rey de Sicilia):
Charles I, byname CHARLES OF ANJOU, Italian CARLO D'ANGIN (b. March 1226--d. Jan. 7,1285, Foggia, Kingdom of Naples [Italy]), king of Naples and Sicily (1266-85), the first of the Angevin dynasty, and creator of a great but short-lived Mediterranean empire.

The younger brother of Louis IX of France, Charles acquired the county of Provence in 1246 and accompanied Louis on his Egyptian Crusade (1248-50). Allied with the papacy, he conquered Naples and Sicily in the 1260s, defeating Manfred and Conradin, the last representatives of the Hohenstaufen dynasty, at Benevento (1266) and Tagliacozzo (1268). He thereafter expanded his power into the Balkans and in 1277 became heir to the Kingdom of Jerusalem. Charles's transfer of his capital from Palermo to Naples and his introduction of French officials caused discontent in Sicily, where rebellion broke out in 1282 (see Sicilian Vespers). Aided by Peter III of Aragon, the Sicilians expelled the Angevins, defeating Charles's fleet in the Bay of Naples in June 1284. Charles was preparing a counteroffensive when he died.

BRITANICA

Charles I (of Two Sicilies) (1226-85), king of the Two Sicilies (1266-85). He was the posthumous son of Louis VIII, king of France, and the brother of King Louis IX. He was given the countships of Anjou and Maine by his brother, and through marriage in 1246 he became count of Provence. In 1248 he accompanied Louis on the Sixth Crusade. In 1250 he was captured and briefly imprisoned, but later returned to Provence. By 1264 he controlled much of Piedmont. Charles agreed to aid the pope in his struggle against the Ghibellines in return for the kingdom of the Two Sicilies. In 1265 Charles invaded Italy; the following year the reigning monarch Manfred was killed in battle and Charles became king. In 1268, Conradin, nephew of Manfred and last of the Hohenstaufen dynasty, led a revolt against Charles but was captured and executed. The king brutally suppressed the Ghibelline nobles, seizing their estates to pay his French soldiers. In 1270 Charles participated in the disastrous Seventh Crusade. In 1282 he learned of a revolt in Sicily against the French. Charles tried to reestablish his authority over the island, but was routed by Pedro III, king of Aragón, who destroyed his fleet. Charles died soon after, leaving his kingdom in a chaotic condition.

Notes for Alfonso VI (Rey de León y Castilla):
ALFONSO VI (1040 - 1109). Rey de León (1065-1109) y Castilla (1072-1109). Segundo hijo de Fernando I y de su esposa Sancha, Alfonso fue nombrado por su padre rey de León. A sus hermanos, Sancho y García, les correspondió, respectivamente, el reino de Castilla y el de Galicia, pero Sancho no estuvo de acuerdo con la división realizada por su padre y guerreó con su hermano Alfonso, a quien venció en Llantada en 1068, aunque éste pudo conservar el reino. Tres años después, los dos hermanos se pusieron de acuerdo para arrebatar el reino de

Galicia a su hermano y repartírselo entre ellos, pero atacado de nuevo por Sancho, Alfonso, vencido en la batalla de Golpejera (1072), fue despojado del reino leonés, pudiéndose refugiar en Toledo gracias a la intervención de su hermana Urraca. Una vez rehecha de nuevo la composición de los reinos, Alfonso ocupó La Rioja en lucha con Sancho IV de Navarra, cuya muerte trajo como consecuencia la ocupación, además, de Alava, Vizcaya y Guipúzcoa. La rendición de Toledo, que suponía la caída de todo el territorio musulmán existente hasta el Tajo, en 1085, impulsó los deseos imperialistas de Alfonso, que se autotituló «Emperador de las dos religiones» y conquistó la plaza musulmana de Valencia. Sin embargo, los reyes de taifas pidieron auxilio al emir de los almorávides, quien, con un gran ejército, llegó a la Península por el puerto de Algeciras. Derrotado por los almorávides en Sagrajas, el 23 de octubre de 1086, Alfonso, que vio peligrar la influencia conseguida sobre los territorios musulmanes, se reconcilió con el Cid, cuyas relaciones amistosas habían quedado rotas en la época de enfrentamientos castellanoleoneses, pues lo había desterrado y le encomendó la defensa de las costas levantinas. En mayo del año 1108, Alfonso y sus huestes fueron vencidos de nuevo en Uclés, perdiendo también Consuegra y Cuenca, aunque pudo seguir conservando Toledo. Pero las constantes derrotas ante los almorávides derrumbaron totalmente los anhelos imperialistas del rey castellano, quien —ante la falta de hijo varón, muerto en la batalla de Uclés, y la constante ayuda de nobles francos a la hora de defender sus reinos, casó a su hija Urraca con Raimundo de Borgoña y a su hija Teresa con Enrique de Borgoña. Los primeros serían padres de Alfonso VII el Emperador, y los segundos de Alfonso Henriques, primer rey de Portugal.

Alfonso VI, byname ALFONSO THE BRAVE, Spanish ALFONSO EL BRAVO (b. before June 1040--d. 1109, Toledo, Castile), king of Leon (1065-70) and king of reunited Castile and Leon (1072-1109), who by 1077 had proclaimed himself "emperor of all Spain" (imperator totius Hispaniae). His oppression of his Muslim vassals led to the invasion of Spain by an Almoravid army from North Africa (1086). His name is also associated with the national hero of Spain, Rodrigo Díaz
de Vivar (El Cid), who was alternatively his enemy and indifferent supporter.

Alfonso was the second son of King Ferdinand I and his wife Sancha; he was educated by Raimundo, later the bishop of Palencia, and by Pedro Ansúrez, the count of Carrión. On his death in 1065, Ferdinand left to Alfonso the kingdom of Leon together with tribute paid by the Muslim kingdom of Toledo. These possessions aroused the envious hostility of Alfonso's elder brother, Sancho II, who had inherited the kingdom of Castile and the tribute of Saragossa.

Alfonso was defeated by his brother in two battles; after the defeat at Llantada (1068) he managed to retain his kingdom, but after that at Golpejera (1072) he was captured and exiled, living for a short while at the court of his vassal Ma`mun, the Muslim king of Toledo. Soon Alfonso's sister Urraca stirred up a rebellion in Leon, and Sancho besieged her in the walled city of Zamora. During
the siege, he was killed, perhaps at Urraca's instigation. She was clearly on Alfonso's side, and some modern historians have even suggested that they had an incestuous relationship.

With Sancho's death, Alfonso recovered his own kingdom of Leon and inherited (1072) that of Castile. He also occupied Galicia, which Sancho had kept from their younger brother García; Alfonso kept García in prison until his death. A late story, in which it is alleged that Alfonso took an oath in St. Gadea's Church, Burgos, that he had had no share in Sancho's murder, probably reflects Castilian reluctance to accept him as king.

Alfonso's reign now entered on a period of success. He seized the Rioja and the Basque provinces and received the feudal homage of Sancho Ramírez for the region of Navarre to the north of the Ebro River. By 1077 he had assumed the title imperator totius Hispaniae, in which role other Christian kings accepted him. He then began the conquest of Toledo and, after a long siege, occupied it in May 1085. This was a vital conquest, which recovered for Christian Spain one of the
most important historical, strategic, and cultural centres of the peninsula, one that had been in the possession of the Muslims since the early 8th century.

During this period Alfonso regularly exacted parias, heavy financial tributes, from the Muslim ta`ifah kingdoms in return for protection against their other enemies. By thus depriving them of theirwealth, he hoped to weaken them so that they would eventually cede their independence without fighting. As a result of his exactions, Christian Spain was flooded with Muslim gold, which was spent
on warfare and donations to shrines, churches, and monasteries. The demand for tribute caused the ta`ifah kings to tax their subjects heavily, producing popular discontent and disturbances and contributing to the weakness that caused the surrender of Toledo. The Muslim ruler al-Mu'tamid of Seville took a desperate decision and called for the help of Yusuf ibn Tashufin, the Almoravid (Berber) amir of North Africa, and his Saharan tribes. The Amir disembarked in
Algeciras at the end of July 1086 and a few months later, on October 23 at Zallaqah, near Badajoz, inflicted a terrible defeat on Alfonso VI. Alfonso appealed for help to the rest of Christendom, and a small crusade was organized as a result; the

crusaders did not reach Alfonso's lands but wasted their energies and resources in an unsuccessful siege of the Muslim outpost of Tudela.

The defeat at Zallaqah seriously lessened Alfonso's influence over the ta`ifah kingdoms. It also led to a reconciliation with Rodrigo Díaz de Vivar, El Cid. Their relationship had been difficult from the start, because El Cid had taken a prominent part in the campaigns of Sancho against Alfonso; although El Cid at first attended Alfonso's court, suspicions deepened, and since 1081 he had been in the service of the Muslim king of Saragossa. Alfonso entrusted El Cid with the
occupation and defense of eastern Spain, and Rodrigo carried out this task with great success. Between 1086 and 1109 Alfonso suffered constant defeat by the Almoravids; in the last battle, that of Uclés in 1108, he lost his only son, Sancho. It was characteristic of his indomitable spirit that he at once arranged for his daughter, Urraca, to marry Alfonso I of Aragon so that the war against the
Almoravids should be continued after his death, even though it meant that Leon and Castile would be ruled by an Aragonese prince.

Though his reign was politically unsuccessful, Alfonso VI carried out an important cultural task by Europeanizing his dominions. Alfonso married Constance of Burgundy, and influences from across the Pyrenees showed themselves in the introduction of the Romanesque style in art, the adoption of the Roman instead of the Mozarabic liturgy, the replacement of Visigothic by Carolingian script, and
the energetic support that Alfonso gave to Cluniac monasticism, as well as in his reconstruction and safeguarding of the pilgrim road to Santiago.

CID CAMPEADOR Rodrigo Díaz de Vivar
Nació en Vivar, Burgos, 1050 y murió en Consuegra, 1099. Héroe de la Reconquista española. Fue armado caballero por el rey Fernando I, luego estuvo al servicio de los hijos de aquél, Sancho II y Alfonso VI. Este último le acusó de su implicación en el asesinato de su hermano, y por esta causa fue desterrado. En 1081 participó en numerosas batallas contra los árabes, y en 1094 tomó la ciudad de Valencia. Fue derrotado y muerto en una batalla en Consuegra. Este personaje histórico fue la más viva representación del héroe castellano de su época, y su vida se cuenta en una de las obras más importantes de la literatura medieval, el Cantar de Mio Cid.

Rodrigo Díaz de Vivar "El Cid Campeador" (circa 1040-99), Spanish warrior, whom later legend made into a national hero and the embodiment of chivalry and virtue.
The son of a minor Castilian nobleman, although related to the great landowning nobility on his mother's side, El Cid was born at Vivar near Burgos. He grew up in the household of the future king, Sancho II (circa 1038-72) of Castile, and in the military campaigns against Aragón for control of Saragossa he distinguished himself as the king's premier knight. After Sancho was assassinated in 1072, Rodrigo entered the service of the new king, ALFONSO VI. In 1081, however, he ran afoul of Alfonso and was exiled from the kingdom. With his retinue, he then set off for eastern Spain in search of honor, glory, and booty. He subsequently served the Moorish king of Zaragoza and other Muslim rulers. His military career culminated in his capture of Valencia (1094), which he held and ruled in defiance of Almoravid attacks until his death on July 10, 1099.
El Cid's exploits are recorded in the 12th-century Latin chronicle Historia Roderici and in the most famous Spanish epic, El cantar de mío Cid (The Song of the Cid). Composed about 1200, the epic describes in a realistic, convincing manner the golden age of medieval chivalry, as well as El Cid's heroic deeds. Illuminating the militaristic frontier culture of medieval Spain, it contrasts worthless nobles of high social rank with such men as El Cid, who are of humbler status but fight for honor and glory and are prudent, brave, generous, and loyal to family, king, and religion and thus superior in virtue. El Cid is also celebrated in some of Spain's finest ballads and in the works of such dramatists as the Spaniard Lope de Vega and the Frenchman Pierre Corneille.

Notes for Alfonso VI (Rey de León y Castilla):
ALFONSO VI (1040 - 1109). Rey de León (1065-1109) y Castilla (1072-1109). Segundo hijo de Fernando I y de su esposa Sancha, Alfonso fue nombrado por su padre rey de León. A sus hermanos, Sancho y Garcka, les correspondió, respectivamente, el reino de Castilla y el de Galicia, pero Sancho no estuvo de acuerdo con la división realizada por su padre y guerreó con su hermano Alfonso, a quien venció en Llantada en 1068, aunque éste pudo conservar el reino. Tres anos después, los dos hermanos se pusieron de acuerdo para arrebatar el reino de Galicia a su hermano y repartkrselo entre ellos, pero atacado de nuevo por Sancho, Alfonso, vencido en la batalla de Golpejera (1072), fue despojado del reino leonés, pudiéndose refugiar en Toledo gracias a la intervención de su hermana Urraca. Una vez rehecha de nuevo la composición de los reinos, Alfonso ocupó La Rioja en lucha con Sancho IV de Navarra, cuya muerte trajo como consecuencia la ocupación, ademis, de Alava, Vizcaya y Guipszcoa. La rendición de Toledo, que suponka la cakda de todo el territorio musulmin existente hasta el Tajo, en 1085, impulsó los deseos imperialistas de Alfonso, que se autotituló «Emperador de las dos religiones» y conquistó la plaza musulmana de Valencia. Sin embargo, los reyes de taifas pidieron auxilio al emir de los almorivides, quien, con un gran ejército, llegó a la Penknsula por el puerto de Algeciras. Derrotado por los almorivides en Sagrajas, el 23 de octubre de 1086, Alfonso, que vio peligrar la influencia conseguida sobre los territorios musulmanes, se reconcilió con el Cid, cuyas relaciones amistosas habkan quedado rotas en la época de enfrentamientos castellanoleoneses, pues lo habka desterrado y le encomendó la defensa de las costas levantinas. En mayo del ano 1108, Alfonso y sus huestes fueron vencidos de nuevo en Uclés, perdiendo también Consuegra y Cuenca, aunque pudo seguir conservando Toledo. Pero las constantes derrotas ante los almorivides derrumbaron totalmente los anhelos imperialistas del rey castellano, quien —ante la falta de hijo varón, muerto en la batalla de Uclés, y la constante ayuda de nobles francos a la hora de defender sus reinos, casó a su hija Urraca con Raimundo de Borgona y a su hija Teresa con Enrique de Borgona. Los primeros serkan padres de Alfonso VII el Emperador, y los segundos de Alfonso Henriques, primer rey de Portugal.

Alfonso VI, byname ALFONSO THE BRAVE, Spanish ALFONSO EL BRAVO (b. before June 1040--d. 1109, Toledo, Castile), king of Leon (1065-70) and king of reunited Castile and Leon (1072-1109), who by 1077 had proclaimed himself "emperor of all Spain" (imperator totius Hispaniae). His oppression of his Muslim vassals led to the invasion of Spain by an Almoravid army from

North Africa (1086). His name is also associated with the national hero of Spain, Rodrigo Dkaz
de Vivar (El Cid), who was alternatively his enemy and indifferent supporter.

Alfonso was the second son of King Ferdinand I and his wife Sancha; he was educated by Raimundo, later the bishop of Palencia, and by Pedro Anssrez, the count of Carrión. On his death in 1065, Ferdinand left to Alfonso the kingdom of Leon together with tribute paid by the Muslim kingdom of Toledo. These possessions aroused the envious hostility of Alfonso's elder brother, Sancho II, who had inherited the kingdom of Castile and the tribute of Saragossa. Alfonso was defeated by his brother in two battles; after the defeat at Llantada (1068) he managed to retain his kingdom, but after that at Golpejera (1072) he was captured and exiled, living for a short while at the court of his vassal Ma`mun, the Muslim king of Toledo. Soon Alfonso's sister Urraca stirred up a rebellion in Leon, and Sancho besieged her in the walled city of Zamora. During the siege, he was killed, perhaps at Urraca's instigation. She was clearly on Alfonso's side, and some modern historians have even suggested that they had an incestuous relationship.

With Sancho's death, Alfonso recovered his own kingdom of Leon and inherited (1072) that of Castile. He also occupied Galicia, which Sancho had kept from their younger brother Garcka; Alfonso kept Garcka in prison until his death. A late story, in which it is alleged that Alfonso took an oath in St. Gadea's Church, Burgos, that he had had no share in Sancho's murder, probably reflects Castilian reluctance to accept him as king.

Alfonso's reign now entered on a period of success. He seized the Rioja and the Basque provinces and received the feudal homage of Sancho Ramkrez for the region of Navarre to the north of the Ebro River. By 1077 he had assumed the title imperator totius Hispaniae, in which role other Christian kings accepted him. He then began the conquest of Toledo and, after a long siege, occupied it in May 1085. This was a vital conquest, which recovered for Christian Spain one of the
most important historical, strategic, and cultural centres of the peninsula, one that had been in the possession of the Muslims since the early 8th century.

During this period Alfonso regularly exacted parias, heavy financial tributes, from the Muslim ta`ifah kingdoms in return for protection against their other enemies. By thus depriving them of theirwealth, he hoped to weaken them so that they would eventually cede their independence without fighting. As a result of his exactions, Christian Spain was flooded with Muslim gold, which was spent on warfare and donations to shrines, churches, and monasteries. The demand for tribute caused the ta`ifah kings to tax their subjects heavily, producing popular discontent and disturbances and contributing to the weakness that caused the surrender of Toledo. The Muslim ruler al-Mu'tamid of Seville took a desperate decision and called for the help of Yusuf ibn Tashufin, the Almoravid (Berber) amir of North Africa, and his Saharan tribes. The Amir disembarked in Algeciras at the end of July 1086 and a few months later, on October 23 at Zallaqah, near Badajoz, inflicted a terrible defeat on Alfonso VI. Alfonso appealed for help to the rest of Christendom, and a small crusade was

organized as a result; the crusaders did not reach Alfonso's lands but wasted their energies and resources in an unsuccessful siege of the Muslim outpost of Tudela.

The defeat at Zallaqah seriously lessened Alfonso's influence over the ta`ifah kingdoms. It also led to a reconciliation with Rodrigo Dkaz de Vivar, El Cid. Their relationship had been difficult from the start, because El Cid had taken a prominent part in the campaigns of Sancho against Alfonso; although El Cid at first attended Alfonso's court, suspicions deepened, and since 1081 he had been in the service of the Muslim king of Saragossa. Alfonso entrusted El Cid with the
occupation and defense of eastern Spain, and Rodrigo carried out this task with great success. Between 1086 and 1109 Alfonso suffered constant defeat by the Almoravids; in the last battle, that of Uclés in 1108, he lost his only son, Sancho. It was characteristic of his indomitable spirit that he at once arranged for his daughter, Urraca, to marry Alfonso I of Aragon so that the war against the
Almoravids should be continued after his death, even though it meant that Leon and Castile would be ruled by an Aragonese prince.

Though his reign was politically unsuccessful, Alfonso VI carried out an important cultural task by Europeanizing his dominions. Alfonso married Constance of Burgundy, and influences from across the Pyrenees showed themselves in the introduction of the Romanesque style in art, the adoption of the Roman instead of the Mozarabic liturgy, the replacement of Visigothic by Carolingian script, and
the energetic support that Alfonso gave to Cluniac monasticism, as well as in his reconstruction and safeguarding of the pilgrim road to Santiago.

CID CAMPEADOR  Rodrigo Dkaz de Vivar
Nació en Vivar, Burgos, 1050 y murió en Consuegra, 1099. Héroe de la Reconquista espanola. Fue armado caballero por el rey Fernando I, luego estuvo al servicio de los hijos de aquél, Sancho II y Alfonso VI. Este sltimo le acusó de su implicación en el asesinato de su hermano, y por esta causa fue desterrado. En 1081 participó en numerosas batallas contra los irabes, y en 1094 tomó la ciudad de Valencia. Fue derrotado y muerto en una batalla en Consuegra. Este personaje histórico fue la mis viva representación del héroe castellano de su época, y su vida se cuenta en una de las obras mis importantes de la literatura medieval, el Cantar de Mio Cid.

Rodrigo Dkaz de Vivar "El Cid Campeador" (circa 1040-99), Spanish warrior, whom later legend made into a national hero and the embodiment of chivalry and virtue.
The son of a minor Castilian nobleman, although related to the great landowning nobility on his mother's side, El Cid was born at Vivar near Burgos. He grew up in the household of the future king, Sancho II (circa 1038-72) of Castile, and in the military campaigns against Aragón for control of Saragossa

he distinguished himself as the king's premier knight. After Sancho was assassinated in 1072, Rodrigo entered the service of the new king, ALFONSO VI. In 1081, however, he ran afoul of Alfonso and was exiled from the kingdom. With his retinue, he then set off for eastern Spain in search of honor, glory, and booty. He subsequently served the Moorish king of Zaragoza and other Muslim rulers. His military career culminated in his capture of Valencia (1094), which he held and ruled in defiance of Almoravid attacks until his death on July 10, 1099. El Cid's exploits are recorded in the 12th-century Latin chronicle Historia Roderici and in the most famous Spanish epic, El cantar de mko Cid (The Song of the Cid). Composed about 1200, the epic describes in a realistic, convincing manner the golden age of medieval chivalry, as well as El Cid's heroic deeds. Illuminating the militaristic frontier culture of medieval Spain, it contrasts worthless nobles of high social rank with such men as El Cid, who are of humbler status but fight for honor and glory and are prudent, brave, generous, and loyal to family, king, and religion and thus superior in virtue. El Cid is also celebrated in some of Spain's finest ballads and in the works of such dramatists as the Spaniard Lope de Vega and the Frenchman Pierre Corneille.

Following up on the policies of their father, Ramon Berenguer I, they proceeded to build the defenses and repopulate the lands that he had conquered. In 1082, in a forest en route to Gerona, Ramon Berenguer II was murdered, probably by his brother, thereafter nicknamed "the Fratricide" ("el Fratricida"). Berenguer Ramon II, now sole master, took part in the civil wars of the Spanish Muslims and reconquered the Tarragona area (1091). He reigned until 1097, when, having lost a trial by combat that was intended to decide the question of his guilt in the crime
attributed to him, he went on crusade to Jerusalem, where he died, probably in either 1097 or 1099.

Notes for Rodrigo Dkaz de Vivar (EL CID CAMPEADOR):
Cid, the, Spanish EL CID, also called EL CAMPEADOR ("the Champion"), byname of RODRIGO, or RUY, DKAZ DE VIVAR (b. c. 1043, Vivar, near Burgos, Castile [Spain]--d. July 10, 1099, Valencia), Castilian military leader and national hero. His popular name, El Cid (from Spanish Arabic as-sid, "lord"), dates from his lifetime.

Early life

Rodrigo Dkaz' father, Diego Laknez, was a member of the minor nobility (infanzones) of Castile. But the Cid's social background was less unprivileged than later popular tradition liked to suppose, for he was directly connected on his mother's side with the great landed aristocracy, and he was brought up at

the court of Ferdinand I in the household of that king's eldest son, the future Sancho II of Castile. When Sancho succeeded to the Castilian throne (1065), he nominated the 22-year-old Cid as his standard-bearer (armiger regis), or commander of the royal troops. This early promotion to important office suggests that the young Cid had already won a reputation for military prowess. In
1067 he accompanied Sancho on a campaign against the important Moorish kingdom of Saragossa (Zaragoza) and played a leading role in the negotiations that made its king, al-Muqtadir, a tributary of the Castilian crown.

Ferdinand I, on his death, had partitioned his kingdoms among his various children, leaving Leon to his second son, Alfonso VI. Sancho began (1067) to make war on the latter with the aim of annexing Leon. Later legend was to make the Cid a reluctant supporter of Sancho's aggression, but it is unlikely the real Cid had any such scruples. He played a prominent part in Sancho's successful
campaigns against Alfonso and so found himself in an awkward situation in 1072, when the childless Sancho was killed while besieging Zamora, leaving the dethroned Alfonso as his only possible heir. The new king appears to have done his best to win the allegiance of Sancho's most powerful supporter. Though the Cid now lost his post as armiger regis to a great magnate, Count Garcka
Ordónez (whose bitter enemy he became), and his former influence at court naturally declined, he was allowed to remain there; and, in July 1074, probably at Alfonso's instigation, he married the king's niece Jimena, daughter of the Count de Oviedo. He thus became allied by marriage to the ancient royal dynasty of Leon. Very little is known about Jimena. The couple had one son and two
daughters. The son, Diego Rodrkguez, was killed in battle against the Muslim Almoravid invaders from North Africa, at Consuegra (1097).

The Cid's position at court was, despite his marriage, precarious. He seems to have been thought of as the natural leader of those Castilians who were unreconciled to being ruled by a king of Leon. He certainly resented the influence exercised by the great landed nobles over Alfonso VI. Though his heroic biographers would later present the Cid as the blameless victim of unscrupulous noble enemies and of Alfonso's willingness to listen to unfounded slanders, it seems likely that the Cid's penchant for publicly humiliating powerful men may have largely contributed to his downfall. Though he was later to show himself astute and calculating as both a soldier and a politician, his conduct vis-a-vis the court suggests that resentment at his loss of influence as a result of Sancho's death may temporarily have undermined his capacity for self-control. In 1079, while on a mission to the Moorish king of Seville, he became embroiled with Garcka Ordónez, who was aiding the king of Granada in an invasion of the kingdom of Seville. The Cid defeated the markedly superior Granadine army at Cabra, near Seville, capturing Garcka Ordónez. This victory prepared the way for his downfall; and when, in 1081, he led an unauthorized military raid into the Moorish kingdom of Toledo, which was under Alfonso's protection, the king exiled the Cid from his kingdoms. Several subsequent attempts at reconciliation

produced no lasting results, and after 1081 the Cid never again was able to live for long in Alfonso VI's dominions.

## Service to the Muslims

The exile offered his services to the Muslim dynasty that ruled Saragossa and with which he had first made contact in 1065. The king of Saragossa, in northeastern Spain, al-Mu'tamin, welcomed the chance of having his vulnerable kingdom defended by so prestigious a Christian warrior. The Cid now loyally served al-Mu'tamin and his successor, al-Musta'in II, for nearly a decade. As a result of his experience he gained that understanding of the complexities of Hispano-Arabic politics and of Islamic law and custom that would later help him to conquer and hold Valencia. Meanwhile, he steadily added to his reputation as a general who had never been defeated in battle. In 1082, on behalf of al-Mu'tamin, he inflicted a decisive defeat on the Moorish king of Lérida and the latter's Christian allies, among them the count of Barcelona. In 1084 he defeated a large Christian army under King Sancho Ramkrez of Aragon. He was richly rewarded for these victories by his grateful Muslim masters.

In 1086 there began the great Almoravid invasion of Spain from North Africa. Alfonso VI, crushingly defeated by the invaders at Sagrajas (Oct. 23, 1086) suppressed his antagonism to the Cid and recalled from exile the Christians' best general. The Cid's presence at Alfonso's court in July 1087 is documented. But shortly afterward, he was back in Saragossa, and he was not a participant in the subsequent desperate battles against the Almoravids in the strategic regions where their attacks threatened the whole existence of Christian Spain. The Cid, for his part, now embarked on the lengthy and immensely complicated political maneuvering that was aimed at making him master of the rich Moorish kingdom of Valencia.

## Conquest of Valencia

His first step was to eliminate the influence of the counts of Barcelona in that area. This was done when Berenguer Ramón II was humiliatingly defeated at Tébar, near Teruel (May 1090). During the next years the Cid gradually tightened his control over Valencia and its ruler, al-Qadir, now his tributary. His moment of destiny came in October 1092 when the qadi (chief magistrate), Ibn Jahhaf, with Almoravid political support rebelled and killed al-Qadir. The Cid responded by
closely besieging the rebel city. The siege lasted for many months; an Almoravid attempt to break it failed miserably (December 1093). In May 1094 Ibn Jahhaf at last surrendered, and the Cid finally entered Valencia as its conqueror. To facilitate his takeover he characteristically first made a pact with Ibn Jahhaf that led the latter to believe that his acts of rebellion and regicide were forgiven; but
when the pact had served its purpose, the Cid arrested the former qadi and ordered him to be burnt alive. The Cid now ruled Valencia directly, himself acting as chief magistrate of the Muslims as well as the Christians. Nominally he held Valencia for Alfonso VI, but in fact he was its independent ruler in all but name. The city's chief mosque was Christianized in 1096; a French bishop,

Jerome, was appointed to the new see; and there was a considerable influx of Christian colonists. The Cid's princely status was emphasized when his daughter Cristina (Elvira) married a prince of Aragon, Ramiro, lord of Monzón, and his other daughter, Marka (Sol), married Ramón Berenguer III, count of Barcelona.

Aftermath

The great enterprise to which the Cid had devoted so much of his energies was to prove totally ephemeral. Soon after his death Valencia was besieged by the Almoravids, and Alfonso VI had to intervene in person to save it. But the king rightly judged the place indefensible unless he diverted there permanently large numbers of troops urgently needed to defend the Christian heartlands against the invaders. He evacuated the city and then ordered it to be burned. On May 5, 1102, the Almoravids occupied Valencia, which was to remain in Muslim hands until 1238. The Cid's body was taken to Castile and reburied in the monastery of San Pedro de Cardena, near Burgos, where it became the centre of a lively tomb cult.

The Cid's biography presents special problems for the historian because he was speedily elevated to the status of national hero of Castile, and a complex heroic biography of him, in which legend played a dominant role, came into existence; the legend was magnified by the influence of the 12th-century epic poem of Castile, El cantar de mko Cid ("The Song of the Cid") and later by Pierre Corneille's tragedy Le Cid, first performed in 1637. For authentic information historians have to rely mainly on a few contemporary documents, on the Historia Roderici (a reliable, private 12th-century Latin chronicle of the Cid's life), and on a detailed eyewitness account of his conquest of Valencia by the Arab historian Ibn 'Alqamah.

LA ESPADA DEL CID (Extracto)

Hasta hace un par de décadas se afirmaba que El Cid pertenecka a la baja nobleza castellana. Incluso llegó a senalarse una imigen plabeya: la del hombre que parte de la pobreza y alcanza con su esfuerzo la riqueza. Hoy parede altamente probable que se familia ostentara una condición social mucho mas elevada de lo que se pensaba: Rodrigo Dkaz era por nacimiento un infanzón - descendiente de la nobleza visigoda- en una época en donde las diferencias entre la alta y la baja nobleza eran bastante difusas. Esta circunstancia, a

simple vista irrelevante, no solo ha permitido explicar su directa y estrecha vinculación al poder regio desde nino. En la actualidad, por diversas investigaciones realizadas en torno al entramado polktico y social en la Castilla medieval, tal circunstancia explicarka también las causas de la difkcil relación que El Cid mantuvo con el rey Alfonso VI y sus hombres. (*) Los tratos entre infanzones y el poder psblico, sobre todo en los primeros siglos del milenio, nunca estuvieron exentos de tensiones. Y la relación de vasallaje no era por tanto de sometimiento, sino de intercambio: obligaciones militares a cambio de beneficios.

Esa misma condición ha propiciado la imigen de un Cid mercenario, dispuesto a servir a quien mejor lo recompensara. Si por mercenario entendemos al individuo que ofrece sus servicios profesionales a cambio de una retibución material, efectivamente lo fue. Pero en su época cobrar por los servicios militares era lo normal: el infanzón marchaba al combate a cambio de beneficios económicos. El Cid, indiscutiblemente, prestó sus servicios al rey Alfonso VI y también a los musulmanes, rivales del monarca cristiano. Pero las prestaciones a reyes musulmanes -nos recuerda la historia- tuvieron lugar tras el destierro del Cid, cuando se rompió su relación con el rey, y en todo caso nunca luchó contra él.

Estos hechos promovieron la imigen de un Cid promusulmin. En la actualidad, tal percepción ha cambiado. Hubo un Cid estratega que pactó con musulmanes, como también lo hicieron diversos reyes, inclukdo el propio Alfonso VI. Basta recordar que, en la primera campana importante en la que participó el propio Dkaz de Vivar, lo hizo al lado de Sancho -hijo del rey de Castilla- quien derrotó y dió muerte a su propio tko el rey Ramiro I de Aragón, para mantener la integridad territorial de al-Muqtadir, aliado musulmin de su padre.

Ask como El Cid triunfaba en el campo de batalla, era derrotado en las cortes reales. Nunca logró contrarrestar las intrigas palaciegas de sus enemigos, ni mostró la menor prudencia en el trato que dispensaba a los hombres cercanos al monarca. Era un mal polktico, pero un extraordinario guerrero. El Cid aplastaba a quién lo enfrentaba: fuesen reyes cristianos o fuesen reyes de taifas. Al final de su vida se tornó en el prkncipe de Valencia y sus alrededores. Habka hecho las paces con Alfonso, mantenka relaciones amistosas con los reyes cristianos y no tenka alianzas con musulmin alguno.

Mis temido que respetado, fue inclemente cuando las circunstancias se lo imponkan. Su espada era su poder. A su muerte dejó un reino fugaz, es cierto, pero la historiografka actual le ha hallado finalmente un lugar indisputable en la historia de Espana: sus hazanas demostraron que el poder musulmin no era invencible. De ahk que su figura trascendiera en el tiempo, de boca en boca, como verdad o como leyenda, en crónicas históricas como en poémas épicos. Es que se necesitó la bravura del Cid por casi cuatro siglos mis para hacer a Espana.

El matrimonio (que pudo haber tenido lugar entre los años 1094 y 1099) ha de ser interpretado como un paso dado por Rodrigo para reforzar su alianza con Aragón. Ramiro y Cristina tuvieron un hijo, García, que se convirtió en rey de Navarra cuando esa región recuperó su independencia política en el año 1134.

La otra hija, María, contrajo matrimonio con Ramón Berenguer III de Barcelona Se ha sugerido, aunque de modo poco convincente, que había casado en primeras nupcias con el infante Pedro, hijo de Pedro I de Aragón, que falleció tras una larga enfermedad en 1102 o 1103.) Este matrimonio pretendía apaciguar la hostilidad catalana, manifestada hacía poco tiempo en Oropesa en el año 1098.

Notes for Alfonso VI (Rey de León y Castilla):
ALFONSO VI (1040 - 1109). Rey de León (1065-1109) y Castilla (1072-1109). Segundo hijo de Fernando I y de su esposa Sancha, Alfonso fue nombrado por su padre rey de León. A sus hermanos, Sancho y Garcka, les correspondió,

respectivamente, el reino de Castilla y el de Galicia, pero Sancho no estuvo de acuerdo con la división realizada por su padre y guerreó con su hermano Alfonso, a quien venció en Llantada en 1068, aunque éste pudo conservar el reino. Tres anos después, los dos hermanos se pusieron de acuerdo para arrebatar el reino de Galicia a su hermano y repartkrselo entre ellos, pero atacado de nuevo por Sancho, Alfonso, vencido en la batalla de Golpejera (1072), fue despojado del reino leonés, pudiéndose refugiar en Toledo gracias a la intervención de su hermana Urraca. Una vez rehecha de nuevo la composición de los reinos, Alfonso ocupó La Rioja en lucha con Sancho IV de Navarra, cuya muerte trajo como consecuencia la ocupación, ademis, de Alava, Vizcaya y Guipszcoa. La rendición de Toledo, que suponka la cakda de todo el territorio musulmin existente hasta el Tajo, en 1085, impulsó los deseos imperialistas de Alfonso, que se autotituló «Emperador de las dos religiones» y conquistó la plaza musulmana de Valencia. Sin embargo, los reyes de taifas pidieron auxilio al emir de los almorivides, quien, con un gran ejército, llegó a la Penknsula por el puerto de Algeciras. Derrotado por los almorivides en Sagrajas, el 23 de octubre de 1086, Alfonso, que vio peligrar la influencia conseguida sobre los territorios musulmanes, se reconcilió con el Cid, cuyas relaciones amistosas habkan quedado rotas en la época de enfrentamientos castellanoleoneses, pues lo habka desterrado y le encomendó la defensa de las costas levantinas. En mayo del ano 1108, Alfonso y sus huestes fueron vencidos de nuevo en Uclés, perdiendo también Consuegra y Cuenca, aunque pudo seguir conservando Toledo. Pero las constantes derrotas ante los almorivides derrumbaron totalmente los anhelos imperialistas del rey castellano, quien —ante la falta de hijo varón, muerto en la batalla de Uclés, y la constante ayuda de nobles francos a la hora de defender sus reinos, casó a su hija Urraca con Raimundo de Borgona y a su hija Teresa con Enrique de Borgona. Los primeros serkan padres de Alfonso VII el Emperador, y los segundos de Alfonso Henriques, primer rey de Portugal.

Alfonso VI, byname ALFONSO THE BRAVE, Spanish ALFONSO EL BRAVO (b. before June 1040--d. 1109, Toledo, Castile), king of Leon (1065-70) and king of reunited Castile and Leon (1072-1109), who by 1077 had proclaimed himself "emperor of all Spain" (imperator totius Hispaniae). His oppression of his Muslim vassals led to the invasion of Spain by an Almoravid army from North Africa (1086). His name is also associated with the national hero of Spain, Rodrigo Dkaz
de Vivar (El Cid), who was alternatively his enemy and indifferent supporter.

Alfonso was the second son of King Ferdinand I and his wife Sancha; he was educated by Raimundo, later the bishop of Palencia, and by Pedro Anssrez, the count of Carrión. On his death in 1065, Ferdinand left to Alfonso the kingdom of Leon together with tribute paid by the Muslim kingdom of Toledo. These possessions aroused the envious hostility of Alfonso's elder brother, Sancho II, who had inherited the kingdom of Castile and the tribute of Saragossa. Alfonso was defeated by his brother in two battles; after the defeat at Llantada (1068) he managed to retain his kingdom, but after that at Golpejera (1072) he was captured and exiled, living for a short while at the court of his vassal Ma`mun, the Muslim king of Toledo. Soon Alfonso's sister Urraca stirred up a rebellion in Leon, and Sancho besieged her in the walled city of Zamora. During

the siege, he was killed, perhaps at Urraca's instigation. She was clearly on Alfonso's side, and some modern historians have even suggested that they had an incestuous relationship.

With Sancho's death, Alfonso recovered his own kingdom of Leon and inherited (1072) that of Castile. He also occupied Galicia, which Sancho had kept from their younger brother Garcka; Alfonso kept Garcka in prison until his death. A late story, in which it is alleged that Alfonso took an oath in St. Gadea's Church, Burgos, that he had had no share in Sancho's murder, probably reflects Castilian reluctance to accept him as king.

Alfonso's reign now entered on a period of success. He seized the Rioja and the Basque provinces and received the feudal homage of Sancho Ramkrez for the region of Navarre to the north of the Ebro River. By 1077 he had assumed the title imperator totius Hispaniae, in which role other Christian kings accepted him. He then began the conquest of Toledo and, after a long siege, occupied it in May 1085. This was a vital conquest, which recovered for Christian Spain one of the
most important historical, strategic, and cultural centres of the peninsula, one that had been in the possession of the Muslims since the early 8th century.

During this period Alfonso regularly exacted parias, heavy financial tributes, from the Muslim ta`ifah kingdoms in return for protection against their other enemies. By thus depriving them of theirwealth, he hoped to weaken them so that they would eventually cede their independence without fighting. As a result of his exactions, Christian Spain was flooded with Muslim gold, which was spent on warfare and donations to shrines, churches, and monasteries. The demand for tribute caused the ta`ifah kings to tax their subjects heavily, producing popular discontent and disturbances and contributing to the weakness that caused the surrender of Toledo. The Muslim ruler al-Mu'tamid of Seville took a desperate decision and called for the help of Yusuf ibn Tashufin, the Almoravid (Berber) amir of North Africa, and his Saharan tribes. The Amir disembarked in Algeciras at the end of July 1086 and a few months later, on October 23 at Zallaqah, near Badajoz, inflicted a terrible defeat on Alfonso VI. Alfonso appealed for help to the rest of Christendom, and a small crusade was organized as a result; the crusaders did not reach Alfonso's lands but wasted their energies and resources in an unsuccessful siege of the Muslim outpost of Tudela.

The defeat at Zallaqah seriously lessened Alfonso's influence over the ta`ifah kingdoms. It also led to a reconciliation with Rodrigo Dkaz de Vivar, El Cid. Their relationship had been difficult from the start, because El Cid had taken a prominent part in the campaigns of Sancho against Alfonso; although El Cid at first attended Alfonso's court, suspicions deepened, and since 1081 he had been in the service of the Muslim king of Saragossa. Alfonso entrusted El Cid with the
occupation and defense of eastern Spain, and Rodrigo carried out this task with great success. Between 1086 and 1109 Alfonso suffered constant defeat by the Almoravids; in the last battle, that of Uclés in 1108, he lost his only son, Sancho. It was characteristic of his indomitable spirit that he at once arranged

for his daughter, Urraca, to marry Alfonso I of Aragon so that the war against the
Almoravids should be continued after his death, even though it meant that Leon and Castile would be ruled by an Aragonese prince.

Though his reign was politically unsuccessful, Alfonso VI carried out an important cultural task by Europeanizing his dominions. Alfonso married Constance of Burgundy, and influences from across the Pyrenees showed themselves in the introduction of the Romanesque style in art, the adoption of the Roman instead of the Mozarabic liturgy, the replacement of Visigothic by Carolingian script, and
the energetic support that Alfonso gave to Cluniac monasticism, as well as in his reconstruction and safeguarding of the pilgrim road to Santiago.

CID CAMPEADOR  Rodrigo Dkaz de Vivar
Nació en Vivar, Burgos, 1050 y murió en Consuegra, 1099. Héroe de la Reconquista espanola. Fue armado caballero por el rey Fernando I, luego estuvo al servicio de los hijos de aquél, Sancho II y Alfonso VI. Este sltimo le acusó de su implicación en el asesinato de su hermano, y por esta causa fue desterrado. En 1081 participó en numerosas batallas contra los irabes, y en 1094 tomó la ciudad de Valencia. Fue derrotado y muerto en una batalla en Consuegra. Este personaje histórico fue la mis viva representación del héroe castellano de su época, y su vida se cuenta en una de las obras mis importantes de la literatura medieval, el Cantar de Mio Cid.

Rodrigo Dkaz de Vivar "El Cid Campeador" (circa 1040-99), Spanish warrior, whom later legend made into a national hero and the embodiment of chivalry and virtue.
The son of a minor Castilian nobleman, although related to the great landowning nobility on his mother's side, El Cid was born at Vivar near Burgos. He grew up in the household of the future king, Sancho II (circa 1038-72) of Castile, and in the military campaigns against Aragón for control of Saragossa he distinguished himself as the king's premier knight. After Sancho was assassinated in 1072, Rodrigo entered the service of the new king, ALFONSO VI. In 1081, however, he ran afoul of Alfonso and was exiled from the kingdom. With his retinue, he then set off for eastern Spain in search of honor, glory, and booty. He subsequently served the Moorish king of Zaragoza and other Muslim rulers. His military career culminated in his capture of Valencia (1094), which he held and ruled in defiance of Almoravid attacks until his death on July 10, 1099.
El Cid's exploits are recorded in the 12th-century Latin chronicle Historia Roderici and in the most famous Spanish epic, El cantar de mko Cid (The Song of the Cid). Composed about 1200, the epic describes in a realistic, convincing manner the golden age of medieval chivalry, as well as El Cid's heroic deeds. Illuminating the militaristic frontier culture of medieval Spain, it contrasts worthless nobles of high social rank with such men as El Cid, who are of humbler status but fight for honor and glory and are prudent, brave, generous, and loyal to family, king, and religion and thus superior in virtue. El Cid is also

celebrated in some of Spain's finest ballads and in the works of such dramatists as the Spaniard Lope de Vega and the Frenchman Pierre Corneille.

Notes for Luis VI El Gordo (Rey de Francia):

Louis VI, called The Fat (1081-1137), king of France (1108-37), son and successor of Philip I; he was married to Adelaide of Savoy. Almost his entire reign was spent in subduing the robber barons, who preyed on the environs of Paris but were finally forced to yield to royal authority. For some 20 years during the period from 1109-1135, Louis waged war against Henry I, the Norman king of England, and against Henry's son-in-law, Holy Roman Emperor Henry V; he successfully repelled an invasion by Henry V in 1124. Louis greatly strengthed the royal power in France, granted benefactions to the church and privileges to towns, and became known as the protector of the peasants and as a fearless military leader. He was succeeded on the throne by his son Louis VII.

Notes for I Henry, King Of England(1100-1135):
Henry I, byname HENRY BEAUCLERC (Good Scholar), French HENRI BEAUCLERC (b. 1069, Selby, Yorkshire, Eng.--d. Dec. 1, 1135, Lyons-la-Forzt, Normandy), youngest and ablest of William I the Conqueror's sons, who as king of England (1100-35) strengthened the crown's executive powers and, like his father, also ruled Normandy (from 1106).

Reign.

Henry was crowned at Westminster, on Aug. 5, 1100, three days after his brother, King William II, William the Conqueror's second son, had been killed in a hunting accident. Duke Robert Curthose, the eldest of the three brothers, who by feudal custom had succeeded to his father's inheritance, Normandy, was returning from the First Crusade and could not assert his own claim to the English throne until the following year. The succession was precarious, however, because a number of wealthy Anglo-Norman barons supported Duke Robert, and Henry moved quickly to gain all the backing he could. He issued an ingenious Charter of Liberties, which purported to end capricious taxes, confiscations of church revenues, and other abuses of his predecessor. By his marriage with Matilda, a Scottish princess of the old Anglo-Saxon royal line, he established the foundations for peaceable relations with the Scots and support from the English. And he recalled St. Anselm, the scholarly archbishop of Canterbury whom his brother, William II, had banished.

When Robert Curthose finally invaded England in 1101, several of the greatest barons defected to him. But Henry, supported by a number of his barons, most of the Anglo-Saxons, and St. Anselm, worked out an amicable settlement with the invaders. Robert relinquished his claim to England, receiving in return Henry's own territories in Normandy and a large annuity.

Although a crusading hero, Robert was a self-indulgent, vacillating ruler who allowed Normandy to slip into chaos. Norman churchmen who fled to England urged Henry to conquer and pacify the duchy and thus provided moral grounds for Henry's ambition to reunify his father's realm at his brother's expense. Paving his way with bribes to Norman barons and agreements with neighbouring princes, in 1106 Henry routed Robert's army at Tinchebrai in southwestern Normandy and captured Robert, holding him prisoner for life.

Between 1104 and 1106 Henry had been in the uncomfortable position of posing, in Normandy, as a champion of the church while fighting with his own archbishop of Canterbury. St. Anselm had returned from exile in 1100 dedicated to reforms of Pope Paschal II, which were designed to make the church independent of secular sovereigns. Following papal bans against lay lords investing churchmen with their lands and against churchmen rendering homage to laymen, Anselm refused to consecrate bishops whom Henry had invested and declined to do homage to Henry himself. Henry regarded bishoprics and abbeys not only as spiritual offices but as great sources of wealth. Since in many cases they owed the crown military services, he was anxious to maintain the feudal bond between the bishops and the crown.

Ultimately, the issues of ecclesiastical homage and lay investiture forced Anselm into a second exile. After numerous letters and threats between king, pope, and archbishop, a compromise was concluded shortly before the Battle of

Tinchebrai and was ratified in London in 1107. Henry relinquished his right to invest churchmen while Anselm submitted on the question of homage. With the London settlement and the English victory at Tinchebrai, the Anglo-Norman state was reunified and at peace.

In the years following, Henry married his daughter Matilda (also called Maud) to Emperor Henry V of Germany and groomed his only legitimate son, William, as his successor. Henry's right to Normandy was challenged by William Clito, son of the captive Robert Curthose, and Henry was obliged to repel two major assaults against eastern Normandy by William Clito's supporters: Louis VI of France, Count Fulk of Anjou, and the restless Norman barons who detested Henry's ubiquitous officials and high taxes. By 1120, however, the barons had submitted, Henry's son had married into the Angevin house, and Louis VI--defeated in battle--had concluded a definitive peace.

The settlement was shattered in November 1120, when Henry's son perished in a shipwreck of the "White Ship," destroying Henry's succession plans. After Queen Matilda's death in 1118, he married Adelaide of Louvain in 1121, but this union proved childless. On Emperor Henry V's death in 1125, Henry summoned the empress Matilda back to England and made his barons do homage to her as his heir. In 1128 Matilda married Geoffrey Plantagenet, heir to the county of Anjou, and in 1133 she bore him her first son, the future king Henry II. When Henry I died at Lyons-la-Forzt in eastern Normandy, his favourite nephew, Stephen of Blois, disregarding Matilda's right of succession, seized the English throne. Matilda's subsequent invasion of England unleashed a bitter civil war that ended with King Stephen's death and Henry II's unopposed accession in 1154.

Assessment

Henry I was a skillful, intelligent monarch who achieved peace in England, relative stability in Normandy, and notable administrative advances on both sides of the Channel. Under Henry, the Anglo-Norman state his father had created was reunited. Royal justices began making systematic tours of the English shires, but, although his administrative policies were highly efficient, they were not infrequently regarded as oppressive. His reign marked a significant advance from the informal, personal monarchy of former times toward the bureaucratized state that lay in the future. It also marked a shift from the wide-ranging imperialism of earlier Norman leaders to consolidation and internal development. In the generations before Henry's accession, Norman dukes, magnates, and adventurers had conquered southern Italy, Sicily, Antioch, and England. Henry won his major battles but preferred diplomacy or bribery to the risks of the battlefield. Subduing Normandy in 1106, he contented himself with keeping domestic peace, defending his Anglo-Norman state against
rebellion and invasion, and making alliances with neighbouring princes.

Notes for William IX Duke Of Aquitaine:
William IX (b. Oct. 22, 1071--d. Feb. 10, 1127, Poitiers, Fr.), medieval troubadour, count of Poitiers and duke of Aquitaine and of Gascony (1086-1127), son of William VIII and grandfather of the famous Eleanor of Aquitaine.

William IX spent most of his life in warfare, including leading an unsuccessful Crusade to the Holy Land (1101-02) and battling the Moors near Cordova (1120-23). His fame rests chiefly, however, on his being the first poet in the Proveneal language whose works have come down to us. His chansons, or songs, are boisterous, amorous, humorous, usually delicate but sometimes coarsely obscene and tend, in the fashion of courtly love, to idolize one's lady love.

Aunque era clérigo, a la muerte de su hermano el rey Alfonso I el Batallador, fue reconocido como monarca por la nobleza aragonesa, para evitar el cumplimiento del testamento de aquél, que había legado sus reinos a las órdenes militares. Por de pronto, Navarra recuperó su independencia, con García V Ramírez. Ramiro II casó con Inés de Poitiers, naciendo del matrimonio una niña, Petronila. El principal problema que se planteó fue buscar matrimonio para Petronila. Inicialmente se pensó en el príncipe Sancho de Castilla. Finalmente se optó por casarla con el conde de Barcelona, Ramón Berenguer IV. Los esponsales se celebraron en el año 1137. Ramiro II retornó al convento, conservando hasta su muerte el título de rey.

Alfonso II (1152 - 1196). Rey de Aragón. Poeta y legislador. Heredó posesiones en Francia y el Condado de Barcelona.

Alfonso II (b. 1152, Barcelona--d. 1196, Perpignan, Roussillon), count of Barcelona from 1162 and king of Aragon from 1164.

The son of Ramón Berenguer IV, Alfonso succeeded his father as count of Barcelona and his mother as ruler of Aragon, thus associating the two countries under the house of Barcelona, a union that was destined to be permanent. Aragonese involvement in France became steadily greater during Alfonso's reign. Nevertheless, the conquest of Teruel (1171) opened the way for the conquest of Valencia; and, in 1179, the pact of Cazorla with his ally, Alfonso VIII of Castile, fixed the future zones of reconquest for the two countries. In his will Alfonso followed the Spanish custom of dividing his kingdom; Provence was thus lost to the Aragonese crown.

Béla III (d. 1196), king of Hungary (1173-96) under whom Hungary became the leading power of south-central Europe.

Béla was educated at the Byzantine court and placed on the throne by force of arms by the Byzantine emperor Manuel I Comnenus in 1173. He made the Hungarian monarchy hereditary by naming his infant son, Imre, his successor. He also made his court among the most brilliant in Europe. Béla adopted Roman Catholicism, sought the assistance of Rome, and established close ties with France. Upon the death of his first wife, Anne of Chatillon, he married Margaret, sister of Philip II Augustus of France. Many leading Hungarian diplomats were educated in Paris during his reign, and the Cistercian and Premonstratensian monks he invited to Hungary introduced advanced agricultural methods there.

Internationally, Béla was only partly successful in his attempts to recover Dalmatia in two bloody wars with Venice (1181-88 and 1190-91), but he did help the Raskan Serbs gain independence from the Greeks and establish a native monarchy. He tried to make Galicia an appanage of his younger son Andrew, and he aided the Byzantine emperor Isaac II Angelus against the Bulgars. Béla III was one of the stronger rulers from the house of Irpid.

Notes for Pierre De Courtenay I:
El imperio latino de Oriente se derrumba tras la conquista de Constantinopla por parte de los griegos.
Fundado por los cruzados en 1204 tras la conquista del imperio bizantino, que se dividió entonces en tres reinos, dos griegos y uno latino en Constantinopla, lleva desde su fundación una vida muy apagada.
Su primer emperador, Balduino I, conde de Flandes, tiene que luchar contra la resistencia bizantina y contra los bslgaros, y es vencido y hecho prisionero en Adrianipolis en 1205.
Enrique I (1205-1216), consigue reconciliarse con los bizantinos, en el interior, y conquista Tracia y parte de Misia y Bitania. Pero a su muerte se inicia la decadencia del imperio.
Su sucesor, PEDRO DE COURTINAY cae prisionero de los bslgaros antes de llegar a Constantinopla, y se hace cargo del poder su cunada Yolanda. A esta la sucede Roberto de Courtenay (1221-1228), de caricter débil, que ve reducida su irea de soberanka a la zona de Constantinopla.
A su muerte ocupa el poder Balduino II (1228-1261), menor de edad. A pesar de la ayuda de los venecianos en 1236 Constantinopla esti a punto de caer en manos bslgaras; sólo lo impide la falta de coordinación de los enemigos.
En 1261, el emperador de Nicea, Miguel VIII Paleólogo, ante la ausencia de los venecianos y la falta de apoyo occidental, asedia la ciudad y la conquista finalmente el 25 de julio.
Balduino II logra huir, y un mes mis tarde Miguel Paleólogo se corona emperador de Constantinopla en Santa Sofia.

Notes for Ramón IV Berenguer (Conde de Barcelona):
Ramon Berenguer IV, byname RAMON BERENGUER THE HOLY, Catalan RAMON BERENGUER EL SANT (b. c. 1113--d. Aug. 6, 1162, Borgo San Dalmazzo, Piedmont [Italy]), count of Barcelona from 1131 to 1162, regent of Provence from 1144 to 1157, and ruling prince of Aragon from 1137 to 1162.

The elder son of Ramon Berenguer III, he continued his father's crusading wars against the Spanish Muslims. The kingdom of Aragon soon sought Ramon Berenguer IV's aid against Castile. In the course of their negotiations, he was promised the hand of the Aragonese king Ramiro II's daughter and heir, Petronila (Peronella); they were married on Aug. 11, 1137, and a few months later (November 13), Ramiro II abdicated in favour of his daughter and son-in-law. Ramon Berenguer IV thus became the last count of Barcelona to take this as his principal title, for, from 1137, he was also ruler of Aragon (though he himself never assumed the title of king). From the reign of his son, who in 1162 succeeded him with the title of Alfonso II, the counts of Barcelona styled themselves, in the first place, kings of Aragon.

When Ramon Berenguer IV's father had died, he had left the county of Provence to a younger son. When this son died, his brother Ramon Berenguer IV acted as regent (conventionally with the title Ramon Berenguer II of Provence) until the legitimate heir, his young nephew, reached majority in 1157, as Ramon Berenguer III of Provence. When this count of Provence died in 1166 without a
male heir, he was succeeded by Ramon Berenguer IV's son Alfonso II, king of Aragon. By his wars and conquests from the Moors--Tortosa (1148), Lerida, Mequinenza, and Fraga (1149), and Prades and Siurana (1153)--Ramon Berenguer IV definitively established the boundaries of the principality of Catalonia.

Alfonso II (1152 - 1196). Rey de Aragón. Poeta y legislador. Heredó posesiones en Francia y el Condado de Barcelona.

Alfonso II (b. 1152, Barcelona--d. 1196, Perpignan, Roussillon), count of Barcelona from 1162 and king of Aragon from 1164.

The son of Ramón Berenguer IV, Alfonso succeeded his father as count of Barcelona and his mother as ruler of Aragon, thus associating the two countries under the house of Barcelona, a union that was destined to be permanent. Aragonese involvement in France became steadily greater during Alfonso's reign. Nevertheless, the conquest of Teruel (1171) opened the way for the conquest of Valencia; and, in 1179, the pact of Cazorla with his ally, Alfonso VIII of Castile, fixed the future zones of reconquest for the two countries. In his will Alfonso followed the Spanish custom of dividing his kingdom; Provence was thus lost to the Aragonese crown.

Henry VI (b. autumn 1165, Nijmegen, Neth.--d. Sept. 28, 1197, Messina, Italy), German king and Holy Roman emperor of the Hohenstaufen dynasty who increased his power and that of his dynasty by his acquisition of the kingdom of Sicily through his marriage to Constance I, posthumous daughter of the Sicilian king Roger II. Although Henry failed in his objective of making the German crown hereditary, like the Sicilian crown, his son Frederick II, who became king of
Sicily immediately after Henry VI's death, was subsequently elected Holy Roman emperor.

A son of the emperor Frederick I Barbarossa, Henry was chosen German king at Bamberg in June 1169 and crowned at Aachen in August of that year. He was married to Constance, who was 11 years older than he, in January 1186 in Milan. On the departure of Frederick I for the Holy Land on a crusade at Easter 1189, Henry took over the government of the empire. In 1189-90 he suppressed a revolt of Henry the Lion, former duke of Bavaria and Saxony.

In November 1189, William II of Sicily died, leaving his father's half sister Constance heiress to the Sicilian kingdom, then consisting of the island of Sicily and the southern part of the Italian peninsula. After the death of Frederick I on crusade in June 1190, Henry VI made peace with Henry the Lion and proceeded to Italy, where he was crowned emperor by Pope Celestine III in April 1191.

Meanwhile in Sicily a nationalist party unwilling to be governed by a German emperor chose Tancred, an illegitimate son of Constance's brother Roger, as king of Sicily. After his coronation, Henry, determined to conquer the Sicilian kingdom, besieged Naples. But when Henry the Lion, aided by others, once again revolted, Henry was forced to raise the siege (August 1191) and return

to Germany. The Emperor's position was soon strengthened, however, by the imprisonment of King Richard I of England by Leopold V, duke of Austria, in December 1192. When the Duke turned the English king over to Henry in the following February, Richard, in order to obtain his release, agreed to surrender his kingdom to the Emperor, receive it back as a fief, and pay a ransom of 100,000 silver marks as well as an additional 50,000 marks in lieu of helping Henry conquer the Sicilian kingdom.

Henry the Lion came to terms with the Emperor in March 1194, and Henry VI was then free to turn his attention to Sicily. He had already, in January 1194, concluded the Treaty of Vercelli with the towns of Lombardy, thus ensuring their loyalty. His task was also made easier by the death in February 1194 of Tancred, who left as his heir a mere boy, William III. Thus, when Henry went to Italy in May 1194, he met with little resistance. He entered Palermo on November 20 and was crowned king of Sicily on December 25.

In the winter of 1195-96, Henry induced about 50 princes to agree to make the succession to the crown of the Holy Roman Empire hereditary, and at the Diet of Würzburg (April 1196) a majority voted for it. A minority, however, continued to oppose it, and at the Diet of Erfurt (October 1196) this opposition was increased. Finally, Henry had to be content with the election of his son Frederick as German king in the customary way in December.

In 1197, when Henry was in southern Italy preparing a crusade, a rebellion against his rule broke out in the Sicilian kingdom, which was put down with savage cruelty. In the same year Henry died of malaria at Messina.

Notes for Constanza de Sicilia (Emperatriz Rom Ger):
Constance, German KONSTANZE, Italian COSTANZA (b. 1154--d. Nov. 27, 1198, Palermo), queen of Sicily (1194-98) and Holy Roman empress-consort (1191-97), whose marriage to a Hohenstaufen gave that German dynasty a claim to the throne of Sicily and whose political skill preserved the throne for her son.

The daughter of King Roger II of Sicily, Constance married the future emperor Henry VI in 1186 and was crowned with him in Rome in 1191. On the death of her nephew William II (1189), she claimed the Sicilian throne. The Sicilians, however, supported Tancred of Lecce, her natural nephew, who waged war against her and actually held her prisoner. The death of Tancred (1194) allowed Henry and Constance to take the throne of Sicily.

When Henry died in 1197, Constance consolidated her power in the kingdom, secured the protection of Pope Innocent III, and succeeded in having her son, the future emperor Frederick II,crowned king in April 1198.

Notes for John, King Of England:
John, byname JOHN LACKLAND, French JEAN SANS TERRE (b. Dec. 24, 1167, Oxford--d. Oct. 18/19, 1216, Newark, Nottinghamshire, Eng.), king of England from 1199 to 1216. In a war with the French king Philip II, he lost Normandy and almost all his other possessions in France. In England, after a revolt of the barons, he was forced to seal the Magna Carta (1215).

Youth and rivalry for the crown

John was the youngest son of Henry II and Eleanor of Aquitaine. Henry's plan (1173) to assign to John, his favourite son (whom he had nicknamed Lackland), extensive lands upon his marriage with the daughter of Humbert III, count of Maurienne (Savoy), was defeated by the rebellion the proposal provoked among John's elder brothers. Various provisions were made for him in England (1174-76), including the succession to the earldom of Gloucester. He was also granted the lordship of Ireland (1177), which he visited from April to late 1185, committing youthful political indiscretions from which he acquired a reputation for reckless irresponsibility. Henry's continued favour to him contributed to the rebellion of his eldest surviving son, Richard I (later called Coeur de Lion), in June 1189. For obscure reasons John deserted Henry for Richard.

On Richard's accession in July 1189, John was made count of Mortain (a title that became his usual style), was confirmed as lord of Ireland, was granted lands and revenues in England worth 6,000 a year, and was married to Isabella, heiress to the earldom of Gloucester. He also had to promise (March 1190) not to enter England during Richard's absence on his crusade. But John's actions were now dominated by the problem of the succession, in which his

nephew, the three-year-old Arthur I, duke of Brittany, the son of his deceased elder brother Geoffrey, was his only serious rival. When Richard recognized Arthur as his heir (October 1190), John immediately broke his oath and returned to England, where he led the opposition to Richard's dictatorial chancellor, William Longchamp. On receiving the news in January 1193 that Richard, on his way back from the crusade, had been imprisoned in Germany, John allied himself with King Philip II Augustus of France and attempted unsuccessfully to seize control of England. In April 1193 he was forced to accept a truce but made further arrangements with Philip for the division of Richard's possessions and for rebellion in England. On Richard's return, early in 1194, John was banished and deprived of all his lands. He was reconciled to Richard in May and recovered some of his estates, including Mortain and Ireland, in 1195, but his full rehabilitation came only after the Bretons had surrendered Arthur to Philip II in 1196. This led Richard to
recognize John as his heir.

Accession to the throne.

In 1199 the doctrine of representative succession, which would have given the throne to Arthur, was not yet generally accepted, and following Richard's death in April 1199 John was invested as duke of Normandy and in May crowned king of England. Arthur, backed by Philip II, was recognized as Richard's successor in Anjou and Maine, and it was only a year later, in the Treaty of Le Goulet, that John was recognized as successor in all Richard's French possessions, in
return for financial and territorial concessions to Philip.

War with France.

The renewal of war in France was triggered by John's second marriage. His first wife, Isabella of Gloucester, was never crowned, and in 1199 the marriage was dissolved on grounds of consanguinity, both parties being great-grandchildren of Henry I. John then intervened in the stormy politics of his county of Poitou and, while trying to settle the differences between the rival families of Lusignan and Angoulzme, himself married Isabella (August 1200), the heiress to Angoulzme, who had been betrothed to Hugh IX de Lusignan. This politically conceived marriage provoked the Lusignans into rebellion the next year; they appealed to Philip II, who summoned John to appear before his court. In the general war that followed his failure to answer this summons, John had a temporary success at Mirebeau in August 1202, when Arthur of Brittany was captured, but Normandy was quickly lost (1204). By 1206, Anjou, Maine, and parts of Poitou had also gone over to King Philip.

These failures, foreshadowed under Henry II and Richard, were brought about by the superiority of French resources and the increasing strain on those of England and Normandy. Nevertheless, they were a damaging blow to John's prestige, and, equally important, they meant that John resided now almost permanently in England. This factor, coinciding with the death (1205) of the chancellor and archbishop of Canterbury, Hubert Walter, gave his government a much more

personal stamp, which was accentuated by the promotion of members of his household to important office. His determination to reverse the continental failure bore fruit in ruthlessly efficient financial administration, marked by taxation on revenues, investigations into the royal forests, taxation of the Jews, a great inquiry into feudal tenures, and the increasingly severe exploitation of his feudal prerogatives. These measures provided the material basis for the charges of tyranny later brought against him.

Quarrel with the church.

John's attention was diverted and his prestige disastrously affected by relations with the papacy. In the disputed election to the see of Canterbury following the death of Hubert Walter, Pope Innocent III quashed the election of John's nominee in procuring the election of Stephen Langton (December 1206). John, taking his ground on the traditional rights of the English crown in episcopal elections, refused to accept Langton. In March 1208, Innocent laid an interdict on England and excommunicated John (November 1209). The quarrel continued until
1213, by which time John had amassed more than 100,000 from the revenues of vacant or appropriated sees and abbeys. But such a dispute was a dangerous hindrance to John's intention to recover his continental lands. In November 1212 he agreed to accept Langton and the Pope's terms. Apparently at his own behest, he surrendered his kingdom to the papal nuncio at Ewell, near Dover, on May 15, 1213, receiving it back as a vassal rendering a tribute of 1,000 marks (666 13s. 4d.) a year. He was absolved from excommunication by Langton in July 1213, and the interdict was finally relaxed a year later. John thus succeeded in his aim to secure the papacy as a firm ally in the fight with Philip and in the struggle already pending with his own baronage. But his treatment of the church during the interdict, although arousing little if any opposition among the laity at the time, angered monastic chroniclers, who henceforth loaded him with charges of tyranny, cruelty, and, with less reason, of sacrilege and irreligion.

Baronial rebellion and the Magna Carta.

In August 1212 recurrent baronial discontent had come to a head in an unsuccessful plot to murder or desert John during a campaign planned against the Welsh. Pope Innocent's terms had included the restoration of two of those involved, Eustace de Vesci and Robert Fitzwalter, and, although the barons soon lost papal support, they retained the protection of Stephen Langton. John, skillfully isolating the malcontents, was able to launch his long-planned campaign against the French, landing at La Rochelle in February 1214. He achieved nothing decisive and was forced to accept a truce lasting until 1220. Returning to England in October 1214, he now had to face much more widespread discontent, centred mainly on the northern, East Anglian, and home counties. After lengthy negotiations in which both sides appealed to the Pope, civil war broke out in May 1215. John was compelled to negotiate once more when London went over to the rebels in May, and on June 19 at Runnymede he accepted the baronial terms embodied in the Magna Carta, which ensured feudal rights and restated English law. This settlement was soon rendered

unworkable by the more intransigent barons and John's almost immediate appeal to Pope Innocent against it. Innocent took the King's side, and in the ensuing civil war John captured Rochester castle and laid waste the northern counties and the Scottish border. But his cause was weakened by the arrival of Prince Louis (later Louis VIII) of France, who invaded England at the barons' request. John continued to wage war vigorously but died, leaving the issues undecided. His death made possible a compromise peace, including the restoration of the rebels, the succession of his son Henry III, and the withdrawal of Louis.

Assessment

John's reputation, bad at his death, was further depressed by writers of the next generation. Of all centuries prior to the present, only the 16th, mindful of his quarrel with Rome, recognized some of his quality. He was suspicious, vengeful, and treacherous; Arthur I of Brittany was probably murdered in captivity, and Matilda de Braose, the wife of a recalcitrant Marcher baron, was starved to death with her son in a royal prison. But John was cultured and literate. Conventional in
his religion rather than devout, he was remembered for his benefactions to the church of Coventry, to Reading Abbey, and to Worcester, where he was buried and where his effigy still survives. He was extraordinarily active, with a great love of hunting and a readiness to travel that gave him a knowledge of England matched by few other monarchs. He took a personal interest in judicial and financial administration, and his reign saw important advances at the Exchequer, in the administration of justice, in the importance of the privy seal and the royal household, in methods of taxation and military organization, and in the grant of chartered privileges to towns. If his character was unreliable, his political judgment was acute. In 1215 many barons, including some of the most distinguished, fought on his side. (J.C.H.)

William IX spent most of his life in warfare, including leading an unsuccessful Crusade to the Holy Land (1101-02) and battling the Moors near Cordova (1120-23). His fame rests chiefly, however, on his being the first poet in the Provençal language whose works have come down to us. His chansons, or songs, are

boisterous, amorous, humorous, usually delicate but sometimes coarsely obscene and tend, in the fashion of courtly love, to idolize one's lady love.

Notes for Federico I Hohenstaufen (Duque de Suabia):
Hohenstaufen DYNASTY, also called STAUFER DYNASTY, German dynasty that ruled the Holy Roman Empire from 1138 to 1208 and from 1212 to 1254. The founder of the line was the count Frederick (died 1105), who built Staufen Castle in the Swabian Jura Mountains and was rewarded for his fidelity to Emperor Henry IV by being appointed duke of Swabia as Frederick I in 1079. He later married Henry's daughter Agnes. His two sons, Frederick II, duke of Swabia, and Conrad, were the heirs of their uncle, Emperor Henry V, who died childless in 1125. After the interim reign of the Saxon Lothair III, Conrad became German king and Holy Roman emperor as Conrad III in 1138. Subsequent Hohenstaufen rulers were Frederick I Barbarossa (Holy Roman emperor 1155-90), Henry VI (Holy Roman emperor 1191-97), Philip of Swabia (king 1198- 1208), Frederick II
(king, 1212-50, emperor 1220-50), and Conrad IV (king 1237-54). The Hohenstaufen, especially Frederick I and Frederick II, continued the struggle with the papacy that began under their Salian predecessors, and were active in Italian affairs.

The imperial dynasty was interrupted in 1208-12 by the brief reign of Otto IV, duke of Aquitaine of the House of Welf.

BRITANICA
Hohenstaufen, noble German family, members of which were rulers of the Holy Roman Empire and kings of Germany and Sicily. The family name was derived from the ancestral castle at Staufen (near present-day Freiburg). The family began in 1079 with the marriage of Frederick I, duke of Swabia, to Agnes, daughter of the Holy Roman emperor Henry IV; at the same time Frederick was created duke of Swabia. The royal and imperial line began in 1138 when their son, Conrad III, was elected German king. This line included the Holy Roman emperors and German kings Frederick I, Barbarossa, who was also king of Italy, and Henry VI, also king of Sicily. Frederick II was Holy Roman emperor, as well as king of Germany, Sicily, and Jerusalem. Other Hohenstaufen rulers were Philip, Holy Roman emperor and king of Germany; Conrad IV, king of Germany and Sicily; and two kings of Sicily, Manfred and Conradin. Enzio, an illegitimate son of Frederick II, assumed the title of king of Sardinia but was imprisoned; with his death the family line ended. From the accession of Conrad III, the Hohenstaufen family came into conflict with another German family, the Guelphs, or Welfs (see Guelphs and Ghibellines).

Angelus FAMILY, family that produced three Byzantine emperors. The Angelus family was of no particular significance until the 12th century, when Theodora, youngest daughter of the emperor Alexius I Comnenus, married Constantine Angelus of Philadelphia (in Anatolia). Numerous members of the family then held high positions under Manuel I Comnenus and were involved in an aristocratic revolution that in 1185 overthrew Andronicus I Comnenus and placed Isaac II Angelus on the throne. Isaac and his brother Alexius III, who deposed and blinded Isaac in 1195, were among the least competent of all Byzantine rulers.

The despots of Epirus and Thessaly, who saved much of northern Greece from Western conquest after 1204 and whose dynasty survived until 1318, were direct descendants of Constantine Angelus and Theodora. One of the last prominent members of the family was John Angelus, who was appointed governor of Thessaly in 1342.

Notes for Luis VIII (Rey de Francia):
Louis VIII, byname LOUIS THE LION, or THE LION-HEART, French LOUIS LE LION, or LOUIS COEUR-DE-LION (b. Sept. 5, 1187, Paris--d. Nov. 8, 1226, Montpensier, Auvergne, Fr.), Capetian king of France from 1223 who spent most of his short reign establishing royal power in Poitou and Languedoc.

On May 23, 1200, Louis married Blanche of Castile, daughter of Alfonso VIII of Castile, who effectively acted as regent after Louis's death. In 1212 Louis seized Saint-Omer and Aire to prevent a powerful Flanders from being on the flank of his county of Artois. In 1216, after the barons rebelling against King John of England had offered the English throne to Louis in return for his aid,

Louis went to England to aid the rebels. Initially he was successful, but eventually he was
defeated at sea and suffered defections. In 1217, when peace was concluded at Kingston, Louis was secretly paid 10,000 marks. In 1224, now king, he seized Poitou and, in 1226, he launched a successful crusade against the Albigensian heretics, capturing the major fortress of Avignon before returning toward Paris because of illness.

Louis was the first Capetian to grant appanages on a large scale and to have a reversion clause that made alienation of royal property more difficult. Louis also developed other particular rights for the kingship, such as the concept that fealty was sworn not only to the individual king but also to the kingship. His eldest son, Louis IX (afterward St. Louis), peacefully succeeded him while his other sons received appanages.

Louis VIII (1187-1226), king of France (1223-26), son and successor of Philip II (Philip Augustus), born in Paris. Before his succession he assisted his father in several campaigns to win control of French territories belong to John, the Angevin, or Plantagenet, king of England. Philip II previously had conspired with John against John's brother, King Richard I of England, but later turned against him. In 1215 Louis was offered the crown of England by a group of barons in rebellion against King John; Louis led an expedition to England but was unsuccessful in claiming the throne; John died in the midst of the struggle and was succeeded by his son Henry III. The French invaders were excommunicated by the papal legate in England and were defeated in battle at Lincoln. Louis returned to France in 1217 and there took part in crusades against a dissident religious sect called the Albigenses, or Cathars. After succeeding his father as king, Louis continued Philip's policy of destroying the power of the Plantagenets in France and bringing under royal authority the provinces held by the Albigenses in the south of France. He was succeeded by his son Louis IX.

Notes for Blanca de Castilla (Reina de Francia):
Blanche OF CASTILE, French BLANCHE DE CASTILLE, Spanish BLANCA DE CASTILLA (b. 1188, Palencia, Castile [Spain]--d. Nov. 12, 1252, Paris, France), wife of Louis VIII of France, mother of Louis IX (St. Louis), and twice regent of France (1226-34, 1248-52), who by wars and marital alliances did much to secure and unify French territories.

Blanche was the daughter of Alfonso VIII of Castile and Eleanor, who was the daughter of Henry II of England. Her grandmother Eleanor of Aquitaine, queen of England, traveled to Spain to take the 11-year-old Blanche to France, where a marriage treaty was concluded with Louis, the young son of King Philip II Augustus. This politically motivated marriage had been arranged by Blanche's uncle, King John of England, and was celebrated in 1200 at Portsmouth,

Hampshire. It represented only a brief truce in the struggle between England and France for control over certain French territories.

Blanche, who became French through marriage, was gradually to become French in spirit as well. Although she did not cease to be concerned for her family, among them her uncle John and his allies, her brother-in-law Ferrand of Portugal, and her cousin Otto of Brunswick (later Holy Roman emperor Otto IV), she rejoiced at the French victory over Otto and the English at Bouvines in 1214,
marking the first stage of French unification, a goal for which she was constantly to strive. In the same year, she gave birth to Louis, the future king of France. Upon John of England's death, Blanche boldly tried to seize the English throne: in 1216 Louis of France invaded England on her behalf. The English stood firm against him, and John's nine-year-old son was finally crowned Henry III.

A devout Roman Catholic, Blanche soon became involved in what she sincerely believed to be a holy war against the heretical Cathari, a sect founded on the belief that good and evil had two separate creators, which was flourishing throughout southern France. Her husband, who became Louis VIII in 1223, took part in a crusade against the Cathari but suffered a fatal attack of dysentery upon returning to the north of France in 1226. In accordance with her husband's will, Blanche became both guardian of the 12-year-old Louis and regent of France. She zealously pressed to have Louis crowned immediately, and the coronation took place at Reims three weeks after Louis VIII's death.

Her most pressing problem was to deal with a rebellion of the great barons, organized by Philip Hurepel, the illegitimate son of King Philip II Augustus, and supported by King Henry III of England. In the face of such adversity, Blanche showed herself by turns a delicate diplomat, a clever negotiator, and a strong leader. Dressed in white, on a white palfrey draped in the same colour, she rode into battle at the head of her troops. After an attempted abduction of the young king, Blanche did not hesitate to replace rebel noble associates with commoners if she thought it necessary. She also created local militias. Blanche was gradually able to subdue the revolt, establish a new truce with England, and, in 1229, pacify the south of France by signing the Treaty of Paris with Raymond VII, count of Toulouse. France then entered an era of domestic stability, which saw the construction of many cathedrals throughout the country.

On only one occasion did Blanche fail to exhibit diplomatic conduct. In 1229 a dispute between an innkeeper and some students took place in the Latin Quarter in Paris. The police were summoned, and the students were beaten and thrown into the Seine; such intervention in the Latin Quarter, however, was contrary to the prerogatives granted to the university, and the faculty and students
threatened to strike if the university's privileges were not respected. Badly advised, Blanche held firm, but the university closed its doors, and the faculty and students left Paris for the provinces and abroad. It was to take four years and the intervention of the pope before the university would return to Paris with new prerogatives, this time granted by Blanche herself.

Although Louis IX came of age on April 25, 1236, Blanche remained at his side as his most loyal and steadfast supporter. She lacked tact, however, with regard to her son's private life. Although Blanche herself had selected Margaret of Provence to be Louis's wife, she treated Margaret with considerable severity. In 1244, after Louis recovered from a serious illness, he and his wife, much against Blanche's wishes, made a vow to go on a crusade against the Muslims. They embarked in 1248, and once again the kingdom was entrusted to Blanche. Informed of Louis's defeat at Al-Mansurah, Egypt, and his subsequent imprisonment, Blanche herself went to seek his ransom and that of the French army. She petitioned her parents, her allies, and the pope for funds and supplies, but interest in the crusade had dwindled.

Although weakened by a heart ailment, Blanche did not neglect her obligations as a regent. Continuing to preside over council meetings, she signed laws and watched over the poor of Paris. When some of the poor were mistreated by the cathedral chapter, she herself rode, as formerly, to open the gates to their prison. On her way to the Abbey of the Lys, one of her favourite retreats, Blanche suffered an attack of the heart ailment that was to take her life. She was returned to the palace of the Louvre, dressed in a nun's habit, and laid on a bed of hay. There, after begging forgiveness of all and having received the last sacraments, she died. She was buried at Maubuisson Abbey and her heart taken to the Abbey of the Lys. Louis IX was in Jaffa when he learned of his mother's death. The news distressed him greatly, for he was aware that he had lost not only an incomparable parent but also the strongest supporter of his kingship.

Notes for Luis IX El Santo Rey de Francia:

Louis IX, also called SAINT LOUIS (b. April 25, 1214, Poissy, Fr.--d. Aug. 25, 1270, near Tunis; canonized Aug. 11, 1297, feast day August 25), king of France from 1226 to 1270, the most popular of the Capetian monarchs. He led the Seventh Crusade to the Holy Land in 1248-50 and died on another crusade to Tunisia.

Early life.

Louis was the fourth child of King Louis VIII and his queen, Blanche of Castile, but, since the first three died at an early age, Louis, who was to have seven more brothers and sisters, became heir to the throne. He was raised with particular care by his parents, especially his mother.

Experienced horsemen taught him riding and the fine points of hunting. Tutors taught him biblical history, geography, and ancient literature. His mother instructed him in religion herself and educated him as a sincere, unbigoted Christian. Louis was a boisterous adolescent, occasionally seized by fits of temper, which he made efforts to control.

When his father succeeded Philip II Augustus in 1223, the long struggle between the Capetian dynasty and the Plantagenets of England (who still had vast holdings in France) was still not settled, but there was a temporary lull, since the English king, Henry III, was in no position to resume the war. In the south of France the Albigensian heretics, who were in revolt against both church and state, had not been brought under control. Finally, there was ferment and the threat of revolt among the great nobles, who had been kept in line by the firm hand of Philip Augustus.

Louis VIII managed to bring these external and internal conflicts to an end. In 1226 Louis VIII turned his attention to quelling the Albigensian revolt, but he unfortunately died at Montpensier on Nov. 8, 1226, on returning from a victorious expedition. Louis IX, who was not yet 13, became king under the regency of his redoubtable mother.

Accession to the throne.

The Queen Mother's first concern was to take Louis to Reims to be crowned. Many of the most powerful nobles refrained from participating in the ceremony, but Blanche was not a woman to be discouraged by adversity. While continuing her son's education she vigorously attacked the rebellious barons, particularly Hugh of Lusignan and Peter of Dreux (Pierre Mauclerc), duke of Brittany. Without support from King Henry III of

England the baronial coalition collapsed, and the Treaty of Vendôme
gave Blanche a brief respite.

She took advantage of it to put an end to the Albigensian revolt. Louis's troops were sent into Languedoc, where they forced Raymond VII, count of Toulouse, to concede defeat. On April 11, 1229, the King imposed the Treaty of Paris on Raymond, in accordance with the terms of which Raymond's daughter was to marry the King's brother Alphonse, and, after their deaths, all of Languedoc would revert to the royal domain. As a political debut it was a magnificent success. When the students at the University of Paris revolted for a trivial reason, Louis, on his mother's advice, closed the university
and ordered the students and professors to disperse, thereby strengthening the royal authority.

The problem of the Plantagenet holdings in France remained. Supported by Peter of Dreux, Henry III landed in Brittany and attempted an expedition in the west of France. Louis IX, though only 15, personally commanded the troops. He ordered the château at Angers to be rebuilt and pushed toward Nantes, where Henry was based. There was not even a battle, for, after a futile ride to Bordeaux, Henry withdrew. Truces were renewed, and Peter of Dreux submitted to Louis's authority.

When Blanche laid down the reins of government in 1234, the kingdom was temporarily at peace. Louis IX could now think about marriage. He was a splendid knight whose kindness and engaging manner made him popular. And he was a just king: although he exacted what was due him, he had no wish to wrong anyone, from the lowest peasant to the richest vassal. He often administered justice personally, either in the great hall of the Palais de la Cité, which he later endowed with a magnificent chapel, or in his Vincennes manor, where he assembled his subjects at the foot of an oak, a scene often recalled by his biographer Jean de Joinville, the seneschal of Champagne. He was also a pious king, the protector of the church and friend of those in holy orders. In 1228 he founded the noted Abbey of Royaumont. Although respectful of the pope, he staunchly resisted unreasonable papal demands and protected his clergy.

Blanche had selected Margaret, daughter of Raymond Berenger IV, the count of Provence, as Louis's wife. The marriage was celebrated at Sens, May 29, 1234, and Louis showed himself to be an eager and ardent husband, which made Blanche intensely jealous of her daughter-in-law. Louis and Margaret had 11 children.

After subduing Thibaut of Champagne, Louis IX had to set out again for Aquitaine. This time the rebel was Hugh of Lusignan, who had married the widowed mother of Henry III. Once again Henry descended on the Continent, this time at Royan, with a powerful force. The majority of the nobles in the west of France united with him. An almost bloodless encounter at the bridge of Taillebourg in 1242 resulted in defeat for the English, and Henry returned to London. With each truce slightly more progress was made toward gaining a peace that would put a permanent end to the Hundred Years' War between France and England.

Leadership of the Seventh Crusade.

After his victory over the English, Louis IX fell seriously ill with a form of malaria at Pontoise-lés-Noyon. It was then, in December 1244, that he decided to take up the cross and go to free the Holy Land, despite the lack of enthusiasm among his barons and his entourage. The situation in the Holy Land was critical; Jerusalem had fallen into Muslim hands on Aug. 23, 1244, and the armies of the Sultan of Egypt had seized Damascus. If aid from the West was not forthcoming, the Christian kingdom of the east would soon collapse. In Europe the times had never been more propitious for a crusade. There was a respite in the great struggle between the Holy Roman Empire and the papacy; moreover, Louis IX's forceful attitude toward the Holy Roman emperor, Frederick II, had dampened the latter's enthusiasm for war. The kingdom of France was at peace, and the barons agreed to accompany their sovereign in the Seventh Crusade.

The preparations were long and complex. After entrusting the regency to his mother, Louis IX finally embarked from Aigues-Mortes on Aug. 25, 1248. He took his wife and children with him, since he preferred not to leave the mother and daughter-in-law alone together. His fleet comprised about 100 ships carrying 35,000 men. Louis's objective was simple: he intended to land in Egypt, seize the principal towns of the country, and use them as hostages to be exchanged for Syrian cities.

The beginning was promising. After wintering in Cyprus, the expedition landed near Damietta, Egypt, in June 1249. The King was one of the first to leap onto land, where he planted the oriflamme of St. Denis on Muslim territory. The town and port of Damietta were strongly fortified, but on June 6 Louis IX was able to enter the city. He then pushed on toward Cairo, but the rain-swollen waters of the Nile and its canals stopped him for several months. It was necessary to capture the citadel of al-Mansurah. After several attempts, a pontoon bridge was finally built, and the battle took place on Feb. 8, 1250. The

outcome of the struggle was for a long time undecided, and the King's brother Robert of Artois was killed. Louis finally gained control of the situation through his energy and self-possession.

But the army was exhausted. The Nile carried thousands of corpses away from al-Mansurah, and plague struck the survivors. The King had to issue orders for the agonizing retreat toward Damietta. Louis IX, stricken in turn, dragged himself along in the rear guard of his disintegrating force. The Egyptians harassed the fleeing army and finally captured it on April 7, 1250.

After long negotiations, the King and his principal barons were freed for a high ransom, and Louis rejoined his wife at Acre. The crusaders would have preferred to return to France, but the King decided instead to remain. In four years he was to transform a military defeat into a diplomatic success, conclude advantageous alliances, and fortify the Christian cities of Syria. He returned to his kingdom only upon learning of his mother's death.

Achievement of peace and administrative reforms.

The saintly Louis enjoyed immense prestige throughout western Christendom. He took advantage of this to open negotiations for a lasting peace with the English king, Henry III, who had become his brother-in-law. The discussions extended over several years, but the treaty was finally signed in Paris on May 28, 1258. The terms of the treaty were generous with regard to the Plantagenets. Although Louis could have stripped Henry III of all his continental holdings, he left him Aquitaine and some neighbouring territories. In return, the King of England acknowledged himself to be Louis's vassal. In Louis's eyes this was the most important point, for in the 13th century the power of a sovereign was measured less by the extent of his possessions than by the number and importance of his vassals. A just and equitable ruler, Louis also wanted to create goodwill between his children and those of the Plantagenets. The King's reputation for impartiality was so great that he was often called upon to arbitrate disputes outside France, as he once did in a violent dispute between Henry III and his barons.

He took advantage of his authority to reorganize the administration of his kingdom. Some of his officials, profiting by his absence, had abused their power. Louis IX appointed royal investigators charged with correcting abuses on sight and with hearing complaints. Two well-known ordinances, in 1254 and 1256, carefully outlined the duties and responsibilities of officials in the royal domain, and Louis closely supervised their activities. Royal officials were forbidden to frequent taverns or to gamble, and business activities such as the purchase of land or the marriage of their daughters could be carried out only with

the King's consent. Further ordinances forbade prostitution, judicial duels, and ordeal by battle. The King imposed strict penalties on counterfeiting, stabilized the currency, and compelled the circulation of royal coinage. In general, his measures strengthened royal justice and administration and provided a firm base for French commercial growth.

Louis should not, however, be portrayed as a stained-glass figure. Like all men he had faults. He was quick-tempered and sometimes violent, and he had to struggle against his gluttony. He made his decisions alone but knew how to choose wise counsellors, and his sincere piety did not prevent him from curbing the abuses of the clergy, sometimes brutally.

The King devoted attention to the arts and to literature. He directed the construction of several buildings in Paris, Vincennes, Saint-Germain, and Corbeil (to house relics of the "True Cross"). He encouraged Vincent of Beauvais, his chaplain, to write the first great encyclopaedia,  Speculum majus. During his reign foreign students and scholars flocked to the University of Paris.

The King was very high spirited. Nothing would be more inaccurate than to imagine him entirely steeped in piety. After meals he gladly descended into his gardens, surrounded by his intimates, and discussed diverse topics with them. There, each one indulged in quodlibet, or in talking about anything that pleased him.

Death and canonization.

But throughout the latter part of his reign he was obsessed by the memory of the Holy Land, the territory of which was rapidly shrinking before the Muslim advance. In 1269 he decided once again to go to Africa. Perhaps encouraged by his brother  Charles of Anjou, he chose Tunisia as the place from which to cut the Islamic world in half. It was a serious mistake for which he must take responsibility, and he eventually had to bear the consequences of it. Ill and weak, he knew that he risked dying there.

The expedition landed near Tunis at the beginning of July 1270 and at first won a succession of easy victories. Carthage was taken. But once again plague struck the army, and Louis IX could not withstand it. After having entrusted the future of the kingdom of France to his son Philip, to whom he gave excellent instructions (enseignements), asking him especially to protect and assist the poor, who were the humblest of his subjects, he died in August 1270.

The crusade dissolved, and Louis's body was brought back to France. All along the way, through Italy, the Alps, Lyon, and Cluny, crowds gathered and knelt as the procession passed. It reached Paris on the eve of Pentecost in 1271. The funeral rites were solemnly performed at Notre-Dame de Paris, and the coffin went to rest in the abbey of Saint-Denis, the tomb of the kings of France.

Without awaiting the judgment of the Roman Catholic Church, the people considered Louis IX to be a saint and prayed at his tomb. Pope Boniface VIII canonized Louis IX, the only king of France to be numbered by the Roman Catholic Church among its saints, in 1297. (J.Le.)

Notes for Margaret Of Provence:
Margaret OF PROVENCE, French MARGUERITE DE PROVENCE (b. 1221--d. Dec. 21, 1295, Paris), eldest daughter of Raymond Berengar IV, count of Provence, whose marriage to King Louis IX of France on May 27, 1234, extended French authority beyond the Rhône.

Although Blanche of Castile, Louis IX's mother, had arranged the marriage, she was jealous of her daughter-in-law, whom she supervised strictly; Jean, Sire de Joinville, chronicler of Louis's reign, tells several stories of Blanche separating the royal couple, and Louis himself sometimes behaving brusquely toward Margaret.

Margaret accompanied Louis to Egypt on the crusade of 1248 and showed great courage at Damietta, reinspiring the crusaders after a defeat at al-Mansurah (February 1250), where Louis was captured by the Muslims. Blanche died in 1252; and Margaret, after returning to France, tried occasionally to meddle in politics. Though she was usually checked by the King's intransigence, she may have done something to improve relations between Louis and Henry III of England, who in 1236 had married her sister Eleanor. On the other hand, she resented the fact that her father (died 1245), by his will of 1238, left
Provence to her youngest sister, Beatrice, who in 1246 was married to Charles of Anjou, a brother of Louis IX. After Louis IX's death (1270) Margaret did all she could to thwart Charles's ambitions.

Notes for Bela IV (Rey de Hungrka):
Béla IV (b. 1206--d. May 3, 1270), king of Hungary (1235-70) during whose reign the Mongol invasions left three-quarters of Hungary in ruins. He was the son of Andrew II.

Routed on the banks of the Sajó River in 1241 by Mongols under Batu Khan, Béla fled to Dalmatia, and for a year the kingdom of Hungary did not exist. So nearly complete was the country's destruction that Hungarians, when referring to total calamity, use the word tatirjiris,meaning Tatar invasion.

When the Mongols withdrew because of dynastic troubles, Béla began to reconstruct his realm, a task that occupied the rest of his reign. Particularly difficult was the recovery of western portions of the kingdom seized by Frederick of Austria as the price of the aid he promised against the Mongols but never delivered. Béla defeated Frederick, who died in the battle near the Leitha River on June 15, 1246. Three years earlier Béla had been forced to cede Zadar to Venice, but he retained Split and other Dalmatian provinces. Because of his policy of religious toleration in Bosnia, that provinceremained quiet for years.

Béla fought wars with the new Serbian kingdom, founded by the Nemanja dynasty, and was frequently in conflict with Otakar II over Styria, which ultimately fell to the Bohemians. Béla turned back a second Mongol invasion of Hungary, in 1261, and he resisted the Premyslid dynasty, which had constructed a new Bohemian empire, absorbing territories of the Austrian Babenbergs and threatening Hungary itself. Béla had two sons and seven daughters by his consort, Maria, daughter of the Byzantine emperor of Nicaea, Theodore II Lascaris. Of these children, St. Margaret of Hungary became the best known.

Ferdinand I, byname FERDINAND THE GREAT, Spanish FERNANDO EL MAGNO (b. 1016/18--d. Dec. 27, 1065, León, Leon), the first ruler of Castile to take the title of king; he was also crowned emperor of Leon.

Ferdinand's father, Sancho III of Navarre, had acquired Castile and established hegemony over the Christian states. On his death in 1035 he left Navarre to his eldest son (Garcka III) and Castile to his second son, Ferdinand, who had married Sancha, sister and heiress of Bermudo III of Leon. Ferdinand's Castilians defeated and killed Bermudo at Tamarón in 1037, and he had himself crowned emperor in the city of León in 1039. In 1054 his Castilian troops defeated and
killed his elder brother, Garcka III, at Atapuerca, and he added Navarre to his possessions. In 1062 he forced the Muslim ruler of Toledo to pay him tribute and imposed vassalage on Saragossa and Seville. He conquered Coimbra in central Portugal and laid siege to Valencia, but he failed to capture it.

He followed the custom of dividing his estates, leaving Castile to the eldest, Sancho II; Leon to the second, Alfonso VI; and Galicia to the third. The first two dispossessed the third; and, on the murder of Sancho, Alfonso VI recovered the whole, becoming emperor.

Ramon Berenguer I, byname RAMON BERENGUER THE ELDER, Catalan RAMON BERENGUER EL VELL (b. 1023/24--d. May 26, 1076, Barcelona? [Spain]), count of Barcelona from 1035 to 1076.

His father, Berenguer Ramon I (reigned 1018-35), divided and bequeathed his lands among his three sons; however, Sane (or Sancho) in 1049 and Guillem (or William) in 1054 renounced their inheritances in their eldest brother's favour, thus reuniting the lands. Ramon Berenguer I also expanded his domain by securing control over the adjacent counties of Ampurias and Pallars. His most noted achievement was convoking the local Cortes (assembly) and having it deliberate on a choice of Roman and medieval laws for Catalonia. The result was the promulgation of the celebrated legal code known as the Usatges de Barcelona (1064-68).

Notes for RobertoGuiscardo, duque de Apulia y Calabria:
Robert, byname ROBERT GUISCARD, or ROBERT DE HAUTEVILLE, Italian ROBERTO GUISCARDO, or ROBERTO D'ALTAVILLA (b. c. 1015, Normandy [France]–d. July 17, 1085, near Cephalonia, Greece, Byzantine Empire), Norman adventurer who settled in Apulia, in southern Italy, about 1047 and became duke of Apulia (1059). He eventually extended Norman rule over Naples, Calabria, and Sicily and laid the foundations of the Kingdom of Sicily.

Arrival in Apulia

Robert was born into a family of knights. Arriving in Apulia, in southern Italy, around 1047 to join his half brother Drogo, he found that it and Campania, though they were southern Italy's most flourishing regions, were plagued by political disturbances. These regions attracted hordes of fortune-seeking Norman immigrants, who were to transform the political role of both regions in the
following decades.

In Campania, the Lombards of Capua were launching wars against the Byzantine dukes of Naples in order to gain possession of that important seaport. In Apulia, William ("Iron Arm") de Hauteville, Robert's eldest half brother, having successfully defeated the Byzantine Greeks who controlled that region, had been elected count of Apulia in 1042. In 1046 he had been succeeded by his brother Drogo.

When Robert joined his brothers, they sent him to Calabria to attack Byzantine territory. He began his campaign by pillaging the countryside and ransoming its people. In 1053, at the head of the combined forces of Normans from Apulia

and Campania, he defeated the haphazardly led forces of the Byzantines, the Lombards, and the papacy at Civitate. Because of the deaths of William and Drogo and of his third half brother, Count Humphrey, in 1057, Robert returned to Apulia to seize control from Humphrey's sons and save the region from disgregating internal conflicts. After becoming the recognized leader of the Apulian Normans, Robert resumed his campaign in Calabria. His brother Roger's arrival from Normandy enabled him to extend and solidify his conquests in Apulia.

In his progression from gang leader to commander of mercenary troops to conqueror, Robert emerged as a shrewd and perspicacious political figure. In 1059 he entered into a concordat at Melfi with Pope Nicholas II. Until that time the papacy had been hostile toward the Normans, considering them to be an anarchist force that upset the political structure in southern Italy--a structure based on a balance of power between the Byzantines and the Lombards of northern Italy. The schism that took place between the Greek and Latin churches in 1054 worsened the relations between the Byzantine emperors and the papacy, and eventually the papacy realized that Norman conquests over the Byzantines could work to its advantage. Robert's plan to expel the Arabs from Sicily and restore Christianity to the island also found favour in Nicholas' eyes. This expedition into Sicily got under way in 1060, as soon as the conquest of Calabria was completed. Robert entrusted the command of the expedition to his brother Roger, but on particularly difficult occasions--e.g., the siege of Palermo in 1071--he came to his brother's aid.

Until this time, Robert's relations with Roger had not always been amicable, since Roger, aware of both his own talent and Robert's dependency on him, would not settle for the subordinate role allotted him. Their differences were resolved when Robert invested Roger, after he had recognized Robert's supreme authority, with "the County of Sicily and Calabria" along with the right to govern and tax both counties.

Expansion of the Duchy

Robert continued to expand the small county left by Humphrey into a duchy, extending from the Adriatic to the Tyrrhenian sea. The capture of Bari in April 1071 resulted in the end of Byzantine rule in southern Italy. Robert turned next to the neighbouring territories of Salerno, controlled by the Lombards. Instead of fighting them, he dissolved his first marriage and in 1058 married the sister of Salerno's last Lombard prince, Gisulf II. Hostilities broke out between the two rulers, however, and Gisulf naively tried to bring about a Byzantine counteroffensive against Robert. Fearing that the Norman advances into Campania, Molise, and Abruzzi would threaten the papal dominions, Pope Gregory VII excommunicated Robert and gave Gisulf considerable military aid. The struggle came to a head when Gisulf, determined to display his power, advanced toward the prosperous city of Amalfi. Robert responded to the city's plea for help in 1073 and successfully defended it; in December 1076 he took Salerno from Gisulf and made it the capital of his duchy.

Robert was now at the height of his power. During his rise he repressed with an iron hand not only the claims of Humphrey's sons but also the uprisings of towns and lords that were fretting under the restraints imposed upon them. The harshness with which Robert chose to deal with these rebels was intended to transform a heterogeneous population into a strong, sovereign state.

When, in 1080, the conflict between church and state over the right to make ecclesiastical investitures had become more intense, Robert chose to reconcile himself with Gregory VII, entering into the Concordat of Ceprano, which confirmed the commitments of the earlier Council of Melfi. Even the Byzantine court drew closer to him and went as far as trying to establish a familial relationship with Robert. The Byzantine emperor Michael VII, in need of Robert's help to uphold his unstable throne, married his son, Constantine, to one of Robert's daughters,
Helen. The opposition party, however, deposed Michael and confined Helen in a monastery. To guarantee Apulia against attack from the new rulers of Byzantium, Robert wanted the territories on the Adriatic coast of the Balkan Peninsula, and he began to build a large navy. Michael's expulsion and Helen's confinement reawakened his unappeased spirit of adventure and hastened his long-considered expedition. Now his goal was even more ambitious: to march to Byzantium and crown himself emperor in place of the deposed Michael.

In 1083 Robert landed in Epirus with a well-trained army and immediately succeeded in defeating the Byzantines and their Venetian allies. The pope, however, suddenly recalled him to Italy to help him expel the German king Henry IV, who was marching on Rome en route to claiming southern Italy for the Holy Roman Empire. Having returned home and suppressed the revolts of the lords hostile to himself and to Pope Gregory VII, Robert moved toward Rome, defeated the pope's enemies, and escorted him to Salerno in the summer of 1084. Following this success, he returned to his campaign on the Adriatic coast. He died during the siege of Cephalonia on July 17, 1085.

Achievements

Physically attractive, endowed with an acute and unscrupulous intelligence, a brilliant strategist and competent statesman, Robert had begun to organize a state composed of diverse ethnic and civil groups: Latin and Germanic in Lombard territories and Greek in Byzantine domains. The new political structure was built on a monarchial-feudal framework characteristic of the time, but it was controlled by the energetic and uncompromising Robert, who tried to use his ducal power to create a powerful and prosperous state. The other base on which he built was Roman Catholicism, the religion of the conquerors and most of the conquered, which he used to reconcile the subjected peoples. An extremely religious man, Robert was distrustful of the Greek clergy because of their
ties with Byzantium. On the other hand, his generosity toward the Latin church was bountiful. He endowed it with territories and clerical immunities in order to tie it firmly to the feudal system. Splendid cathedrals and Benedictine abbeys were built in the hope that they would consolidate and diffuse Latin language and culture among the heterogeneous people and tie them into a new, unified

state. Robert was kept from realizing this political vision only by his death.

ASCENDENCIAS DEL SUR DE ITALIA

Por Ramón Berenguer III el Grande, conde de Barcelona (Lknea carolingia de Provenza-Barcelona, XVII) se establece el entronque ya que este monarca era hijo de Matilde de Calabria, mujer de Ramón Berenguer II Cabeza de estopa, conde de Barcelona (1076-1082), que murió asesinado por su hermano Berenguer Ramón II el Fratricida el 5 de diciembre de 1082. Matilde de Calabria, a su vez, nacida por 1061, era hija de Roberto Guiscardo y de Sigelgaita de Salerno. Roberto Guiscardo era un noble normando hijo de Tancredo, senor de Hauteville-leGuichard y de Fredesina de Normandka, hija natural del duque Ricardo II el Bueno (Vajay, Skntesis, 277). Roberto, conquistador de toda Italia, incluso de Roma, era "un campeón esforzado, de estatura colosal, anchos hombros, cabello rubio, mirada ardiente, fuerza muscular tan asombrosa como su arrojo y destreza en el manejo de las aX as; de ambición desenfrenada; de astucia, de pericia militar y de grande habilidad dwlomitica;, de caricter duro hasta la crueldad, codicioso y brutal" (Herto berg). Jefe indiscutido de las bandas normandas que merodeaban en Italia, conquistó Calabria en 1057 y al ano siguiente legitimó su posición, al reconocerse vasallo de la Santa Sede como duque de Apulia y Calabria. En el mismo 1058 casó con Sigelgaita de Salerno -nacida por 1035, muerta el 27 de marzo de 1090- por la cual se establece su descendencia con las diversas dinastkas reinantes en el sur de la penknsula (sin olvidar que Sicilia era irabe y Apulia y Calabria, bizantinas). Sigelgaita era hija de Guaimar IV, prkncipe de Salerno (10271058) y de Poppora de Tabelaria y su padre era hijo a su vez de Guaimar III (947-

1027) y de Gaitelgrima de Capua. Notes for Diego Laknez (padre de El Cid):
Diego Laknez, fue un soldado destacado que derrotó a los navarros en el campo de batalla y recuperó varios territorios que habkan sido cedidos por Fernando I a su hermano Garcka de Navarra en 1037-8: Ubierna, al norte de

Vivar, en el valle del rko del mismo nombre, Urbel y La Piedra, situados a unos pocos kilómetros hacia el noroeste. Estos hechos, dificiles de datar, pudieron haber tenido lugar hacia el final de los anos cincuenta del siglo XI.

De la madre de Rodrigo no se sabe absolutamente nada. El hecho de que el nino recibiera un nombre muy comsn en la familia materna, y no tanto en la paterna, podrka indicar que la primera era bastante mis importante que la segunda. Su abuelo materno, Rodrigo Alvarez, fue sin lugar a dudas un hombre notable. El y su hermano Nuno habkan sido desde el principio firmes partidarios de Fernando I; Rodrigo asistió a su coronación en León en 1038 y con frecuencia aparece citado en sus cartas como testigo; Nuno ocupaba en nombre del rey la importante fortaleza de Amaya, al norte de Burgos, y Rodrigo el castillo de Luna, al norte de Miranda de Ebro. Rodrigo también administraba los territorios dependientesde Mormojón, Moradillo, Cellorigo y Curiel, los tres sltimos situados en las conflictivas zonas contiguas a las marcas castellanas del sur y del este.

Parientes tan bien relacionados y tan leales a la dinastka gobernante podkan ser generosos con los miembros mis jóvenes de la familia. A los catorce anos, el futuro Cid fue puesto al servicio del hijo mayor del rey Fernando Sancho, heredero del trono de Castilla.

Notes for Berenguer Ramón I (Conde de Barcelona):
Berenguer Ramón I, llamado el Curvo (c.1006-1035), conde de Barcelona (1017-1035). Su corta edad al acceder al condado motivó que su madre, Ermesinda, ejerciera durante los primeros anos la tutela. Su etapa de gobierno fue, en general, packfica, pues coincidió con el declive del califato de Córdoba. Berenguer Ramón I fue aliado del rey taifa de Lérida, pero hostil al de Zaragoza. La actividad repobladora continuó, aunque tkmidamente, por la Segarra y las tierras altas del Gayi. Otorgó privilegios a los ciudadanos de Barcelona (1025) y estuvo presente en la dedicación del templo de Ripoll (1032). En sus sltimos anos de gobierno, los musulmanes realizaron una incursión por la zona de Calaf (1033). Asimismo, reunió en Vic (1035) una asamblea de la que salió una constitución de paz y tregua. Murió, al parecer, guerreando con el conde de Cerdana.

Notes for IV Fulk, 7Th Count Of Anjou:

Fulk IV, byname FULK THE SURLY, French FOULQUES LE RÉCHIN (b. 1043, Chateau Landon, Fr.--d. April 14, 1109, Angers), count of Anjou (1068-1109).

Geoffrey II Martel, son of Fulk III, pursued the policy of expansion begun by his father but left no sons as heirs. The countship went to his eldest nephew, Geoffrey III the Bearded. But the latter's brother, Fulk, discontented over having inherited only a few small appanages, took advantage of the general discontent aroused by Geoffrey III's inept rule, seized Saumur and Angers (1067), and cast Geoffrey first into prison at Sablé and later in the confines of Chinon castle (1068). Fulk's reign then had to endure a series of conflicts against the several barons, Philip I of France, and the duke of Normandy. He lost some lands but secured, through battle and marriage, the countship of Maine for his son, Fulk V.

Notes for William I,The Conqueror, King Of England:
William I (of England), called The Conqueror (1027-87), first Norman king of England (1066-87), who has been called one of the first modern kings and is generally regarded as one of the outstanding figures in western European history.

Born in Falaise, France, William was the illegitimate son of Robert I, duke of Normandy (died 1035), and Arletta, a tanner's daughter, and is therefore sometimes called William the Bastard. Upon the death of his father, the Norman nobles, honoring their promise to Robert, accepted William as his successor. Rebellion against the young duke broke out almost immediately, however, and his position did not become secure until 1047 when, with the aid of Henry I, king of France, he won a decisive victory over a rebel force near Caen.

During a visit in 1051 to his childless cousin, Edward the Confessor, king of England, William is said to have obtained Edward's agreement that he should succeed to the English throne. In 1053, defying a papal ban, William married Matilda of Flanders (died 1083), daughter of Baldwin V, count of Flanders (died 1067) and a descendant of King Alfred the Great, thereby strengthening his claim to the crown of England. Henry I, fearing the strong bond between Normandy and Flanders resulting from the marriage, attempted in 1054 and again in 1058 to crush the powerful duke, but on both occasions William defeated the French king's forces.

Conquest of England

About 1064, the powerful English noble, Harold, earl of Wessex, was shipwrecked on the Norman coast and taken prisoner by William. He secured his release by swearing to support William's claim to the English throne. When King Edward died, however, the witenagemot (royal council) elected Harold king. Determined to make good his claim, William secured the sanction of Pope Alexander II (died 1073) for a Norman invasion of England. The duke and his army landed at Pevensey on September 28, 1066. On October 14, the Normans defeated the English forces at the celebrated Battle of Hastings, in which Harold was slain. William then proceeded to London, crushing the resistance he encountered on the way. On Christmas Day he was crowned king of England in Westminster Abbey.

The English did not accept foreign rule without a struggle. William met the opposition, which was particularly violent in the north and west, with strong measures; he was responsible for the devastation of great areas of the country, particularly in Yorkshire, where Danish forces had arrived to aid the Saxon rebels. By 1070 the Norman conquest of England was complete.

William invaded Scotland in 1072 and forced the Scottish king Malcolm III MacDuncan (died 1093) to pay him homage. During the succeeding years the Conqueror crushed insurrections among his Norman followers, including that incited in 1075 by Ralph de Guader, 1st earl of Norfolk, and Roger Fitzwilliam, earl of Hereford, and a series of uprisings in Normandy led by his eldest son Robert (1054?-1134), who later became Robert II, duke of Normandy.

His Achievements

One feature of William's reign as king was his reorganization of the English feudal and administrative systems. He dissolved the great earldoms, which had enjoyed virtual independence under his Anglo-Saxon predecessors, and distributed the lands confiscated from the English to his trusted Norman followers. He introduced the Continental system of feudalism; by the Oath of Salisbury of 1086 all landlords swore allegiance to William, thus establishing the precedent that a vassal's loyalty to the king overrode his fealty to his immediate lord. The feudal lords were compelled to acknowledge the jurisdiction of the local courts, which William retained along with many other Anglo-Saxon institutions. The ecclesiastical and secular courts were separated, and the power of the papacy in English affairs was greatly curtailed. Another outstanding accomplishment was the economic survey undertaken and incorporated in the Domesday Book in 1086.

In 1087, during a campaign against King Philip I of France, William burned the town of Mantes (now Mantes-la-Jolie). William's horse fell in the vicinity of Mantes, fatally injuring him. He died in Rouen on September 7 and was buried at Caen in Saint Stephen's, one of the abbeys he and Matilda had founded at the time of their marriage as penance for their defiance of the pope. William was succeeded by his third-born son, William II.

Alfred, called The Great (849-99), king of the West Saxons (871-99), and one of the outstanding figures of English history. Born in Wantage in southern England, Alfred was the youngest of five sons of King Ethelwulf. On the death of

his brother Ethelred Alfred became king, coming to the throne during a Danish invasion. Although he succeeded in making peace with the Danes, they resumed their marauding expeditions five years later, and by early 878 they were successful almost everywhere. About Easter of 878, however, Alfred established himself at Athelney and began assembling an army. In the middle of that year he defeated the Danes and captured their stronghold, probably at present-day Edington. During the following 14 years Alfred was able to devote himself to the internal affairs of his kingdom. By 886 he had captured the city of London, and soon afterward he was recognized as the king of all England.
In 893 the Danes invaded England again, and the following four years were marked by warfare; eventually, the Danes were forced to withdraw from Alfred's domain. The only ruler to resist Danish invasions successfully, Alfred made his kingdom the rallying point for all Saxons, thus laying the foundation for the unification of England.
Alfred was a patron of learning and did much for the education of his people. He began a court school and invited British and foreign scholars, notably the Welsh monk Asser and the Irish-born philosopher and theologian John Scotus Erigena, to come there. Alfred translated such works as The Consolation of Philosophy by the Roman statesman and philosopher Boethius, The History of the World by the Spanish priest Paulus Orosius, and Pastoral Care by Pope Gregory I. Alfred's laws, the first promulgated in more than a century, were the first that made no distinction between the English and the Welsh peoples.

Notes for III Malcolm, King Of Scotland:
Malcolm III CANMORE (b. c. 1031--d. Nov. 13, 1093, near Alnwick, Northumberland, Eng.), king of Scotland from 1058 to 1093, founder of the dynasty that consolidated royal power in the Scottish kingdom.

The son of King Duncan I (reigned 1034-40), Malcolm lived in exile in England during part of the reign of his father's murderer, Macbeth (reigned 1040-57). Malcolm killed Macbeth in battle in 1057 and then ascended the throne. After the conquest of England by William the Conqueror, in 1066, Malcolm gave refuge to the Anglo-Saxon prince Edgar the Aetheling and his sisters, one of whom, Margaret (later St. Margaret), became his second wife.

Malcolm acknowledged the overlordship of William in 1072 but nevertheless soon violated his feudal obligations and made five raids into England. During the last of these invasions he was killed by the forces of King William II Rufus

(reigned 1087-1100). Except for a brief interval after Malcolm's death, the Scottish throne remained in his family until the death of Queen Margaret, the Maid of Norway, in 1290. Of Malcolm's six sons by Margaret, three succeeded to the throne: Edgar (reigned 1097-1107), Alexander I (1107-24), and David I (1124-53).

Notes for Margaret, Saint:
Margaret OF SCOTLAND, SAINT (b. c. 1045, probably Hungary--d. Nov. 16, 1093, Edinburgh; canonized 1250; feast day November 16, Scottish feast day June 16), queen consort of Malcolm III Canmore and patroness of Scotland.

Margaret was brought up at the Hungarian court, where her father, Edward, was in exile. After the Battle of Hastings, Edward's widow and children fled for safety to Scotland. Her brother Edgar the Aetheling, defeated claimant to the English throne, joined her there. In spite of her leanings toward a religious life, Margaret married (c. 1070) Malcolm III Canmore, king of Scotland from 1057 or 1058 to 1093. Through her influence over her husband and his court, she promoted, in conformity with the Gregorian reform, the interests of the church and of the English population conquered by the Scots in the previous century. She died shortly after her husband was slain near Alnwick, Northumberland.

Duncan II (d. 1094), king of Scotland (1093-94), son of Malcolm III and grandson of Duncan I.

For many years (1072?-87) Duncan lived as a hostage of the Norman English, allegedly as a confirmation of his father's homage to William I of England. He became king of the Scots while driving out his uncle, Donald Bane, in 1094, an enterprise in which he was helped by some English and Normans. He was killed at the instigation of Donald Bane, possibly at Monthechin, making way for the restoration of Donald Bane.

Notes for Alfonso VII Emperador (Rey de Castilla y León):
Alfonso VII, byname ALFONSO THE EMPEROR, Spanish ALFONSO EL EMPERADOR (b.1104?--d. August 1157, Fresneda, Castile), king of Leon and Castile from 1126 to 1157, son of Raymond of Burgundy and the grandson of Alfonso VI, whose imperial title he assumed. Though his reign saw the apogee of the imperial idea in medieval Spain and though he won notable victories against the Moors, he remains a somewhat hazy figure.

His childhood was complicated by the struggle between his mother Urraca and her second husband, Alfonso I of Aragon, for control of Castile and Leon. Only on Urraca's death (1126) did his stepfather finally relinquish his claims. Alfonso was then formally accepted as emperor by the kings of Aragon and Pamplona (Navarre), by the count of Barcelona, and by various Hispano-Moorish rulers. His capture of Almerka (1147) from the Moors won him renown, as did other victories, but in the end these led to little expansion of territory. Almerka was lost again in 1157 and Córdoba remained in his hands for only three years. In 1146 a new invasion of North African fanatics, the Almohads, began. Alfonso now allied himself with the Almoravids and devoted the rest of his life to a series of campaigns to check Almohad expansion in southern Spain.

Despite the importance of the imperial idea at this time, peninsular fractionalist tendencies were by no means dormant. Alfonso was unable to prevent the establishment of Portugal as an independent kingdom (1140) and, in his will, he himself divided his realm, as was the Spanish custom, between his two sons, Sancho III of Castile and Ferdinand II of Leon. This act finally destroyed the concept of empire in medieval Spain.

The rise of Castile and Aragon.

Alfonso VII subverted the idea of a Leonese empire and its implied aspiration to dominion over a unified peninsula by the division of his kingdoms between his sons; Sancho III (1157-58) received Castile and Ferdinand II (1157-88)

obtained León. While the Christians remained on the defensive in the face of Almohad power, Alfonso VIII of Castile (1158-1214) and Alfonso II of Aragon expressed their confidence in the future by concluding a treaty in 1179 apportioning the
conquest of Islamic Spain between them. Castile retained the right of reconquest to Andalusia and Murcia (Mursiyah), while Aragon claimed Valencia. Nevertheless, Alfonso VIII's efforts to dominate the other Christian rulers provoked contention and warfare and thwarted concerted effort against the Almohads. Thus, in 1195 the king of Castile suffered a disastrous defeat by the Almohads at Alarcos (Al-Arak), south of Toledo. The other Christian monarchs, acknowledging that the Almohads threatened them all, came to terms with Castile. With the collaboration of Sancho VII of Navarre (1194-1234) and Peter II of Aragon (1196-1213) and Portuguese and Leonese troops, Alfonso VIII in 1212 triumphed over the Almohads at Las Navas de Tolosa (Al-'Iqab). That extraordinary victory marked the beginning of the end of the Almohad empire and
opened the gates of Andalusia to the Christians.

While the kings of Aragon took an active role in the Reconquest, as counts of Barcelona they also had important relationships in southern France, where several lords were their vassals. When Pope Innocent III proclaimed a crusade to check the spread of the Albigensian heresy throughout that area, Peter II, though no friend of heretics, realized that his feudal rights and interests there were endangered by the arrival of northern French knights. In 1213 Peter was defeated and killed by the crusading army at Muret after he went to the aid of his brother-in-law, the count of Toulouse. In the generation after his death, Catalan ambition and power were steadily curtailed in southern France.

As the Almohad empire fell apart in the second quarter of the 13th century, the Christian rulers effected the reconquest of almost all of Spain. James I of Aragon (1213-76) for the first time utilized Catalan naval power in 1229 to conquer the kingdom of Majorca (Mayurqah), the first significant step in Catalan expansion in the Mediterranean. The subjugation of the kingdom of Valencia was more difficult, especially as James was diverted temporarily by the expectation of acquiring Navarre. When Sancho VII died without children, the people of Navarre accepted his nephew, count Theobald of Champagne (1234-53), as their king. From then on French interest in Navarre steadily increased. Forced to give up his aspirations there, James I resumed the war against the Muslims and captured Valencia in 1238. Thousands of Muslims were now brought under his rule.

Meantime, Alfonso IX of León (1188-1230) was driving southward to the Guadiana River (Wadi Ana). By capturing Mérida (Maridah) and Badajoz in 1230, he cleared the way to Seville. When he died, his son Ferdinand III, already king of Castile (1217-52) by reason of inheritance from his mother, Berenguela, a daughter of Alfonso VIII, succeeded him as king of León. Henceforth Castile and León were permanently united. Using their combined resources, Ferdinand
conquered Cordova in 1236, Murcia in 1243, Jaén (Jayyan) in 1246, and Seville in 1248. The Muslims retained only the kingdom of Granada, whose rulers

were obliged to pay an annual tribute to Castile. As a vassal kingdom, Granada by itself was not a threat, but, when supported by the Muslims of Morocco, this last outpost of Islamic power in Spain caused great difficulty for the Christians.

Notes for Manuel I Comeno (Emperador Bizantino):
Manuel I COMNENUS (b. c. 1122--d. Sept. 24, 1180), military leader, statesman, and Byzantine emperor (1143-80) whose policies failed to fulfill his dream of a restored Roman Empire, straining the resources of Byzantium at a time when the Seljuq Turks menaced the empire's survival.

The son of John II Comnenus (reigned 1118-43) and the Hungarian princess Irene, Manuel transformed the austere, conservative court of his father into a gay setting for tournaments and festivities imported from medieval western Europe.

Manuel devoted himself to affairs in the West at the beginning of his reign, practically ignoring the growing Turkish threat on the plains of Anatolia. He renewed his alliances in the West against his Norman rivals in both Sicily and Antioch. At the time of the Second Crusade he defended his Greek territory from Roger II of Sicily, whose fleet captured Corfu in 1147. With Venetian aid, the
island was retaken two years later. In 1148 Manuel consolidated his alliance with Emperor Conrad III of Germany, whose sister-in-law he had earlier married. But Conrad died in 1152, and, despite repeated attempts, Manuel could not reach an agreement with his successor, Frederick I Barbarossa. When Roger II died in 1154, Manuel sent a fleet to attack Ancona (1155), capturing much of the region of Apulia. He was defeated in 1156 at Brindisi by a joint force of Germans,
Venetians, and Normans, ending Byzantine influence in Italy.

Manuel next asserted his authority over the crusader states, established after the First Crusade. He campaigned in Cilicia (in modern Turkey) in 1158,

regaining lost territory and forcing Renaud of Chatillon, prince of Antioch, and Baldwin III, king of Jerusalem, to recognize Byzantine suzerainty (1159).

Manuel was also successful in his dealings with the Serbs and Hungarians. In 1167 Dalmatia, Croatia, and Bosnia were incorporated into the empire. Interfering in Hungarian dynastic struggles, he was rewarded when his candidate, Béla, was elected king in 1173. Elsewhere in the north his relations were not as successful. Relations between Venice and Constantinople were broken off for 10 years from 1171.

Manuel's activities elsewhere diverted his attention from the Turkish East. Although he had launched campaigns against the Sultan of Iconium in 1145, 1146, and 1160, there were no practical results. By the time he led a large-scale attack against the Turks in 1176, Manuel's dream of a restored Roman Empire had impaired his ability to measure the growth of Seljuq power. His defeat at Myriocephalon pointed toward the collapse of the Byzantine Empire.

BRITANICA

Manuel I Comnenus (circa 1120-80), Byzantine emperor (1143-80). The son of Emperor John II, Manuel tried unsuccessfully to restore Byzantine power in Italy. In 1146 he married Irene, a sister-in-law of the German king Conrad III, and the following year cooperated with Conrad and the other leaders of the unsuccessful Second Crusade. In alliance with Venice, he fought a war against Roger II of Sicily in 1147-49. In 1155 he invaded the Sicilian Kingdom, but was defeated by Roger's successor, William I, and withdrew his army in 1158. After the death of his friend Conrad III, he supported the north Italian cities and Pope Alexander III against Conrad's successor, Frederick I (Frederick Barbarossa). Manuel's relations with Venice deteriorated in the 1160s, and in 1171 he revoked the trading privileges of Venetian merchants in the Byzantine Empire, confiscating all their property. From 1174 to 1176 he was at war with Kilij Arslan II, the Seljuk sultan of Rum, who defeated him at Myriocephalon, near present-day Denizli, Turkey, in 1176. Manuel was succeeded by Alexius II Comnenus, his son by his second wife.

Louis VI, called The Fat (1081-1137), king of France (1108-37), son and successor of Philip I; he was married to Adelaide of Savoy. Almost his entire reign was spent in subduing the robber barons, who preyed on the environs of Paris but were finally forced to yield to royal authority. For some 20 years during the period from 1109-1135, Louis waged war against Henry I, the Norman king of England, and against Henry's son-in-law, Holy Roman Emperor Henry V; he successfully repelled an invasion by Henry V in 1124. Louis greatly strengthed the royal power in France, granted benefactions to the church and privileges to towns, and became known as the protector of the peasants and as a fearless military leader. He was succeeded on the throne by his son Louis VII.

   Notes for Luis VII El Jóven (Rey de Francia):
   Louis VII, byname LOUIS THE YOUNGER, French LOUIS LE JEUNE (b. c. 1120--d. Sept. 18, 1180, Paris), Capetian king of France who pursued a long rivalry, marked by recurrent warfare and continuous intrigue, with Henry II of England.

   In 1131 Louis was anointed as successor to his father, Louis VI, and in 1137 he became the sole ruler at his father's death. Louis married Eleanor, daughter of William X, duke of Aquitaine, in 1137, a few days before his effective rule began, and he thus temporarily extended the Capetian lands to the Pyrenees. Louis continued his father's pacification program by building the prestige of the kingship through an administrative government based on trustworthy men of humble origin and by consolidating his rule over his royal domains rather than by adding new acquisitions. From 1141 to 1143 he was involved in a fruitless conflict with Count Thibaut of Champagne and the papacy. But thereafter his relations with the popes were good; Alexander II, whom he supported against Frederick Barbarossa, took refuge in

France. But the major threat to his reign came from Geoffrey, count of Anjou and, briefly, of Normandy, and Geoffrey's son Henry, who later (1154) became King Henry II of England as well as ruler of both Anjou and Normandy. After Louis repudiated his wife Eleanor for misconduct on March 21, 1152, she married Henry, who then took over control of Aquitaine. Ironically, this act was probably to Capetian advantage because Aquitaine might have drained the resources of Louis's kingdom while bringing him little revenue. After the death of Louis's second wife, he married Alix of Champagne, whose
Carolingian blood brought added prestige to the monarchy (1160); their son became Philip II Augustus.

Louis might have defeated Henry if he had made concerted attacks rather than weak assaults on Normandy in 1152. Anglo-Norman family disputes saved Louis's kingdom from severe incursions during the many conflicts that Louis had with Henry between 1152 and 1174. Louis was helped by the quarrel (1164-70) between Henry and Thomas Becket, archbishop of Canterbury, and a revolt (1173-74) of Henry's sons. Suger, abbot of Saint-Denis, who acted as regent in
1147-49 while Louis was away on the Second Crusade, is the primary historian for Louis's reign.

Ramon Berenguer III, byname RAMON BERENGUER THE GREAT, Catalan RAMON BERENGUER EL GRAN (b. 1082--d. 1131, Barcelona [Spain]), count of Barcelona during whose reign, (1097-1131) independent Catalonia reached the summit of its historical greatness, spreading its ships over the western Mediterranean and acquiring new lands from the southern Pyrennees to Provence. He was also known as Ramon Berenguer I of Provence.

The Cid's daughter, Marka Sol, married Ramón Berenguer III.

The son of Ramon Berenguer II, he took the throne on the departure of his uncle, Berenguer Ramon II, on crusade and spent his early years fighting off Almoravid Muslims, whose armies approached the very walls of Barcelona. Thereafter, his expansionist campaigns began. In 1111 he conquered the county of Besals and, by his marriage to Douce (or Dolea) of Provence in 1112, acquired the county of Provence. In the years 1114-15 he undertook, with the Pisans, a joint expedition against the Balearic Islands, liberating thousands of Christian slaves and destroying the Moors' piratical bases. Commerce thereafter flourished between Barcelona, Marseille, Genoa, and Pisa. The following year (1116) he sailed to Rome in an attempt to gain aid from the Italian states and to acquire a license from the Pope for his crusade in Spain, but the visit was largely unsuccessful. In 1117 he inherited the old county of Cerdana in the Pyrenees.

On his death, Provence went to his younger son, Berenguer Ramon (as Berenguer Ramon I of Provence, reigning 1131-44); and the rest of the lands, the most important ones, went to the elderson, Ramon Berenguer IV.

Notes for Roger (Ruggiero) II Rey de Sicilia:
Roger II (b. Dec. 22, 1095--d. Feb. 26, 1154, Palermo [Sicily]), grand count of Sicily (1105-30) and king of the Norman Kingdom of Sicily (1130-54). He also incorporated the mainland territories of Calabria in 1122 and Apulia in 1127.

Early life.

Roger was the son of Count Roger I of Sicily and his third wife, Adelaide of Savona. He succeeded his elder brother Simon on Sept. 28, 1105, at the age of nine. Little is known of his childhood. These years, during which his mother acted as regent, he probably spent between Mileto in Calabria, the family castle in northeastern Sicily, and Messina; but it was at Palermo in 1112 that he was knighted and assumed the reins of government, and there his Sicilian capital was henceforth established.

Though the island that Roger I and his brother Robert Guiscard had conquered was populated predominantly by Arabs--with a strong admixture of Greeks--Roger I had always remained essentially a Norman knight. His son, by contrast, was a man of the Mediterranean. Deprived of paternal influence from the age of five, Roger was brought up in a cosmopolitan, multilingual world of Greek and Muslim tutors and secretaries and soon revealed an exotic strain in his nature. The latter was obvious enough in his complexion and in the darkness of his eyes and hair,
but his contemporaries soon learned to their cost that he was not only a southerner--he was also an Oriental. He was a ruler for whom diplomacy, however tortuous, was a more natural weapon than the sword, and gold, however corrupting, a more effective currency than blood.

Two qualities, however, he had inherited from his Norman forebears: his energy and his ambition. It was these, combined with a gift for imaginative statesmanship all his own, that enabled him to profit from the fecklessness of his cousins--the son and grandson of Robert Guiscard--and to acquire, in return for military aid against a rebellious baronage, more and more of their mainland territories. By 1122 all Calabria was his, and in 1127, when Duke William of Apulia died without issue, Roger laid claim to the duchy as his rightful heir. Opposition was considerable; the barons had always resented the domination of the Hautevilles, whom they looked upon as upstarts no better than themselves, and the papacy had no wish to see too powerful a state established on its southern frontier. But they were no match for Roger's particular technique of armed diplomacy, and in 1128 Pope Honorius II invested Roger as duke of Apulia, Calabria, and Sicily.

Thus, at 32, the young duke found himself one of the most influential princes in Europe. Only one thing more was necessary before he could weld his triple duchy into a single nation and treat with his fellow rulers on equal terms: a royal crown. Two years later he secured it. Honorius' death early in 1130 led to a dispute over the papal succession. One of the two candidates, Innocent II, thanks to the energetic advocacy of St. Bernard of Clairvaux, soon had almost the whole continent behind him. His rival, the antipope Anacletus II, turned to Roger, who promised full support in return for coronation.

Enthronement as king of Sicily.

The first king of Sicily was crowned on Christmas Day 1130 in the cathedral at Palermo. The antipope Anacletus died in 1138 and in the following year, after routing a papal army at Galluccio and taking the Pope captive, Roger forced Innocent to confirm him in the Kingdom of Sicily, with the overlordship of all Italy south of the Garigliano River. After this he was quickly able to pacify his mainland realm, where his vassals--abetted by the German emperor Lothair II who led a large, though unsuccessful, expedition to South Italy in 1136-37--had kept up an almost permanent insurrection. In Sicily itself, where the ban on large fiefs had left little opposition to Roger's rule, the new kingdom steadily grew more prosperous.

The King himself, more than any other ruler of his day, was an intellectual who had thought deeply about the science of government, and although he cherished no love for the empire of the East--which, like that of the West, maintained its claim to its former South Italian possessions--his whole upbringing inclined him toward the Byzantine concept of monarchy: a mystically tinged absolutism in which the sovereign, as God's viceroy, lived remote and elevated from his subjects in a magnificence that reflected his intermediate position between Earth and heaven. It is no coincidence that in one of the only two portraits of Roger with any claim to authenticity--the mosaic in the Church of the Martorana at Palermo--he is depicted in Byzantine robes being symbolically crowned
by Christ.

But splendour did not mean empty extravagance. A contemporary chronicler notes that Roger would personally go through his exchequer accounts, recording even the smallest expenditure, and that he was as scrupulous in the payment of debts as in their collection. Still less did it mean idleness. In the words of his court geographer, the King "accomplished more in his sleep than others did in
their waking day." Building on the foundations his father had laid, he created a civil service, based eclectically on Norman, Greek, and Arabic models, that was the wonder and envy of Europe. He entrusted finance to his Arab subjects, who also supplied him with the spearhead of his army. The navy, by contrast, was predominantly Greek; its chief, known by the Arabic title emir of emirs--from which the word admiral derives--served also as head of the government, ranking second after the king himself.

Roger's navy.

It was on this navy above all that Sicily's security and prosperity depended, and Roger's use of it was not overscrupulous. Under the greatest of its admirals, George of Antioch, it subdued much of what is now Tunisia to form a profitable, if short-lived, North African empire; it captured Corfu; it harassed the Greek coast, abducting the best of the Theban silk workers to found the court workshop at Palermo; and in 1149 it sailed up the Bosporus to fire a few impudent arrows into the gardens of the imperial palace. Significantly, however, it played no part in the Second Crusade of 1147. Roger had hated the Frankish rulers of Jerusalem ever since his mother's disastrous remarriage to King

Baldwin I of Jerusalem 34 years earlier. Besides, most of his Sicilian subjects were Muslims, and toleration was the cornerstone of his kingdom.

This policy even showed itself in his church buildings. Roger's first great building, the cathedral at Cefall, shows little Saracenic influence, but the Palatine Chapel in Palermo, conceived on a Latin plan and aglow with Byzantine mosaics, is topped by a stalactite roof of pure Arab workmanship. Oriental inspiration is equally evident in the five vermilion cupolas of the church of S. Giovanni degli Eremiti, built in 1142 for the Benedictines.

The Assizes of Ariano

After the pacification of South Italy, the King promulgated in 1140 at the so-called Assizes of Ariano a corpus of law covering every aspect of his rule. He then returned to Palermo, which he seldom left again. There he spent his last 15 years in the most intellectual court of Europe, surrounded by the leading thinkers of the time. Sicily was already the only land where scholars could study both Greek and Arabic--then the scientific language par excellence. Through Roger's
enthusiasm, Sicily became a cultural clearinghouse where, for the first time, Western and Oriental scholars could meet on an equal footing.

Roger II was married three times. He outlived his first wife, Elvira, daughter of Alfonso VI of Castile, and his second, Sibyl of Burgundy. His third wife, Beatrice of Rethel, whom he married in his last year, bore him a daughter, Constance, after his death. Constance married the future emperor Henry VI, bringing Sicily under the control of the Hohenstaufens. Upon his death at age 58, Roger was succeeded by his fourth but oldest surviving son, William. Despite his repeatedly expressed wish to rest in Cefall, the King was buried in the cathedral at Palermo, having created, in a Europe rent by schism and exhausted by the Crusades, not just a kingdom but a political and religious climate in which all races, creeds, and cultures were equally encouraged and equally favoured.

Notes for Enrique IV (Emperador Romano Germinico):

Henry IV (Holy Roman Empire) (1050-1106), Holy Roman emperor (1056-1106). He was the son of Emperor Henry III.

Born in Goslar, Germany, on November 11, 1050, Henry succeeded his father at the age of six, but during most of his minority, his mother ruled in his name. After Henry came of age in 1065 he crushed a rebellion in Saxony. About that time there began the struggle between pope and emperor for temporal power in the empire. Despite a papal decree prohibiting appointment of church officials by the emperor, Henry appointed (1075) prelates in various parts of Italy. On being reprimanded by Pope Gregory VII, Henry convoked (1076) a German council at Worms to depose the pope. This act resulted in the excommunication of the emperor, with the consequent release of his subjects from allegiance to him. The nobles formed a coalition, threatening not to recognize Henry unless he secured absolution by February 1077. By dressing as a penitent and standing barefoot in the snow for three days outside the castle of Canossa, where Pope Gregory was staying, Henry obtained readmission to the communion of the church.

The German nobles, however, elected Rudolf, duke of Swabia (fl. 1057-80), to replace Henry. This election caused a civil war. In 1080 the pope recognized the kingship of Rudolf and again excommunicated Henry, who declared Pope Gregory deposed and had the Italian archbishop Guibert of Ravenna (c. 1025-1100) elected in his stead as Pope Clement III. Rudolf was killed in 1080, and Henry regained control of Germany. He then led his forces into Italy and captured (1084) Rome, where he was crowned emperor by Clement III. A Norman army, led by Robert Guiscard, came to the aid of Pope Gregory, however, and drove Henry from Rome. Henry returned to Germany and there participated in a long series of civil wars, in which his sons eventually turned against him. In 1105 he was taken prisoner by his son Henry, later Emperor Henry V, and forced to abdicate. Escaping in the next year, Henry IV solicited aid from various sources, including England, Denmark, and France. He died at Licge, Belgium, on August 7, 1106, while gathering an army.

Notes for Alexius I Comeno (Emperador Bizantino):
Alexius I, Comneno. 1048- 1118. Emperador bizantino que reinó de 1081 a 1118. defendió las fronteras imperiales contra los escitas. normandos y turcos. Fue invadido durante la primera Cruzada de 1096 a 1099. Se le reconoció gran talento militar.

Alexius I COMNENUS (b. 1048, Constantinople [now Istanbul, Tur.]--d. Aug. 15, 1118), Byzantine emperor (1081-1118) at the time of the First Crusade, who founded the Comnenian dynasty and partially restored the strength of the empire after its defeats by the Normans and Turks in the 11th century.

The third son of John Comnenus and a nephew of Isaac I (emperor 1057-59), Alexius came of a distinguished Byzantine landed family and was one of the military magnates who had long urged more effective defense measures, particularly against the Turks' encroaching on Byzantine provinces in eastern and central Anatolia. From 1068 to 1081 he gave able military service during the short reigns of Romanus IV, Michael VII, and Nicephorus III. Then, with the support of his brother Isaac and his mother, the formidable Anna Dalassena, and with that of the powerful Ducas family, to which his wife, Irene, belonged, he seized the Byzantine throne from Nicephorus III.

Alexius was crowned on April 4, 1081. After more than 50 years of ineffective or short-lived rulers, Alexius, in the words of Anna Comnena, his daughter and biographer, found the empire "at its last gasp," but his military ability and diplomatic gifts enabled him to retrieve the situation. He drove back the south Italian Normans, headed by Robert Guiscard, who were invading western Greece (1081-82). This victory was achieved with Venetian naval help, bought at the cost of granting Venice extensive trading privileges in the Byzantine Empire. In 1091 he defeated the Pechenegs, Turkic nomads who had been continually surging over the Danube River into the Balkans. Alexius halted the further encroachment of the Seljuq Turks, who had already established the Sultanate of Rum (or Konya) in central Anatolia. He made agreements with Sulayman ibn Qutalmlsh of Konya (1081) and subsequently with his son Qlllch Arslan (1093), as well as with other Muslim rulers on Byzantium's eastern border.

At home, Alexius' policy of strengthening the central authority and building up professional military and naval forces resulted in increased Byzantine strength in western and southern Anatolia and eastern Mediterranean waters. But he was unable or unwilling to limit the considerable powers of the landed magnates who had threatened the unity of the empire in the past. Indeed, he strengthened their position by further concessions, and he had to reward services, military and otherwise, by granting fiscal rights over specified areas. This method, which was to be increasingly employed by his successors, inevitably weakened central revenues and imperial authority. He repressed heresy and maintained

the traditional imperial role of protecting the Eastern Orthodox church, but he did not hesitate to seize ecclesiastical treasure when in financial need. He was subsequently called to account for this by the church.

To later generations Alexius appeared as the ruler who pulled the empire together at a crucial time, thus enabling it to survive until 1204, and in part until 1453, but modern scholars tend to regard him, together with his successors John II (reigned 1118-43) and Manuel I (reigned 1143-80), as effecting only stopgap measures. But judgments of Alexius must be tempered by allowing for the extent to which he was handicapped by the inherited internal weaknesses of the Byzantine state and, even more, by the series of crises precipitated by the western European crusaders from 1097 onward. The crusading movement, motivated partly by a desire to recapture the holy city of Jerusalem, partly by the hope of acquiring new territory, increasingly encroached on Byzantine preserves and frustrated Alexius' foreign policy, which was primarily directed toward the reestablishment of imperial authority in Anatolia. His relations with Muslim powers were disrupted on occasion and former valued Byzantine possessions, such as Antioch, passed into the hands of arrogant Western princelings, who even introduced Latin Christianity in place of Greek. Thus, it was during Alexius' reign that the last phase of the clash between the Latin West and the Greek East was inaugurated. He did regain some control over western Anatolia; he also advanced into the southeast Taurus region, securing much of the fertile coastal plain around Adana and Tarsus, as well as penetrating farther south along the Syrian coast. But neither Alexius nor succeeding Comnenian emperors were able to establish permanent control over the Latin crusader principalities. Nor was the Byzantine Empire immune from further Norman attacks on its western islands and provinces--as in 1107-08, when Alexius successfully repulsed Bohemond I of Antioch's assault on Avlona in western Greece. Continual Latin (particularly Norman) attacks, constant thrusts from Muslim principalities, the rising power of Hungary and the Balkan principalities--all conspired to surround Byzantium with potentially hostile forces. Even Alexius' diplomacy, whatever its apparent success, could not avert the continual erosion that ultimately led to the Ottoman conquest.

Alexius I Comnenus (1048-1118), Byzantine emperor (1081-1118). Coming to the throne at a time when the Byzantine Empire was threatened by foreign enemies on every side, Alexius began his reign by combining with the Venetians to resist Norman invaders led by Robert Guiscard in Greece. In 1091 he defeated the Pechenegs, a Turkic tribe raiding the empire from the north; in the same year he stabilized the situation in the east by concluding a treaty with the Seljuk Turks. In 1095 Alexius appealed to Pope Urban II for help in

recovering Anatolia from the Seljuks, thus helping to inspire the First Crusade. He exacted an oath of allegiance from the Crusade's leaders (among them, Bohemond, the son of his old enemy Robert Guiscard) when they arrived in Constantinople (present-day Istanbul) the following year. With their help, he regained control of western Anatolia, but he failed to prevent them from establishing independent states in Syria and Palestine. A dispute with Bohemond over the lordship of Antioch ended when the Norman acknowledged Alexius as his overlord in 1108. Alexius's biography, the Alexiad, was written by his daughter, Anna Comnena. It is considered a valuable source of historical information.

Notes for Irene Ducas:
Irene, in full IRENE DUCAS (b. c. 1066--d. 1120, Constantinople), wife of the Byzantine emperor Alexius I Comnenus, known from the description of her in the Alexiad of their daughter Anna Comnena.

When Alexius became emperor in April 1081 he reportedly planned to repudiate Irene and wed Mary, who had been married to the former emperors Michael VII Ducas and Nicephorus III Botaneiates. It was probably fortunate for Alexius that his plan was foiled, for his repudiation of his wife would have incurred the enmity of the powerful Ducas family. Irene was crowned on April 11, 1081, seven days after her husband.

In violation of the rights of John, the eldest son of Alexius and Irene, the Empress supported the attempts of her daughter Anna to secure the throne for her second husband, Nicephorus Bryennius. Shortly before his death, the Emperor, aware of the intrigues of his wife and daughter, ordered John to proclaim himself emperor. John had himself crowned in the church of Hagia Sophia and then, with his supporters, occupied the heavily fortified Sacred Palace. Alexius died in August 1118, and Irene, frustrated in her attempts to deprive John of the throne, retired to a monastery that she had previously founded in Constantinople.

John II COMNENUS (b. 1088--d. April 8, 1143), Byzantine emperor (1118-43) whose reign was characterized by unremitting attempts to reconquer all important Byzantine territory lost to the Arabs, Turks, and Christian crusaders.

A son of Emperor Alexius I Comnenus and Irene Ducas, John kept an austere court and spent most of his reign with his troops. He sought to strengthen Byzantine finances by ending Venetian trading privileges in the empire, but was forced to restore them after an unsuccessful war (1122). He thwarted Pecheneg, Hungarian, and Serbian threats during the 1120s, and in 1130 allied himself with
the German emperor Lothair II (III) against the Norman king Roger II of Sicily.

In the later part of his reign John focussed his activities on the East. In 1135 he defeated the Danismend emirate of Melitene. Two years later he reconquered all of Cilicia from the kingdom of Lower Armenia and later forced Raymond of Poitiers, prince of Antioch, to recognize Byzantine suzerainty. Though John and Raymond formed an alliance against the Turkish Atabegs of Syria, their campaigns were not particularly successful. In 1143 John returned to press his claims to Antioch. He died following a hunting accident after naming his fourth son, Manuel I, to succeed him.

i. Manuel I Comeno (Emperador Bizantino), born Abt. 1120; died 24 Septiembre 1180; married Irene de Hungría (Emperatriz Bizantina); born Abt. 1125.

Notes for Manuel I Comeno (Emperador Bizantino):
Manuel I COMNENUS (b. c. 1122--d. Sept. 24, 1180), military leader, statesman, and Byzantine emperor (1143-80) whose policies failed to fulfill his dream of a restored Roman Empire, straining the resources of Byzantium at a time when the Seljuq Turks menaced the empire's survival.

The son of John II Comnenus (reigned 1118-43) and the Hungarian princess Irene, Manuel transformed the austere, conservative court of his father into a gay setting for tournaments and festivities imported from medieval western Europe.

Manuel devoted himself to affairs in the West at the beginning of his reign, practically ignoring the growing Turkish threat on the plains of Anatolia. He renewed his alliances in the West against his Norman rivals in both Sicily and Antioch. At the time of the Second Crusade he defended his Greek territory from Roger II of Sicily, whose fleet captured Corfu in 1147. With Venetian aid, the island was retaken two years later. In 1148 Manuel consolidated his alliance with Emperor Conrad III of Germany, whose sister-in-law he had earlier married. But Conrad died in 1152, and, despite repeated attempts, Manuel could not reach an agreement with his successor, Frederick I Barbarossa. When Roger II died in 1154, Manuel sent a fleet to attack Ancona (1155), capturing much of the region of Apulia. He was defeated in 1156 at Brindisi by a joint force of Germans,
Venetians, and Normans, ending Byzantine influence in Italy.

Manuel next asserted his authority over the crusader states, established after the First Crusade. He campaigned in Cilicia (in modern Turkey) in 1158, regaining lost territory and forcing Renaud of Châtîllon, prince of Antioch, and Baldwin III, king of Jerusalem, to recognize Byzantine suzerainty (1159).

Manuel was also successful in his dealings with the Serbs and Hungarians. In 1167 Dalmatia, Croatia, and Bosnia were incorporated into the empire. Interfering in Hungarian dynastic struggles, he was rewarded when his candidate, Béla, was elected king in 1173. Elsewhere in the north his relations were not as successful. Relations between Venice and Constantinople were broken off for 10 years from 1171.

Manuel's activities elsewhere diverted his attention from the Turkish East. Although he had launched campaigns against the Sultan of Iconium in 1145, 1146, and 1160, there were no practical results. By the time he led a large-scale attack against

the Turks in 1176, Manuel's dream of a restored Roman Empire had impaired his ability to measure the growth of Seljuq power. His defeat
at Myriocephalon pointed toward the collapse of the Byzantine Empire.

BRITANICA

Manuel I Comnenus (circa 1120-80), Byzantine emperor (1143-80). The son of Emperor John II, Manuel tried unsuccessfully to restore Byzantine power in Italy. In 1146 he married Irene, a sister-in-law of the German king Conrad III, and the following year cooperated with Conrad and the other leaders of the unsuccessful Second Crusade. In alliance with Venice, he fought a war against Roger II of Sicily in 1147-49. In 1155 he invaded the Sicilian Kingdom, but was defeated by Roger's successor, William I, and withdrew his army in 1158. After the death of his friend Conrad III, he supported the north Italian cities and Pope Alexander III against Conrad's successor, Frederick I (Frederick Barbarossa). Manuel's relations with Venice deteriorated in the 1160s, and in 1171 he revoked the trading privileges of Venetian merchants in the Byzantine Empire, confiscating all their property. From 1174 to 1176 he was at war with Kilij Arslan II, the Seljuk sultan of Rum, who defeated him at Myriocephalon, near present-day Denizli, Turkey, in 1176. Manuel was succeeded by Alexius II Comnenus, his son by his second wife.

Notes for Felipe II Augusto (Rey de Francia):

Philip II (of France) (1165-1223), king of France (1180-1223), one of the most powerful European monarchs of the Middle Ages. His full name was Philip Augustus.

The son of King Louis VII, Philip was born on August 21, 1165, in Gonesse, near Paris. He became coregent with his father in 1179. From 1181 to 1186 Philip combated a coalition of barons in Flanders, Burgundy, and Champagne and at their expense increased the royal domain. Philip allied himself with Richard, duke of Aquitaine, who in 1189 became Richard I of England, and in 1190 the two kings embarked on the Third Crusade. The kings quarreled, however, and Philip returned to France in 1191. Allied with Holy Roman Emperor Henry VI and Richard's brother, John, later king of England, Philip attacked Richard's territories in France. Richard returned in 1194 and went to war against Philip. By the time of Richard's death in 1199, Philip had been forced to surrender most of the territory he had annexed. Philip subsequently warred against John, who became king of England in 1199; between 1202 and 1205 Philip more than doubled his territory by annexing Normandy, Maine, Brittany, Anjou, Touraine, and Poitou.

A coalition of European powers, including England, challenged the growing power of France in 1214. Philip's forces, however, decisively defeated the coalition at the Battle of Bouvines, establishing France as a leading country of Europe.

Philip increased the royal power not only by extending the royal domain but also by reducing the power of the feudal lords. He replaced the noble officers at court with an advisory council appointed from the middle class and supported the communes against the nobles. France prospered from his judicial, financial, and administrative reorganization of the government; serfdom declined, towns grew, and commerce flourished. Philip established Paris as the fixed capital of France, paved the streets, and had many new buildings constructed in the city.

**1311707. Anna Angelus (Emperatriz Bizantina),** born Abt. 1200. She was the daughter of **2623414. Alexius III Angelus (Emperador Bizantino)**.

Notes for Teodoro I Lascaris (Emperador Bizantino):

Theodore I LASCARIS, Lascaris also spelled LASKARIS (b. c. 1174--d. November 1221, Nicaea), first emperor of Nicaea, which was recognized as the Byzantine government-in-exile and as the legitimate successor of the Byzantine Empire during the crusaders' occupation of Constantinople.

A son-in-law of the Byzantine emperor Alexius III Angelus, Theodore distinguished himself during the sieges of Constantinople by the Latins in the Fourth Crusade (1203-04). After the Byzantine capital fell, he gathered a band of refugees, first at Brusa and then at Nicaea (modern Iznik), across the Bosporus in Asia Minor, and formed a new Byzantine state. In 1208 he assumed the title of emperor and defended his infant empire not only against the crusaders but also against David Comnenus, a rival Greek emperor in Trebizond to the east on the Black Sea, and against the Seljuq Turks. When the Seljuq sultan of Rum, Kay-Khusraw, who had given asylum to the emperor Alexius, failed to persuade Theodore to abdicate, he invaded Theodore's territory in the spring of 1211. Theodore, however, defeated and killed Kay-Khusraw in battle and also captured
and imprisoned Alexius.

After a period of warfare with Henry of Flanders, Latin emperor of Constantinople, Theodore signed a treaty (c. 1214) defining the frontiers between the Greek empire of Nicaea and the Latin empire of Constantinople. Theodore then annexed much of the territory of Trebizond. After Henry's death (1216), Theodore strengthened his ties to the Latin empire by taking as his third wife Maria, daughter of the empress Yolande, and also by proposing (1219) that Greek and Latin clergy meet in Nicaea to consider the reunion of the two churches.

In August 1219, Theodore made a lucrative commercial agreement with the Venetians in Constantinople. In 1222, shortly before his death, he negotiated a settlement with Yolande's son and successor as Latin emperor, Robert of Courtenay, to whom he betrothed his daughter Eudocia. On his death Theodore was succeeded as emperor of Nicaea by his son-in-law John III Vatatzes.

i. Teodoro II Lascaris (Emperador Bizantino), born 1222; died Agosto 1258.

Notes for Teodoro II Lascaris (Emperador Bizantino):

Theodore II LASCARIS (b. 1222--d. August 1258), Byzantine emperor of Nicaea who--though not as capable as his grandfather or his father, Theodore I and John III Vatatzes, respectively--was an able ruler, a good soldier, and a man of letters; he succeeded in holding together the prosperous state east of Constantinople bequeathed to him by his father.

Theodore II, who had already been crowned as co-emperor, became sole ruler on the death of his father in November 1254. At the outset of his reign he renewed the alliance with the Seljuq Sultanate of Rum (in modern Turkey). Early in 1255, however, the Bulgar tsar Michael II Asen invaded Thrace and Macedonia. After two victorious campaigns against the Bulgars (1255-56), Theodore compelled them to sign a treaty (May 1256).

In October 1256, Theodore's daughter Maria was married to Nicephorus, son of Michael, the despot of Epirus. As a condition of the marriage, however, Theodore demanded the towns of Dyrrachium (now Durrës, Alb.) and Servia (in Greece). Michael was enraged at this demand, and war broke out; it was still being waged at the time of Theodore's death.

ENCICLOPEDIA ESPASA

Ordono III (fallecido en el 956), rey de León (951-956). Hijo y sucesor de Ramiro II (931-951), se enfrentó a navarros y castellanos que apoyaban a su hermanastro Sancho, en su intento por acceder al trono leonés (953). Su gobierno estuvo presidido por los conflictos en la sucesión al trono, las rebeldkas internas, los ataques procedentes de al-Andalus y una sublevación en Galicia. En respuesta a las incursiones musulmanas, Ordono III envió una gran expedición que llegó hasta Lisboa (955). Después de esta demostración de fuerza se iniciaron las negociaciones para firmar la paz con el califa Abd al-Rahman III (912-961). En el interior, el rey leonés llevó a cabo una cuidada reorganización del territorio y continuó con la obra, ya iniciada por su padre, de fortalecimiento de las instituciones del reino.

Agnes OF POITOU, also called AGNES OF AQUITAINE, French AGNÈS DE POITOU, or AGNÈS D'AQUITAINE (b. c. 1024--d. Dec. 14, 1077, Rome [Italy]), second wife of the Holy Roman emperor Henry III. She was regent (1056-62) during the minority of her son, the future Henry IV.

Agnes was a daughter of William V the Great, duke of Aquitaine, and was a descendant of the kings of Burgundy and Italy. She married Henry III on Nov. 1, 1043, forming an alliance designed to cement the empire's relations with its neighbouring states to the

west. On Henry's death she assumed the regency for her son until it was wrested from her by Archbishop Anno of Cologne in 1062. Agnes then retired to a convent.

BRITANICA

Notes for Enrique III (Emperador Romano Germánico):
Henry III (b. Oct. 28, 1017--d. Oct. 5, 1056, Pfalz Bodfeld, near Goslar, Saxony), duke of Bavaria (as Henry VI, 1027-41), duke of Swabia (as Henry I, 1038-45), German king (from 1039), and Holy Roman emperor (1046-56), member of the Salian dynasty. He was a powerful advocate of the Cluniac reform movement that sought to purify the Western Church in the 11th century, the last emperor able to dominate the papacy.

Youth and marriage.

Henry was the son of the emperor Conrad II and Gisela of Swabia. He was more
thoroughly trained for his office than almost any other crown prince before or after. With the Emperor's approval, Gisela had taken charge of his upbringing, and she saw to it that he was educated by a number of tutors and acquired an interest in literature.

In 1036 Henry married Gunhilda (Kunigunde), the young daughter of King Canute of England, Denmark, and Sweden. Because her father had died shortly before, the union with this frail and ailing girl brought with it no political advantages. She died in 1038, and the emperor Conrad died the following year.

His 22-year-old successor as German king resembled him in appearance. From his mother Henry inherited much, especially her strong inclination to piety and church services. His accession to the throne, unlike that of his two predecessors, did not lead to civic unrest, but his reign was burdensome from the beginning. Probably over questions of principle, the self-willed emperor quarrelled with the aging Gisela during her last years.

He devoted his energies above all to the contemporary movement to bring an end to war among Christian princes, although his own policies were not always pacific. In possession of the duchies of Franconia, Bavaria, Swabia, and Carinthia, he had attempted to carry on his father's policy of supremacy in the east and, in fact, attained sovereignty over Bohemia and Moravia.

It may have been at this time that Henry, prematurely believing he had reached the zenith of his power, displayed openly, as if it were a matter of governmental policy, his leanings toward the

clerical-reform party. Intending to re-create a theocratic age like that of Charlemagne, he failed to realize that this could be done only as long as the papacy was powerless.

Still a childless widower, he married Agnes, the daughter of William V of Aquitaine and Poitou, in 1043. The match must have been intended primarily to cement peace in the west and to assure imperial sovereignty over Burgundy and Italy, and Agnes' total devotion to the church reform advocated by the Cluniac monasteries probably confirmed Henry in his decision to take her for his
wife. In November 1050 she bore him a son, who later became the emperor Henry IV. There followed another boy, Conrad, and three daughters. What Henry still lacked was the highest honour--his coronation as emperor at the hands of the pope.

Control of the papacy.

When Henry reached Rome in 1046, three rivals were claiming the papacy. Henry wanted a pacified Italy, in which German supremacy was uncontested, and he wanted to receive the imperial crown from unsullied hands. He convoked a synod at Sutri, which, at his bidding, elected as the new pope a German, Suidger, bishop of Bamberg, who was inaugurated as Clement II. On the same day
the new pope crowned the imperial couple.

Rome became an imperial city, and the control over the church--i.e., the decisive vote in future conclaves--passed into the hands of the German king. In succeeding years Henry made use of this right to appoint a pope three more times. When the Normans were beginning their conquest of Calabria, Henry did not intervene to any extent in southern Italy; instead he left this problem to Pope
Leo IX, who was defeated by the Normans.

Believing that the basis of his power was secure, the Emperor expected to be as successful with his internal projects as he had been in foreign affairs; but this was not to be the case. He could not carry out his ecclesiastical reforms in Germany or its neighbouring territories because he was virtually without friends among the clergy. He was increasingly opposed by the Scandinavian Church and by that of the Saxons. Also, he had to contend during most of his reign with Godfrey II, duke of Upper Lorraine, whom he repeatedly pardoned instead of disciplining.

There was unrest everywhere. In 1054-55, dukes Conrad of Bavaria and Welf III of Carinthia attempted to overthrow Henry's rule through a widely spread conspiracy, and only their demise saved him from great trouble. Conrad, who had fled to Hungary,

managed to subvert that country to such an extent that German influence remained permanently weakened. Although resistance against
him stiffened with time, Henry continued to rule with moderation. Perhaps because he was aware of a lessening of his powers, his actions became haphazard. Instead of holding on to duchies that he had inherited, he entrusted them to others; but he chose badly and seldom acted decisively against
his disloyal feudatories. He no longer inspired fear in his opponents--the Saxon and south German lay nobility, the alliance between Lorraine and Tuscany, the increasingly independent papacy, and the adventure-seeking Normans.

Opponents of the Emperor's policy thought it was excessively indulgent toward the church and hostile toward the lay princes. Some of this criticism was voiced among the ranks of the ecclesiastical reformers. Matters had come to such an impasse that Henry no longer pleased anyone. His demands on the people to support his military strength were heavy from the beginning, and his revenues from inheritances and confiscations were also considerable. If the empire's basic wealth did not increase in his reign, it was because he used it to fulfill the demands of his clerical friends, even as he bestowed duchies on lay nobles in order to appease them. It is not surprising that, under these circumstances, he was compelled to find other sources of revenue by seeking credits, foreclosing
mortgages, and looking after the interests of his treasury when conferring high imperial offices or church benefices. The abolition of simony (the sale of church offices) was difficult even for as high-principled a ruler as Henry, and, as a result, his enemies accused him of greed. According to some sources, in his old age Henry was rumoured to have become "untrue to himself " and inaccessible to the common people; he was reported to have refused to grant a judicial hearing to "the poor." In contrast, in the early years of his reign, he could not be praised enough for his zeal in the administration of justice.

Disintegration of the empire.

His change of personality may have resulted from the blunders and failures of his rule. After 1046 this man, shaped partly by religious ideals and partly by the harsh realities of political life, saw all his gains being swept away: northeastern Germany, Hungary, southern Italy, and Lorraine. Even the part of his work that he considered his very own, church reform, began to turn against him. A high priest
among men, who did penance even while ruthlessly persecuting and even hanging heretics, Henry learned at the end of his days that clemency, goodness, and earthly justice do not necessarily benefit a prince.

On the other hand, it may have been a physical disease that changed Henry. In 1045 he was so tortured with illness that negotiations concerning the succession were begun. The bad tidings from all corners of the empire must have complicated his condition. In September 1056 he fell sick in his favourite residence, the imperial palace at Bodfeld near Goslar, and, having assured the succession of his son Henry, he died in October.

BRITANICA

Henry III (Holy Roman Empire), called The Black (1017-1056) German king (1028-1056) and Holy Roman emperor (1046-1056), son and successor of Conrad II. When, in 1041, the Bohemians invaded the lands of the Poles, who were Henry's vassals, Henry brought them to submission, compelling the duke of Bohemia to recognize his suzerainty. Between 1043 and 1045 Henry campaigned successfully to restore the deposed Hungarian king to his throne and for a short time afterward controlled Hungary. Henry was greatly concerned with church reform and went to Rome in 1046 to settle the conflict caused by three rival claimants to the papacy. Setting aside the three antipopes, he appointed a German bishop, who, as Pope Clement II, crowned Henry Holy Roman emperor. During the rest of his reign Henry appointed three succeeding popes, all Germans. Returning to Germany, he contended with domestic rebellions. Henry supported the church's attempts to check clerical abuses; he also strengthened the power of the papacy, which proved disadvantageous for his son, Henry IV.

Al hacer una peregrinación a Tierra Santa, murió en el Viaje de regreso.

Robert I, byname ROBERT THE MAGNIFICENT, or THE DEVIL, French ROBERT LE MAGNIFIQUE, or LE DIABLE (d. July 1035, Nicaea), duke of Normandy (1027-35), the younger son of Richard II of Normandy and the father, by his mistress Arlette, of William the Conqueror of England. On the death of his father (1026/27), Robert contested the duchy with his elder brother Richard III, legally the heir, until the latter's opportune death a few years later. A strong ruler, Robert succeeded in exacting the obedience of his vassals. On the death of Robert II the Pious, king of France (1031), a crisis arose over the succession to the French throne. The Duke gave his support to Henry I against the party favouring his younger brother; in reward for his

services he demanded and received the Vexin Français, a territory not far north of Paris. A patron of the monastic reform movement, he died while returning from a pilgrimage to Jerusalem.

Notes for Ramiro I el Bastardo (Rey de Aragón):
Nacimiento del reino de Aragón

Ramiro, un hijo bastardo de Sancho III de Pamplona, recibió el condado de Aragón. Se le ha considerado el primer rey de dicho territorio, pues aunque estaba supeditado a su hermano García, rey de Pamplona, luchó lo indecible para consolidar la independencia de Aragón. Es posible, no obstante, que no utilizara expresamente el título regio. Por otra parte la temprana muerte de su hermano Gonzalo, que había recibido los señoríos de Sobrarbe y Ribagorza, le permitió asimismo incorporar esos

dominios (1044). El reino de Aragón de mediados del siglo XI limitaba al oeste con el reino de Pamplona, al este con el condado de Urgel y al sur con el reino taifa musulmán de Zaragoza. El hijo y sucesor de Ramiro I, Sancho Ramírez, aprovechó la vacante que se produjo en el trono navarro en el año 1076 para ser reconocido como rey de aquel territorio. De esa manera Aragón y Navarra volvían a unirse, aunque en esta ocasión las dos entidades políticas ostentaban el mismo título, pues ambos eran reinos.
Sancho Ramírez hizo de la ciudad de Jaca el centro político de su reino a la vez que uno de los hitos de la ruta de los peregrinos que se encaminaban desde Francia, a través de los Pirineos, a Santiago de Compostela (el conocido como Camino de Santiago). Sancho Ramírez, por otra parte, impulsó la Reconquista aragonesa, llevando a cabo una espectacular campaña, organizada con aire de cruzada, sobre Barbastro (1064), aunque al poco tiempo se perdió dicha plaza. Años más tarde conquistó Graus (1083) y Monzón (1089), aunque murió en el asedio de Huesca (1094). Pero fue su hijo y sucesor Pedro I el que alcanzó los principales éxitos militares, al conquistar Huesca (1096), tras vencer a los musulmanes en la batalla de Alcoraz, y Barbastro (1110), esta vez con carácter definitivo. En apenas unas décadas Aragón había conseguido duplicar su extensión territorial, al ganar la denominada Tierra Nueva, ubicada en el Prepirineo. Allí permaneció una parte de su antigua población musulmana, pero también llegaron repobladores, básicamente procedentes de las zonas montañosas del norte.

Ramiro I (de Aragón) (c.1000-1063), primer rey de Aragón (1035-1063). Hijo natural de Sancho III el Mayor de Pamplona, recibió el condado de Aragón, dependiente de su hermano García IV Sánchez III, rey de Navarra, pero adoptó el título regio. Años después, aliado con los taifas musulmanes de Zaragoza, Huesca y Tudela, atacó a su hermano y rey navarro García (1043), pero fue derrotado cerca de Tafalla. A la muerte de su hermanastro Gonzalo, incorporó los condados de Sobrarbe y Ribagorza (1044). Procuró fortalecer la frontera meridional de su reino, creando para ello diversas tenencias, en la sierra de Guara y en varios valles fluviales. Posteriormente atacó al taifa de Zaragoza, ocupando la localidad de Benabarre, pero el musulmán, auxiliado por Castilla, derrotó y dio muerte a Ramiro I en la localidad oscense de Graus.

Notes for Sancho III el Mayor (Rey de Navarra):
Sancho III. 965 - 1035. Rey de Navarra, hijo de Garcka Sanchez. Rey de Navarra y conde de Aragón. Ascendió al trono de Castilla por su matrirnonio con Elvira. Anexó territorios a sus posesiones y llevó a cabo una especie de unidad
nacional limitada, pero dividió sus reinos entre sus hijos.

Sancho III Garcés, byname SANCHO THE GREAT, Spanish SANCHO EL MAYOR, or EL GRANDE (b. c. 992--d. Oct. 18, 1035), king of Pamplona (Navarre) from about 1000 to 1035, the son of Garcka II (or III).

Sancho established Navarrese hegemony over all the Christian states of Spain at a time when the caliphate of Córdoba was in a state of turmoil. Sancho was uninterested in a crusade against the Moors, but he was interested in the expansion of Pamplona, which he began by the seizure of the ancient Frankish counties of Sobrarbe and Ribagorza (1016-19). A skilled politician, Sancho pursued his aims more by subversion than by force of arms. He persuaded the Count of Barcelona, Berenguer Ramón I, to accept him as overlord. Gascony did likewise, giving him direct sovereignty over Labourd. As a consequence of his marriage (1010) to Munia, daughter of Count Sancho Garcka (d. 1017) of Castile, Sancho secured his own acceptance as count when Sancho Garcka's son, the child Count Garcka, was assassinated (1029). He then took up Castilian irredentist claims in eastern Leon and occupied the Leonese capital, where he was crowned (1034)--taking the imperial title. Sancho, who introduced some feudal practices into his new dominions, also encouraged the Cluniac reformers and established much closer contacts generally between Christian Spain and trans-Pyrenean Europe. In his will, however, he deliberately destroyed the empire he had created: he divided it into four kingdoms and left these to his four sons, thus making inevitable the fratricidal wars that followed

his death. Sancho created the kingdom of Aragon and was responsible for the elevation of Castile from county to kingdom, though he transferred some Castilian territory to Pamplona, which he left to his eldest son, Garcka III (or IV).

Notes for García III (Rey de Navarra):
García III (or IV) (d. Sept. 1, 1054, Atapuerca, Castile [Spain]), king of Pamplona (Navarre) from 1035 to 1054. Following an old custom, Sancho III the Great divided his Spanish lands among his four sons: Ferdinand I received Castile; Gonzalo received Sobrarbe and Ribagorza (modern Huesca); Ramiro I received Aragon; and García III received the ancient patrimony of Pamplona enlarged by
portions of Castile. Although García helped his brother Ferdinand I of Castile against the Leonese, Ferdinand made war on him to recover the territories of Castile, and García was killed in the Battle of Atapuerca. He was succeeded by his son Sancho IV.

Notes for Alfonso V (Rey de Castilla y León):
Alfonso V, byname ALFONSO THE NOBLE, Spanish ALFONSO EL NOBLE (b.994--d. 1028), king of Leon from 999 to 1028, son of Bermudo II. He came to the throne because the devastating campaigns of Almanzor (see Mansur, Abu 'Amir al-) had forced his father to accept Almanzor's de facto suzerainty over Leon. The Leonese were forced to take part in the Moorish campaign against the Catalans (1003) and to suffer other indignities and incursions. The political
troubles continued until the fall of the caliphate (1031) relieved Leon of Islamic pressure, but Alfonso was soon faced by the growing power of Sancho III of Pamplona (Navarre). His marriage (1023/24) to Sancho's daughter Urraca ended this threat, and, in the last years of his life, he was able to undertake the reconquest of the Portuguese territories lost during Almanzor's time.
He was killed at the siege of Viseu.

Notes for II Robert, King Of France (996-1031):
Robert II, byname ROBERT THE PIOUS, French ROBERT LE PIEUX (b. c. 970, Orléans, Fr.--d. July 20, 1031, Melun), king of France who took Burgundy into the French realm.

The son of Hugh Capet, founder of the Capetian dynasty, and Adelaide of Aquitaine, Robert was educated at the episcopal school of Reims under Gerbert of Aurillac, later Pope Sylvester II. Soon after his own coronation (July 987), Hugh prudently arranged the election and coronation (December 987) of Robert, thus facilitating his son's eventual succession (October 996) as sole ruler. His excommunication as a result of his marriage within the prohibited degrees of relationship was eventually lifted after the repudiation of the childless Bertha in 1001. Constance of Arles, whom the King married two years later, was the mother of his successor, Henry I.

Robert's domain was not extensive; and, to increase his power, he vigorously and tenaciously pressed his claim to fiefs as they became vacant. Thus, when the duke of Burgundy died without an heir (1002), Robert went to war against a rival claimant. Only in 1015, however, did he finally succeed in subduing the rich duchy. (The gain was transitory, for in 1032 Henry I granted Burgundy to his brother, Robert, and it thereafter remained for centuries outside royal control.)

A patron of the Cluniac monastic movement, Robert apparently ruled firmly and judiciously in his own lands.

Notes for I Henry, King Of France:

Henry I (b. c. 1008--d. Aug. 2, 1060, Vitry-aux-Loges, France), king of France from 1026 to 1060 whose reign was marked by struggles against rebellious vassals.

The son of Robert II the Pious and grandson of Hugh Capet, founder of the Capetian dynasty, Henry was anointed king at Reims (1026) in his father's lifetime, following the death of his elder brother Hugh. His mother, Constance, however, favoured his younger brother Robert for the throne, and civil war broke out on King Robert II's death (1031). The younger Robert was given Burgundy
in 1032, after Henry had sought refuge with Robert, Duke of Normandy. From 1033 to 1043 Henry struggled with his feudatories, notably Eudes of Blois and his brother Robert. In 1055, as the result of an agreement made by Robert II, the county of Sens came to the crown as the sole territorial gain of Henry's reign.

iii. Notes for Berenguer Ramón I (Conde de Barcelona):
Berenguer Ramón I, llamado el Curvo (c.1006-1035), conde de Barcelona (1017-1035). Su corta edad al acceder al condado motivó que su madre, Ermesinda, ejerciera durante los primeros anos la tutela. Su etapa de gobierno fue, en general, packfica, pues coincidió con el declive del califato de Córdoba. Berenguer Ramón I fue aliado del rey taifa de Lérida, pero hostil al de Zaragoza. La actividad repobladora continuó, aunque tkmidamente, por la Segarra y las tierras altas del Gayi. Otorgó privilegios a los ciudadanos de Barcelona (1025) y estuvo presente en la dedicación del templo de Ripoll (1032). En sus sltimos anos de gobierno, los musulmanes realizaron una incursión por la zona de Calaf (1033). Asimismo, reunió en Vic (1035) una asamblea de la que salió una constitución de paz y tregua. Murió, al parecer, guerreando con el conde de Cerdana.

Berenguer Ramon I (reigned 1018-35), divided and bequeathed his lands among his three sons; however, Sane (or Sancho) in 1049 and Guillem (or William) in 1054 renounced their inheritances in their eldest brother's favour, thus reuniting the lands.

Notes for Tancredo de Hauteville:

Hauteville, HOUSE OF, Italian ALTAVILLA, line of Norman lords and knights who were founders of fiefdoms and kingdoms in southern Italy and Sicily in the 11th and 12th centuries. The wars fought by members of the Hauteville family contributed to a steady reduction of Muslim and Byzantine power in the region. In their conquered territories the Hauteville descendants established strong states that were organized according to hierarchical feudal norms. Freedom of religious worship was widely permitted.

Three Hauteville brothers-- William, Drogo, and Humphrey--were among the Norman knights who flocked to southern Italy in the early 11th century. The sons of a minor Norman lord, Tancred, the three settled in southern Italy and Sicily, which were at that time a patchwork of warring towns and principalities. Serving at first as mercenaries, the brothers soon began to seize lands for themselves. They also recruited more knights for their wars and campaigns of plunder. In 1041 a Norman-Lombard force defeated a Byzantine army near Melfi. In a still
greater challenge, Pope Leo IX led a combined force of local levies, Germans (Lombards), and others against the Normans at Civitate in 1053. The Normans again scored an impressive victory. A Hauteville, Robert Guiscard (c. 1015-85), a younger half brother of the earlier Hautevilles, distinguished himself and became a leader in the Norman conquests. Gradually but methodically, he drove the Byzantine forces from southern Italy. He made peace with Pope Nicholas II in 1059. Robert and his brother, Roger (1031-1101), then invaded Muslim-held
Sicily. Roger became Roger I, ruler of Sicily. The Norman conquests continued until, with the fall of Bari in 1071, the last Byzantine forces had been driven from the Italian boot. Palermo in Sicily, with its great port, fell in 1072. At one time the Normans attacked the Byzantine Empire itself but had to withdraw because of revolts in Italy. Still allies of the papacy, the Norman knights became crusaders in the closing years of the 11th century. Tancred (c. 1075-1112), a Hauteville, joined the First Crusade in 1096 and gained fame as a military leader. By 1154 Roger II (1095-1154), the youngest living son of Roger I, had extended his kingdom throughout all of southern Italy and Sicily and into Greece, had taken control of part of North Africa, and had made his court at Palermo an important centre of learning and culture. Under later rulers, the Hauteville dynasty gradually faded. In 1194 King Henry VI of Germany invaded Sicily. Taking complete control of the Norman kingdom, Henry put German officials into key administrative posts.

BRITANICATancred OF HAUTEVILLE, French TANCRCDE DE HAUTEVILLE (d. Dec. 12, 1112, Antioch), regent of Antioch, one of the leaders of the First Crusade.

Tancred was a Norman lord of south Italy. He went on the crusade with his uncle, Bohemond (the future Bohemond I of Antioch), and first distinguished himself in Cilicia, where he captured Tarsus from the Turks and came into conflict with his fellow crusader, Baldwin of Boulogne. He played a prominent part in most of the major battles of the crusade, and after the capture of Jerusalem (1099) he received the title prince of Galilee. He served as regent of the principality of Antioch for Bohemond while the latter was a prisoner of the

Turks (1101-03), and controlled Antioch permanently after Bohemond returned to Europe in 1104.

As regent of Antioch, and also of Edessa from 1104 to 1108, Tancred became the chief Latin magnate of northern Syria, and engaged in continual warfare with both the Turks and the Byzantines until his death. The portrayal of Tancred by Torquato Tasso in the Italian epic poem Gerusalemme liberata is largely imaginary.

Notes for Roger (Ruggiero) I Conde de Sicilia:
Roger I, byname ROGER GUISCARD (b. 1031, Normandy, Fr.--d. June 22, 1101, Mileto, Calabria [Italy]), count of Sicily from 1072. He was the last son of the second marriage of Tancred of Hauteville.

Roger went to Italy in 1057 to aid his brother Robert Guiscard in his conquest of Calabria from the Byzantines (1060). They began the conquest of Sicily from various Muslim rulers in 1061 with the capture of Messina, and they completed it in 1091. The turning point of the struggle was the capture of Palermo in 1072, when Robert invested Roger as his vassal with the county of Sicily and Calabria with a limited right to govern and to tax. After Robert's death Roger acquired full right to govern from Robert's son and in 1098 received the title of apostolic legate from Pope Urban II, which gave him control of the church in Sicily. At his death, Roger had created a centralized, efficient government, where the authority of the count was unchallenged.

Notes for Lakn Fernindez (abuelo del Cid):
Gracias a documentos de la época algo sabemos acerca de algunos de los ancestros del Cid.

Se puede seguir la pista de su abuelo paterno, Lakn Nsnez, desde mediados los anos cuarenta del siglo XI hasta comienzos de los sesenta del mismo siglo: era un hombre que gozaba de una posición social lo suficientemente importante como para figurar como testigo en las cartas promulgadas por el rey Fernando I durante la adolescencia de Rodrigo. Su hijo, padre de Rodrigo, Diego Laknez, fue un soldado destacado que derrotó a los navarros en el

campo de batalla y recuperó varios territorios que habkan sido cedidos por Fernando I a su hermano Garcka de Navarra en 1037-8: Ubierna, al norte de Vivar, en el valle del rko del mismo nombre, Urbel y La Piedra, situados a unos pocos kilómetros hacia el noroeste. Estos hechos, dificiles de datar, pudieron haber tenido lugar hacia el final de los anos cincuenta del siglo XI.

De la madre de Rodrigo no se sabe absolutamente nada. El hecho de que el nino recibiera un nombre muy comsn en la familia materna, y no tanto en la paterna, podrka indicar que la primera era bastante mis importante que la segunda. Su abuelo materno, Rodrigo Alvarez, fue sin lugar a dudas un hombre notable. El y su hermano Nuno habkan sido desde el principio firmes partidarios de Fernando I; Rodrigo asistió a su coronación en León en 1038 y con frecuencia aparece citado en sus cartas como testigo; Nuno ocupaba en nombre del rey la importante fortaleza de Amaya, al norte de Burgos, y Rodrigo el castillo de Luna, al norte de Miranda de Ebro. Rodrigo también administraba los territorios dependientesde Mormojón, Moradillo, Cellorigo y Curiel, los tres sltimos situados en las conflictivas zonas contiguas a las marcas castellanas del sur y del este.

Parientes tan bien relacionados y tan leales a la dinastka gobernante podkan ser generosos con los miembros mis jóvenes de la familia. A los catorce anos, el futuro Cid fue puesto al servicio del hijo mayor del rey Fernando Sancho, heredero del trono de Castilla.

Notes for Alfonso V (Rey de Castilla y León):
Alfonso V, byname ALFONSO THE NOBLE, Spanish ALFONSO EL NOBLE (b.994--d. 1028), king of Leon from 999 to 1028, son of Bermudo II. He came to the throne because the devastating campaigns of Almanzor (see Mansur, Abu 'Amir al-) had forced his father to accept Almanzor's de facto suzerainty over Leon. The Leonese were forced to take part in the Moorish campaign against the Catalans (1003) and to suffer other indignities and incursions. The political troubles continued until the fall of the caliphate (1031) relieved Leon of Islamic pressure, but Alfonso was soon faced by the growing power of Sancho III of Pamplona (Navarre). His marriage (1023/24) to Sancho's daughter Urraca ended this threat, and, in the last years of his life, he was able to undertake the reconquest of the Portuguese territories lost during Almanzor's time.
He was killed at the siege of Viseu.

Notes for Ramón Borrell III (Conde de Barcelona):
Ramón Borrell (972-1017), conde de Barcelona (992-1017). Primogénito de Borrell II, heredó de él los condados de Barcelona, Gerona y Ausona, en tanto que su hermano Armengol (Ermengol) recibió el de Urgel. La llegada al pontificado de Silvestre II (999), permitió a Ramón Borrell consolidar la ruptura de los vknculos con la monarquka franca. Un ataque a los musulmanes de los llanos de Urgel provocó la reacción del hijo de Almanzor, Abd-al-Malik, que realizó una devastadora correrka, en el ano 1003, por las tierras catalanas. Anos después Ramón Borrell intervino en las disputas internas de al-Andalus, dirigiendo una expedición que logró una victoria sobre Sulayman en las proximidades de Córdoba (1010). Todavka en el ano 1015 efectuó una incursión por tierras musulmanas, llegando hasta los rkos Ebro y Segre.

Notes for I Duncan, King Of Scotland:
Duncan I (d. Aug. 1, 1040, near Elgin, Moray, Scot.), king of the Scots from 1034 to 1040.

Duncan was the grandson of King Malcolm II (ruled 1005-34), who irregularly made him ruler of Strathclyde when that region was absorbed into the Scottish kingdom (probably shortly before 1034). Malcolm violated the established system of succession whereby the kingship alternated between two branches of the royal family. Upon Malcolm's death, Duncan succeeded peacefully, but he soon faced the rivalry of Macbeth, Mormaor (subking) of Moray, who probably had a better claim to the throne. Duncan besieged Durham unsuccessfully in 1039 and in the following year was murdered by Macbeth. Duncan's elder son later killed Macbeth and ruled as King Malcolm III Canmore (1058-93).

Notes for Garcka III (Rey de Navarra):
Garcka III (or IV) (d. Sept. 1, 1054, Atapuerca, Castile [Spain]), king of Pamplona (Navarre) from 1035 to 1054. Following an old custom, Sancho III the Great divided his Spanish lands among his four sons: Ferdinand I received Castile; Gonzalo received Sobrarbe and Ribagorza (modern Huesca); Ramiro I received Aragon; and Garcka III received the ancient patrimony of Pamplona enlarged by
portions of Castile. Although Garcka helped his brother Ferdinand I of Castile against the Leonese, Ferdinand made war on him to recover the territories of Castile, and Garcka was killed in the Battle of Atapuerca. He was succeeded by his son Sancho IV.

Notes for Sancho I (Rey de Aragón):
Sancho I Ramírez o Sancho V (de Navarra) (1043-1094), rey de Aragón (1063-1094) y de Pamplona (nombre por el que, en un principio, se conoció al reino de Navarra; 1076-1094). Era hijo del rey aragonés Ramiro I. Accedió al trono pamplonés (1076) tras la muerte violenta de Sancho IV. Impulsó el avance aragonés hacia el sur. En dicha empresa, que comenzaba a tener un aire de cruzada, colaboraron también caballeros ultrapirenaicos. Conquistó Graus en 1083 y, un año más tarde, Arguedas, pero fracasó en el intento de ocupar Tudela (1087). Más tarde, tomó Monzón (1089) y construyó el castillo de Montearagón (1088) y la fortaleza del Castellar (1091). Colaboró con Alfonso VI de Castilla en la batalla de Sagrajas (1086), en la que vencieron los almorávides. En su reinado se introdujo en Aragón el rito romano. Tras la conquista de Luna puso sitio a Huesca, pero en dicha acción murió.

Notes for I Robert, Of Normandy:
Roberto I Duque de Normandka, hijo del Duque Ricardo II y padre del famoso Guillermo el Conquistador, ocupó el ducado de 1028 hasta su muerte. Su firmeza de caricter y su crueldad le ganaron el tktulo de "El Diablo". Se enfrentó al Rey Canuto en Inglaterra en defensa de sus sobrinos. Al hacer una peregrinación a Tierra Santa, murió en el Viaje de regreso.

Robert I, byname ROBERT THE MAGNIFICENT, or THE DEVIL, French ROBERT LE MAGNIFIQUE, or LE DIABLE (d. July 1035, Nicaea), duke of Normandy (1027-35), the younger son of Richard II of Normandy and the father, by his mistress Arlette, of William the Conqueror of England. On the death of his father (1026/27), Robert contested the duchy with his elder brother Richard III, legally the heir, until the latter's opportune death a few years later. A strong ruler, Robert succeeded in exacting the obedience of his vassals. On the death of Robert II the
Pious, king of France (1031), a crisis arose over the succession to the French throne. The Duke gave his support to Henry I against the party favouring his younger brother; in reward for his services he demanded and received the Vexin Franeais, a territory not far north of Paris. A patron of the monastic reform movement, he died while returning from a pilgrimage to Jerusalem.

Notes for V Baldwin, Count Of Flanders:
Baldwin V, also called BALDWIN OF LILLE, French BAUDOUIN DE LILLE, Dutch BOUDEWIJN VAN RIJSEL (d. Sept. 1, 1067), count of Flanders who became one of the most influential figures of 11th-century Europe. He was an active, enterprising man and greatly extended his power by wars and alliances. He obtained from the Holy Roman emperor Henry IV the territory between the Scheldt and the Dender as an imperial fief, as well as the margravate of Antwerp. So powerful had he become that on the decease of Henry I of France he was appointed regent during the minority of Philip I (1060-66). Before his death he saw his eldest daughter Matilda (d. 1083) sharing the English throne with William the Conqueror; saw his eldest son, Baldwin of Mons, in possession of Hainaut in right of his wife Richilde, heiress of Regnier V (d. 1036); and saw his
second son, Robert the Frisian, regent (voogd) of the county of Holland.

Notes for Bohemond II, Prince Of Antioch:
Bohemond II (b. 1107--d. February 1130), prince of Antioch from 1119 to 1130.

The son of Bohemond I and Constance of France, he went from Apulia to Antioch in 1126. Antioch had been under the regency of Baldwin II of Jerusalem since 1119, when the previous prince, Roger, had been killed. Soon after his arrival in Antioch, Bohemond married Alice, the younger daughter of Baldwin II. After joining with Baldwin in an attack on Damascus (1129), he was slain on the northern frontier by a Muslim army. The local emir had his severed head embalmed and sent as a gift to the caliph.

Notes for Felipe I (Rey de Francia):
Philip I (of France) (1052-1108), king of France (1060-1108), the eldest son of Henry I, king of France. The first six years of his reign were spent under the regency of his mother and his uncle. Philip's reign was troubled by many clashes with his powerful vassals, particularly in Normandy, but he succeeded in enlarging his dominions. Philip was excommunicated in 1095 because he had repudiated his wife, Bertha of Holland, and married Bertrada, the wife of the count of Anjou.

Philip I (b. 1052--d. July 29/30, 1108, Melun, Fr.), king of France (1059/60-1108) who came to the throne at a time when the Capetian monarchy was extremely weak but who succeeded in enlarging the royal treasury by a policy of devious alliances, the sale of his neutrality in the quarrels of powerful vassals, and the practice of simony on a huge scale.

Philip was the elder son of Henry I of France by his second wife, Anne of Kiev. Crowned at Reims in May 1059, he became sole king on his father's death in 1060. Two years after he came of age in 1066, he obtained the county of Gatinais as the price of his neutrality in a family struggle over Anjou and thereby linked the royal possessions in Sens with those around Paris, Melun, and Orléans. His major efforts, however, were directed toward Normandy, in which from 1076 he
supported Robert II Curthose, its ineffectual duke, first against Robert's father, King William I of England, then against Robert's brother, William II. Philip's true goal was to prevent emergence of a rival power in Normandy, for he was willing to abandon Robert whenever it seemed possible he might become dangerous.

Because of his firm determination to retain control over all appointments to ecclesiastical posts, which he blatantly sold, Philip was eventually drawn into conflict with the papacy. This conflict was exacerbated by his matrimonial affairs; his scandalous "marriage" with Bertrada de Montfort, wife of a vassal, brought him repeated excommunication. By 1104, when the struggle with the papacy was finally ended, Louis VI, Philip's son by his legitimate wife, Bertha, had taken over the administration of the kingdom, Philip having been rendered inactive by his extreme obesity.

Notes for Bohemond I , Prince Of Antioch:
Bohemond I, byname BOHEMOND OF OTRANTO, French BOHÉMOND DE TARENTE, original name MARC (b. 1050-58--d. March 7, 1111, Canossa, Apulia [now Canosa di Puglia, Italy]), prince of Otranto (1089-1111) and prince of Antioch (1098-1101, 1103-04), one of the leaders of the First Crusade, who conquered Antioch (June 3, 1098).

Son of Robert Guiscard (the Astute) and his first wife, Alberada, Bohemond was christened Marc but nicknamed after a legendary giant named Bohemond. The nickname proved well taken because physically Bohemond was the ideally tall and strong knight--in the words of a contemporary, "a wonderful spectacle." His boyhood home was in southern Italy, where his Norman father, Robert, had gone as a mercenary and had risen to the rank of duke of Apulia and Calabria. Here Bohemond became involved in his father's wars and learned his trade as a fighter and leader. This early training must be inferred, however, as Bohemond's childhood is poorly recorded, and even his date of birth is unknown. In 1079 he was in command of a unit of his father's army. Meanwhile, his stepmother, Sigelgaita, bore his father's heir-to-be, Roger Borsa; thus, Bohemond no doubt felt early in life that he would have no patrimony because of his half brother and so would have to seek lands and fortune in the weakened condition of the
Byzantine Empire.

In 1081 Bohemond, in command of his father's army, captured Avlona, a town south of Durazzo; but in this same year Alexius I Comnenus became ruler of the Byzantine Empire and challenged the Normans. For more than three decades Alexius and Bohemond were rivals. In the opening struggle, 1081-85, Bohemond and his father came close to dismembering the Greek Empire in the West. The Norman army won a few brilliant victories, but Alexius drove Bohemond from Larissa in Thessaly in 1083, and the death of Robert in 1085 left Bohemond without a patrimony and with little hope of success against Byzantium. In the next four years Roger Borsa allowed Bohemond to gain a foothold in Bari, where he awaited another chance to move against Alexius.

The chance came when Pope Urban II launched the First Crusade in November 1095 by offering rewards in both this world and the next for those who wrested the Holy Sepulchre from the Saracens. When the word reached Bohemond, he set off for the East. He and his small band of Normans crossed the Greek lands in the winter of 1096-97 with few incidents; and on passing through Constantinople (Istanbul), he made friendly, though cautious, terms with the emperor Alexius. The latter managed to extract oaths from most of the leaders, including Bohemond, and helped them cross the Bosporus, speeding them with promises of aid if they would return to the sovereignty of the emperor the Byzantine lands recaptured from the Muslims. In the ensuing campaigns against the Turks, Bohemond distinguished himself at Nicaea, Dorylaeum, and Antioch, which was besieged from October 1097 until June 3, 1098. The city of Antioch fell to the crusaders through his cunning and his negotiations with a traitor. After a brief, unsuccessful countersiege by the Turks, during which Bohemond more or less assumed command, the crusaders dawdled away the summer and fall.

When the crusading army marched southward to Jerusalem in January 1099, Bohemond was left the de facto possessor of Antioch, although his claim was not openly supported for fear of violating the oath of Alexius. The Norman leader did not participate in the capture of Jerusalem but did, for the sake of appearances, journey later to the Holy Sepulchre. With the departure of many crusaders for their homelands, Bohemond was left with his city. It might seem in 1100 that
Bohemond was destined to found a great principality in Antioch; he had a fine territory, a good strategical position, and a strong army. But he had to face two great forces--the Byzantine Empire, which claimed the whole of its territories, and the strong Muslim principalities in the northeast of Syria. Between these two forces he failed. Following sorties against Aleppo, Bohemond made the mistake of moving against the emir of Sebastea (Sivas), north of Antioch. He fell into an ambush and was captured and held for months.

Released in 1103, he returned to Antioch and its problems. In 1105 Bohemond was in Bari to enlist reinforcements for his struggle with the Byzantines. In September 1105 he went to Rome to interview the pope and then journeyed, early in 1106, through France. There, babies were named for him, crowds heard him denounce the perfidious Alexius, and shrines received sacred relics
from his hands. In the spring of 1106 Bohemond married Constance, the daughter of Philip I of France.

Bohemond, who 30 years before had been a landless young man, now stood at the pinnacle of his career. By September 1107

he was ready to launch his crusade against the Byzantines and within a month had landed a large army at Avlona. In the months that followed, Durazzo held firm against the Normans, and Bohemond met with misfortune in Albania. In this impasse Alexius, anxious to
end the war, offered Bohemond Antioch and other Greek cities in return for vassalage. In accepting these terms, Bohemond suffered humiliation even though he retained control of Antioch. He had used the crusade against Alexius to further his ambition for an empire that stretched from Apulia to Antioch and had thereby cheapened the crusading idea.

The years following this peace of discord are poorly recorded. Constance bore Bohemond two sons, one of whom later became prince of Antioch. Bohemond probably sought to raise another army, but these efforts were curtailed by his death in 1111. His combat with the Byzantines was ended, and his rival Alexius followed him in death in 1118. Nicknamed for a giant, Bohemond had fought against gigantic odds and at death bequeathed to his heirs one of the important crusader states, the principality of Antioch. History records him as a handsome man, a warrior of genius, and a gifted diplomat.

Notes for Sancho I (Rey de Aragón):
Sancho I Ramkrez o Sancho V (de Navarra) (1043-1094), rey de Aragón (1063-1094) y de Pamplona (nombre por el que, en un principio, se conoció al reino de Navarra; 1076-1094). Era hijo del rey aragonés Ramiro I. Accedió al trono pamplonés (1076) tras la muerte violenta de Sancho IV. Impulsó el avance

aragonés hacia el sur. En dicha empresa, que comenzaba a tener un aire de cruzada, colaboraron también caballeros ultrapirenaicos. Conquistó Graus en 1083 y, un ano mis tarde, Arguedas, pero fracasó en el intento de ocupar Tudela (1087). Mis tarde, tomó Monzón (1089) y construyó el castillo de Montearagón (1088) y la fortaleza del Castellar (1091). Colaboró con Alfonso VI de Castilla en la batalla de Sagrajas (1086), en la que vencieron los almorivides. En su reinado se introdujo en Aragón el rito romano. Tras la conquista de Luna puso sitio a Huesca, pero en dicha acción murió.

Notes for Alfonso I El Batallador:
ALFONSO EL BATALLADOR (b. c.1073--d. September 1134), king of Aragon and of Navarre from 1104 to 1134.

Alfonso was the son of Sancho V Ramírez. He was persuaded by Alfonso VI of Leon and Castile to marry the latter's heiress, Urraca, widow of Raymond of Burgundy. In consequence, when Alfonso VI died (1109) the four Christian kingdoms were nominally united and Alfonso I took his father-in-law's imperial title. The union failed, however, because Leon and Castile felt hostility toward an Aragonese emperor; because Urraca disliked her second husband; and because Bernard, the French Cluniac archbishop of Toledo, wanted to see his protégé, Alfonso Ramírez (infant son of Urraca and her Burgundian first husband), on the imperial throne. At Bernard's prompting, the Pope declared the Aragonese marriage void, but Alfonso continued to be involved in civil strife in the central kingdom until he eventually gave up his claims in favour of
his stepson after the death of Urraca (1126). Despite these embroilments, he achieved spectacular victories against the Moors, capturing Saragossa in 1118 and leading a spectacular military raid far into southern Andalusia in 1125. In his campaigns he received much help from the rulers of the counties north of the Pyrenees, resulting in the involvement of Aragon in the affairs of southern
France. Alfonso was fatally wounded in battle at Fraga in 1134. Deeply religious, he bequeathed his kingdom to the Templars and the Hospitallers, but his former subjects refused to accept the

donation, and the kingdoms eventually came under the control of the counts of Barcelona.

BRITANICA

Notes for Urraca (Reina de Castilla):
Urraca (b. 1077-81--d. March 8, 1126, Saldana, Castile [Spain]), queen of Leon and Castile from 1109 to 1126, daughter of Alfonso VI.

Urraca became her father's heiress when her brother, Sancho, was killed at Uclés (1108). She was the widow of Count Raymond of Burgundy, by whom she had had one son, Alfonso Ramírez (born 1104), the future Alfonso VII. To counterbalance--it was hoped--the dangers of a female succession during the Almoravid crisis, Urraca's marriage to her second cousin, Alfonso I of Aragon, was arranged (1109). This marriage, instead of producing political stability in Urraca's kingdom, led to years of anarchy. Urraca and her husband, according to the marriage settlement, became corulers in each other's lands, and Alfonso thereupon put Aragonese garrisons into many Leonese and Castilian cities. The notion of an Aragonese-Castilian political union was, however,
premature, and although Urraca's municipalities tended to accept the Aragonese king, the magnates were hostile. Civil war broke out and continued for years, many supporting the claims of the child Alfonso Ramírez to the throne. Matters were further complicated by the temperamental incompatibility of Urraca and her husband, who soon quarreled. Pope Paschal II, moreover, declared their marriage canonically invalid. They finally separated in 1114, though the Aragonese king continued for some years thereafter to keep his garrisons in Castile and to use the royal title.

Struggles also continued between nobles and municipalities, between rival bands of magnates, between the archbishops of Santiago and Toledo, and between the former, the bishop Diego Gelmírez, and Urraca herself. Alfonso Ramírez was crowned by Gelmírez in 1111, and his reign in Galicia began effectively--despite Urraca's intermittent but active opposition--in 1116. Urraca's
death in 1126 ended a disastrous episode in the medieval political history of Christian Spain.

Notes for Roger (Ruggiero) I Conde de Sicilia:
Roger I, byname ROGER GUISCARD (b. 1031, Normandy, Fr.--d. June 22, 1101, Mileto, Calabria [Italy]), count of Sicily from 1072. He was the last son of the second marriage of Tancred of Hauteville.

Roger went to Italy in 1057 to aid his brother Robert Guiscard in his conquest of Calabria from the Byzantines (1060). They began the conquest of Sicily from various Muslim rulers in 1061 with the capture of Messina, and they completed it in 1091. The turning point of the struggle was the capture of Palermo in 1072, when Robert invested Roger as his vassal with the county of Sicily and Calabria with a limited right to govern and to tax. After Robert's death Roger acquired full right to govern from Robert's son and in 1098 received the title of apostolic legate from Pope Urban II, which gave him control of the church in Sicily. At his death, Roger had created a centralized, efficient government, where the authority of the count was unchallenged.

Notes for Enrique III (Emperador Romano Germinico):
Henry III (b. Oct. 28, 1017--d. Oct. 5, 1056, Pfalz Bodfeld, near Goslar, Saxony), duke of Bavaria (as Henry VI, 1027-41), duke of Swabia (as Henry I, 1038-45), German king (from 1039), and Holy Roman emperor (1046-56), member of the Salian dynasty. He was a powerful advocate of the Cluniac reform movement that sought to purify the Western Church in the 11th century, the last emperor able to dominate the papacy.

Youth and marriage.

Henry was the son of the emperor Conrad II and Gisela of Swabia. He was more
thoroughly trained for his office than almost any other crown prince before or after. With the Emperor's approval, Gisela had taken charge of his upbringing, and she saw to it that he was educated by a number of tutors and acquired an interest in literature.

In 1036 Henry married Gunhilda (Kunigunde), the young daughter of King Canute of England, Denmark, and Sweden. Because her father had died shortly before, the union with this frail and ailing girl brought with it no political advantages. She died in 1038, and the emperor Conrad died the following year.

His 22-year-old successor as German king resembled him in appearance. From his mother Henry inherited much, especially her strong inclination to piety and church services. His accession to the throne, unlike that of his two predecessors, did not lead to civic unrest, but his reign was burdensome from the beginning. Probably over questions of principle, the self-willed emperor quarrelled with the aging Gisela during her last years.

He devoted his energies above all to the contemporary movement to bring an end to war among Christian princes, although his own policies were not always pacific. In possession of the duchies of Franconia, Bavaria, Swabia, and Carinthia, he had attempted to carry on his father's policy of supremacy in the east and, in fact, attained sovereignty over Bohemia and Moravia.

It may have been at this time that Henry, prematurely believing he had reached the zenith of his power, displayed openly, as if it were a matter of governmental policy, his leanings toward the clerical-reform party. Intending to re-create a theocratic age like that of Charlemagne, he failed to realize that this could be done only as long as the papacy was powerless.

Still a childless widower, he married Agnes, the daughter of William V of Aquitaine and Poitou, in 1043. The match must have been intended primarily to cement peace in the west and to assure imperial sovereignty over Burgundy and Italy, and Agnes' total devotion to the church reform advocated by the Cluniac monasteries probably confirmed Henry in his decision to take her for his wife. In November 1050 she bore him a son, who later became the emperor Henry IV. There followed another boy, Conrad, and three daughters. What Henry still lacked was the highest honour--his coronation as emperor at the hands of the pope.

Control of the papacy.

When Henry reached Rome in 1046, three rivals were claiming the papacy. Henry wanted a pacified Italy, in which German supremacy was uncontested, and he wanted to receive the imperial crown from unsullied hands. He convoked a synod at Sutri, which, at his bidding, elected as the new pope a German, Suidger, bishop of Bamberg, who was inaugurated as Clement II. On the same day
the new pope crowned the imperial couple.

Rome became an imperial city, and the control over the church--i.e., the decisive vote in future conclaves--passed into the hands of the German king. In succeeding years Henry made use of this right to appoint a pope three more times. When the Normans were beginning their conquest of Calabria, Henry did not intervene to any extent in southern Italy; instead he left this problem to Pope Leo IX, who was defeated by the Normans.

Believing that the basis of his power was secure, the Emperor expected to be as successful with his internal projects as he had been in foreign affairs; but this was not to be the case. He could not carry out his ecclesiastical reforms in Germany or its neighbouring territories because he was virtually without friends among the clergy. He was increasingly opposed by the Scandinavian Church and by that of the Saxons. Also, he had to contend during most of his reign with Godfrey II, duke of Upper Lorraine, whom he repeatedly pardoned instead of disciplining.

There was unrest everywhere. In 1054-55, dukes Conrad of Bavaria and Welf III of Carinthia attempted to overthrow Henry's rule through a widely spread conspiracy, and only their demise saved him from great trouble. Conrad, who had fled to Hungary, managed to subvert that country to such an extent that German influence remained permanently weakened. Although resistance against
him stiffened with time, Henry continued to rule with moderation. Perhaps because he was aware of a lessening of his powers, his actions became haphazard. Instead of holding on to duchies that he had inherited, he entrusted them to others; but he chose badly and seldom acted decisively against
his disloyal feudatories. He no longer inspired fear in his opponents--the Saxon and south German lay nobility, the alliance between Lorraine and Tuscany, the increasingly independent papacy, and the adventure-seeking Normans.

Opponents of the Emperor's policy thought it was excessively indulgent toward the church and hostile toward the lay princes. Some of this criticism was voiced among the ranks of the ecclesiastical reformers. Matters had come to such an impasse that Henry no longer pleased anyone. His demands on the people to support his military strength were heavy from the beginning, and his revenues from inheritances and confiscations were also considerable. If the empire's basic wealth did not increase in his reign, it was because he used it to fulfill the demands of his clerical friends, even as he bestowed duchies on lay nobles in order to appease them. It is not surprising that, under these circumstances, he was compelled to find other sources of revenue by seeking credits, foreclosing mortgages, and looking after the interests of his treasury when conferring high imperial offices or church benefices. The abolition of simony (the sale of church offices) was difficult even for as high-principled a ruler as Henry, and, as a result, his enemies accused him of greed. According to some sources, in his old age Henry was rumoured to have become "untrue to himself " and inaccessible to the common people; he was reported to have refused to grant a judicial hearing to "the poor." In contrast, in the early years of his reign, he could not be praised enough for his zeal in the administration of justice.

Disintegration of the empire.

His change of personality may have resulted from the blunders and failures of his rule. After 1046 this man, shaped partly by religious ideals and partly by the harsh realities of political life, saw all his gains being swept away: northeastern Germany, Hungary, southern Italy, and Lorraine. Even the part of his work that he considered his very own, church reform, began to turn against him. A high priest
among men, who did penance even while ruthlessly persecuting and even hanging heretics, Henry learned at the end of his days that clemency, goodness, and earthly justice do not necessarily benefit a prince.

On the other hand, it may have been a physical disease that changed Henry. In 1045 he was so tortured with illness that negotiations concerning the succession were begun. The bad tidings from all corners of the empire must have complicated his condition. In September 1056 he fell sick in his favourite residence, the imperial palace at Bodfeld near Goslar, and, having assured the succession of his son Henry, he died in October.

BRITANICA

Henry III (Holy Roman Empire), called The Black (1017-1056) German king (1028-1056) and Holy Roman emperor (1046-1056), son and successor of Conrad II. When, in 1041, the Bohemians invaded the lands of the Poles, who were Henry's vassals, Henry brought them to submission, compelling the duke of Bohemia to recognize his suzerainty. Between 1043 and 1045 Henry campaigned successfully to restore the deposed Hungarian king to his throne and for a short time afterward controlled Hungary. Henry was greatly concerned with church reform and went to Rome in 1046 to settle the conflict caused by

three rival claimants to the papacy. Setting aside the three antipopes, he appointed a German bishop, who, as Pope Clement II, crowned Henry Holy Roman emperor. During the rest of his reign Henry appointed three succeeding popes, all Germans. Returning to Germany, he contended with domestic rebellions. Henry supported the church's attempts to check clerical abuses; he also strengthened the power of the papacy, which proved disadvantageous for his son, Henry IV.

Agnes OF POITOU, also called AGNES OF AQUITAINE, French AGNCS DE POITOU, or AGNCS D'AQUITAINE (b. c. 1024--d. Dec. 14, 1077, Rome [Italy]), second wife of the Holy Roman emperor Henry III. She was regent (1056-62) during the minority of her son, the future Henry IV.

Agnes was a daughter of William V the Great, duke of Aquitaine, and was a descendant of the kings of Burgundy and Italy. She married Henry III on Nov. 1, 1043, forming an alliance designed to cement the empire's relations with its neighbouring states to the west. On Henry's death she assumed the regency for her son until it was wrested from her by Archbishop Anno of Cologne in 1062. Agnes then retired to a convent.

Notes for Juan I Comnenus (Emperador Bizantino):
Comnenus FAMILY, Byzantine family from Paphlagonia, members of which occupied the throne of Constantinople for over a century (1081-1185).

Manuel Eroticus Comnenus was the first member of the family to figure in Byzantine history; an able general, he served the emperor Basil II in the East.

His son, Isaac I, leader of the military nobles and soldiery of Asia Minor, reigned as emperor from 1057 to 1059. Isaac's nephew, Emperor Alexius I (1081-1118), founder of the Comnenian dynasty, was succeeded by his son John II (1118-43).
John II was followed by Alexius I's grandson Manuel I (1143-80) and great-grandson Alexius II (1180-83). With the death of Alexius II, the elder line of the family died out. Andronicus I (1183-85), son of John II's brother Isaac, succeeded Alexius II and was the last Comnenian emperor. The family continued to play an important part in state affairs, however, and was allied by marriage to other ruling families, such as the Angeli and the despots of Epirus. Following the Latin conquest of Constantinople in 1204, Andronicus I's grandsons Alexius and David, with Georgian help, founded the empire of Trebizond, which lasted until 1461, when David Comnenus, its last ruler, was deposed. He was executed some time later by the Ottoman sultan Mehmed II.

Notes for Ladislao I El Santo (Rey de Hungrka):
Ladislas I, also called SAINT LADISLAS, Hungarian SZENT LISZLÓ (b. June 27, 1040, Poland--d.July 29, 1095, Nitra, Slovakia; canonized 1192; feast day June 27), king of Hungary who greatly expanded the boundaries of the kingdom and consolidated it internally; no other Hungarian king was so generally beloved by the people.

The son of Béla I of Hungary and the Polish princess Rycheza (Ryksa), Ladislas was born in exile. Returning to Hungary, he and his brother Géza refused to contest the throne against their cousin Salomon; however, they quarreled with him and drove him from the country (1073). Géza took the throne, and, on his death, in 1077, Ladislas succeeded him as king of Hungary.

Ladislas extended Hungary's frontier in Transylvania and occupied Croatia (1091) to protect the rights of his sister, the widow of Zvonimir, prince of

Croatia. In the investiture struggle over the nomination and installation of bishops, Ladislas sided with the pope, though he also initiated a policy of reconciliation with the Holy Roman emperor Henry IV. Ladislas rooted out heathens in his
dominions with severity and introduced Roman Catholicism to Croatia, founding the bishopric of Zagreb (1091). He introduced an elaborate legal code that brought order and prosperity to his dominions.

Ladislas died suddenly while preparing for the First Crusade. The ideal Hungarian knight, he was regarded by the nation as a saint long before his canonization.

Notes for Luis VII El Jóven (Rey de Francia):
Louis VII, byname LOUIS THE YOUNGER, French LOUIS LE JEUNE (b. c. 1120--d. Sept. 18, 1180, Paris), Capetian king of France who pursued a long rivalry, marked by recurrent warfare and continuous intrigue, with Henry II of England.

In 1131 Louis was anointed as successor to his father, Louis VI, and in 1137 he became the sole ruler at his father's death. Louis married Eleanor, daughter of William X, duke of Aquitaine, in 1137, a few days before his effective rule began, and he thus temporarily extended the Capetian lands to the Pyrenees. Louis continued his father's pacification program by building the prestige of the kingship through an administrative government based on trustworthy men of humble origin and by consolidating his rule over his royal domains rather than by adding new acquisitions. From 1141 to 1143 he was involved in a fruitless conflict with Count Thibaut of Champagne and the papacy. But thereafter his relations with the popes were good; Alexander II, whom he supported against Frederick Barbarossa, took refuge in France. But the major threat to his reign came from Geoffrey, count of Anjou and, briefly, of Normandy, and Geoffrey's son Henry, who later (1154) became King Henry II of England as well as ruler of both Anjou and Normandy. After Louis repudiated his wife Eleanor for misconduct on March 21, 1152, she married Henry, who then took over control of Aquitaine. Ironically, this act was probably to Capetian advantage because Aquitaine might have drained the resources of Louis's kingdom while bringing him little revenue. After the death of Louis's second wife, he married Alix of Champagne, whose
Carolingian blood brought added prestige to the monarchy (1160); their son became Philip II Augustus.

Louis might have defeated Henry if he had made concerted attacks rather than weak assaults on Normandy in 1152. Anglo-Norman family disputes saved Louis's kingdom from severe incursions during the many conflicts that Louis had with Henry between 1152 and 1174. Louis was helped by the quarrel (1164-70) between Henry and Thomas Becket, archbishop of Canterbury, and a revolt (1173-74) of Henry's sons. Suger, abbot of Saint-Denis, who acted as regent in 1147-49 while Louis was away on the Second Crusade, is the primary historian for Louis's reign.

Children of Luis (Rey de Francia) and Alix De Champagne are:

i. Margarita de Francia, reina de Hungría, born Abt. 1161; married Bela III (Rey de Hungría); born Abt. 1145; died 1196.

Notes for Bela III (Rey de Hungría):
Bela III fue educado en la corte bizantina. Luchó contra Venecia para recuperar Dalmacia. Reinó de 1173 a 1196. También peleó contra los búlgaros en apoyo al emperador bizantino. Esposo de una hermana del rey Felipe Augusto de Francia

Béla III (d. 1196), king of Hungary (1173-96) under whom Hungary became the leading power of south-central Europe.

Béla was educated at the Byzantine court and placed on the throne by force of arms by the Byzantine emperor Manuel I Comnenus in 1173. He made the Hungarian monarchy hereditary by naming his infant son, Imre, his successor. He also made his court among the most brilliant in Europe. Béla adopted Roman Catholicism, sought the assistance of Rome, and established close ties with France. Upon the death of his first wife, Anne of Châtillon, he married Margaret, sister of Philip II Augustus of France. Many leading Hungarian diplomats were educated in Paris during his reign, and the Cistercian and Premonstratensian monks he invited to Hungary introduced advanced agricultural methods there.

Internationally, Béla was only partly successful in his attempts to recover Dalmatia in two bloody wars with Venice (1181-88 and 1190-91), but he did help the Raskan Serbs gain independence from the Greeks and establish a native monarchy. He tried to make Galicia an appanage of his younger son Andrew, and he aided the Byzantine emperor Isaac II Angelus against the Bulgars. Béla III was one of the stronger rulers from the house of Árpád.

Notes for Alexius III Angelus (Emperador Bizantino):
Alexius III ANGELUS (d. 1211, Nicaea, Nicaean Empire [now Iznik, Tur.]), Byzantine emperor from 1195 to 1203. He was the second son of Andronicus Angelus, grandson of Alexius I. In 1195 he was proclaimed emperor by the troops; he captured his brother, the emperor Isaac II, at Stagira in Macedonia and had him blinded and imprisoned. Crowned in April 1195, Alexius III was a weak
and greedy emperor, and his coup d'état had disastrous results. Byzantine prestige declined in the Balkans, where his failure to aid his son-in-law Stephen Prvovencani (Stephen the First-Crowned) caused the latter to turn to the Bulgars for help. Campaigns against the Bulgars ended in defeat (1195 and 1196), and intrigues and diplomacy were equally unsuccessful because the new Bulgarian
ruler, Kalojan, acknowledged the pope's supremacy instead of that of Constantinople.

In 1203 the crusaders restored Isaac II and his son (crowned Alexius IV). Alexius III fled the capital with what treasure he could collect and escaped to Thrace. After an unsuccessful attempt to recover the throne, he wandered about Greece and surrendered to Boniface of Montferrat, then master of a great part of the Balkan Peninsula, but left his protection and sought shelter with Michael I, despot of Epirus. Finally, he went to Asia Minor, where his son-in-law

Theodore Lascaris was holding his own against the Latins. Alexius, joined by the Sultan of Iconium (modern Konya, Tur.), demanded Theodore's crown and, when it was refused, marched against him. Taken prisoner by Theodore in 1211, Alexius was sent to a monastery at Nicaea, where he died.

Notes for Ordono I (Rey de Asturias):
ORDONO I Rey de Asturias, m. en Oviedo en 866. Era hijo de Ramiro I. i quien sucedió hacia el ano 850, si bien desde tres anos antes su padre ya le habia asociado al gobierno, por mis que todo lo relacionado con este monarca aparce bastante oscuro, ya sean sus hechos del dominio de la leyenda. El principio de su reinado se senaló por una insurreccion de los vascos navarros que dominó sin gran esfuerzo. Poco despues venció en la Rioja a un formidable ejercito musulmin, mandado por el famoso Muza Il de Zaragoza, quien dejó en el campo 10,000 hombres y solo debió su salvación i la ligereza de su caballo (batalla de Albelda). Poco después hubo en las costas de Galicia. que formaba parte del reino de Asturias, una incursión de los normandos, que fueron arrojados de allk por el conde Pedro. Mas adelante ORDONO I reunió un poderoso ejército, con el que se trasladó i las mirgenes del Duero y conquistó gran nsmero de fortalezas y de ciudades, entre ellas Coria y Salamanca. Arrojó también i los moros de otros lugares lindantes con sus dorninios hasta que, hacia el ano 862 el emir de Córdoba envio i su hijo Almondhir contra ORDONO I, que fué vencido en las mirgenes del Duero con grandes pérdidas, tanto en hombres eomo en territorio, volviendo i pasar Salamanca y Coria i poder de los invasores. Hacia el ano 863 ORDONO I, que habia reunido un fuerte ejército, tomó completa venganza efectuando severas razias por los telritorios musulmames y extendiéndose hasta Lusitania, tras de lo cual regresó i su reino. Mientras tanto, el emir de Córdoba habka proclamado la guerra santa y se habka puesto él mismo al frente de un poderoso ejército con el que atravesó Extremadura, llegando hasta Santiago de Galicia: mas hubo de volverse sin alcanzar exito alguno. En este reinado coloca la crktica la batalla de Clavijo, que el arzobisco don Rodrigo puso legendariamente en el de Ramiro I. En cuanto i la polktica interior, ORDONO I continuó y amplió la obra de su padre, repobló gran nsmero de ciudades destruidas en otro tiempo por Alfonso I entre

ellas Amaya, Tuy, León y Astorga, creó obispados en las dos ultimas, gobernó con acierto y energka, angrandeció su reino en una tercera parte por lo menos, institutó leyes y dió la importancia debida i la religión. Era ORDONO I hombre de amable caricter y de moderadas costumbres, enérgico é incansable en la guerra y celoso de sus prerrogativas. Le sucedió su hijo Alfonso III, dejando, ademis otros cuatro: Bermudo, Nuno, Odoarico y Fruela.

Ordono I (fallecido en el 866), rey de Asturias (850-866). Hijo y sucesor de Ramiro I (842-850), con él se consolidó el sistema de sucesión patrilineal al trono astur (asturiano). Inició el proceso de expansión del reino asturiano hasta el sur de la cordillera Cantibrica. En esta labor ofensiva consiguió avanzar claramente en dirección al Duero, repoblando Astorga, León y Tuy. Igualmente fortificó Amaya y las tierras de la marca oriental del reino. Su victoria sobre Musa II de Tudela dio origen a la leyenda de la batalla de Clavijo (859), segsn la cual el triunfo se consiguió con la ayuda del apóstol Santiago. Durante su reinado tuvo que hacer frente a una incursión de normandos y a numerosas ofensivas musulmanas que asolaron la tierra alavesa y tomaron posiciones en la cuenca alta del Ebro.

Children of Ordono (Rey de Asturias) and Mummadonna æde Bigorra? Reina de Asturias are:

i. Alfonso III El Magno (Rey de Asturias), born 838; died 20 Diciembre 910 in Zamora, León; married Jimena de Navarra Reina de Asturias; born Abt. 840.

   Notes for Alfonso III El Magno (Rey de Asturias):
   The most important Christian state of the northern peninsula, the small kingdom of Asturias, was founded about 718 by DON PELAYO, a Visigothic chieftain. Pelayo's son-in-law, Alfonso, conquered nearly all the region known as Galicia, recaptured most of León, and was then crowned Alfonso I, king of León and Asturias.

Alfonso III, byname ALFONSO THE GREAT, Spanish ALFONSO EL MAGNO (b. c. 838--d. Dec. 20, 910?, Zamora, Leon), king of Asturias from 866 to 910, son of Ordoño I.

Winning a contested succession, he moved his capital forward from Oviedo to the recently restored Roman city of León. Under him, Porto (Oporto) was occupied in 868, and Castile took shape around Burgos, drawing on his Basque allies. He claimed to be reviving the Visigothic monarchy, while making the church of St. James at Santiago de Compostela the shrine of the Christian kingdom. Alfonso's territorial advances were made possible by the convulsion of the Muslim emirate of Córdoba, in which Arab dominion was challenged by the
Berber dissidents. For a time Córdoba itself was endangered, and the triumph of Alfonso was thought imminent. This did not occur, but by the end of the reign Alfonso III had occupied Coimbra, Zamora, and Burgos, settling refugees from the south.

BRITANICA

ALFONSO III greatly extended these territories during his reign, which ended in 910. During the 10th century the region of Navarre became an independent kingdom under Sancho I. As the kings of León expanded their domains to the east in the early 10th century, they reached Burgos. Because of the castles built to guard the frontiers of newly acquired territory, this region became popularly known as Castilla, or Castile. Under Count Fernán González the region became independent of León, and in 932 the count declared himself the first king of Castile. In the 11th century a considerable part of Aragón was captured from the Muslims by Sancho III, king of Navarre, who also conquered León and Castile, and in 1033 he made his son, Ferdinand I, king of Castile. This temporary unity came to an end at Sancho's death, when his domains were divided among his sons. The most prominent of Sancho's sons was Ferdinand, who acquired León in 1037, took the Moorish section of Galicia, and set up a vassal county in what is now northern Portugal. With northern Spain consolidated, Ferdinand, in 1056, proclaimed himself emperor of Spain (from the Latin Hispania), and he initiated the period of reconquest from the Muslims.

Ramiro II Rey de León y Asturias (? - 950). Subió al trono en 930 al abdicar Alfonso IV. Derrotó a Abderramin III en 933 y en 939. Logró tomar Tormes. Controló a los castellanos. Su muerte implicó el inicio de una época de desórdenes y de guerras civiles.

Ramiro II

(d. 951, León, Leon), king of Leon and Asturias in Christian Spain from 931 to 951, an exceptional general who scored several major victories (e.g., the Battle of Simancas, 939) over the caliphate of Córdoba in Muslim Spain. The second son of King Ordono II, he became king on the abdication of his elder brother, Alfonso IV. In 944 he negotiated a five-year truce with the caliph 'Abd ar-Rahman III. He failed, however, to suppress the Castilian separatist movement led by
Fernin Gonzilez, the first count of unified Castile, a region that came to ominate Spain militarily, politically, and linguistically.

Notes for Fernin Gonzilez (Rey de Castilla):

Fernin Gonzilez. (910 - 970). Rey de Castilla. Uno de los mis grander héroes espanoles de todos los tiempos. Se enfrentó heróicamente con los moros y se rebeló contra el poder de León, convirtiéndose en primer rey de Castilla, nación de la cual era conde.

La ambición polktica de Fernin Gonzilez, conde de Castilla, le lleva a mantener una actitud independiente frente al reino de León. Fernin Gonzilez inicia una ambiciosa y espectacular carrera polktica en 929, cuando recibe de Alfonso IV el titulo de "comes" y rige la mandación de Lara. En el ano 939 con Ramiro II de León, derrota en la batalla de Simancas al Califa de Córdoba Abderramin III. Aprovechando la situación confusa del reino de León y para asegurarse el favor regio, da en matrimonio a una de sus hijas al heredero leonés Ordono IV, y recibe de Ramiro II los condados de Alava, Burgos Cerezo, Lantarón y Lara, que le dan la fuerza necesaria para enfrentarse al monarca. Ramiro responde enérgicamente y Fernin es carcelado en León (944). Tras la muerte de Ramiro, las dificultades internas del reino leonés son aprovechadas por el conde para afianzar su independencia. Presta apoyo a su yerno Ordono IV El Malo para destronar a Sancho el Craso (958), lo que origina una guerra civil que aprovecha para extender sus condados hasta el Cea. Muerto en 970, su figura inspirari el poema que lleva su nombre.

Fernin Gonzilez (d. 970), the first count of all Castile. With him the political history of Castile begins. He made the new county hereditary in his family and thus secured it a measure of autonomy under the kings of Leon. In his time the capital of the county was established at Burgos and there was expansion southward into Moorish territory.

BRITANICA

Castile, Spanish CASTILLA, traditional central region constituting more than one-quarter of the area of peninsular Spain. Castile's northern part is called Old Castile and the southern part is called New Castile. The region formed the core of the Kingdom of Castile, under which Spain was united in the late 15th and early 16th centuries.

The name Castile--meaning "land of castles"--is first known to have been used in about AD 800, when it was applied to a small district at the foot of the Cantabrian Mountains in the extreme north of the modern province of Burgos. Castile expanded during the 9th century but remained a fragmented collection of petty counties, whose rulers were nominated by the kings of Asturias and Leon, until
the counties were united by Fernin Gonzilez (d. 970), the first count of all Castile. With him the political history of Castile begins. He made the new county hereditary in his family and thus secured it a measure of autonomy under the kings of Leon. In his time the capital of the county was established at Burgos and there was expansion southward into Moorish territory. Under the counts Garcka Fernindez (d. 1005) and Sancho Garcka (d. 1017), Castilian territory

reached to the Douro (Duero) River. Relations with the kings of Leon, still nominally the suzerains of Castile, were frequently bad.

In 1029 Sancho III the Great of Navarre, the son of a Castilian mother, detached Castile from Leon and on his death (1035) awarded it to his second son, who was the first to assume the title of king of Castile, as Ferdinand I (1037-65). Later, Castile was again united with Leon (1072-1157), but thereafter the two kingdoms again separated. The political and military hegemony of Castile over Leon was established by Alfonso VIII of Castile, who forced the king of Leon to do homage to him (1188). By then Castilian rule extended far south of the Tagus River and
eastward to the modern frontiers of Aragon. The Leonese kings, however, never accepted Castile's suzerainty, and Alfonso IX of Leon consequently refused to support the Castilian king Alfonso in his wars against the Islamic Berber dynasty of the Almohads. Thus, Castilian pursuit of its political hegemony over Leon served to weaken the Christian front against the Muslims. In 1230 Ferdinand III, already king of Castile, succeeded to the Leonese throne and both crowns were finally united under Castilian leadership. Meanwhile, the Muslim kingdom of Toledo in Spain had been annexed by Castile in 1085, and, by the middle of the 12th century, Castilian political hegemony in Spain was an accomplished fact. European courts in the later Middle Ages frequently identified Castile with Hispania (Spain). The final Christian conquest of most of Moorish-held Andalusia, in the extreme south, was carried out in the time of Ferdinand III.

An attempt in 1383-85 by Castile to annex Portugal by force failed, but in 1412 a Castilian prince, Ferdinand I, was successfully placed on the Aragonese throne, partly as a result of Castilian financial support and military force. This move foreshadowed the personal union of the two crowns under Ferdinand and Isabella (1479). The Spanish part of the Kingdom of Navarre was annexed by Castile in 1512, thus completing the formation of modern Spain.

The literary language of Spain after its unification was the Castilian vernacular, and the centre of political and administrative power in Spain has since always been Castile. The Spanish culture transmitted to Latin America was also largely Castilian. Nevertheless, opposition to Castile's political hegemony from the other regions, which enjoyed complete or partial independence in the Middle Ages, remains strong. It continues to be a live issue, especially since Spain's centres of industrial strength lie largely outside Castile, whose geography has made it an economically backward area. It has been claimed, with some exaggeration, that medieval Castile was a more progressive kingdom than its neighbours, with a more developed sense of unity and national destiny. Its dominant role in Spanish history may well have stemmed from the superior martial spirit and
military organization of its people.

Notes for I Richard, 3Rd Duke Of Normandy:
Richard I, byname RICHARD THE FEARLESS, French RICHARD SANS PEUR (b. c. 932--d. 996), duke of Normandy (942-996), son of William I Longsword.

Louis IV of France took the boy-duke into his protective custody, apparently intent upon reuniting Normandy to the crown's domains; but in 945 Louis was captured by the Normans, and Richard was returned to his people. Richard withstood further Carolingian attempts to subdue his duchy and, in 987, was instrumental in securing the French crown for his brother-in-law, the Robertian Hugh Capet.

Notes for Vladimiro el Santo (Duque de Kiev):
Vladimir I, in full VLADIMIR SVYATOSLAVICH, byname SAINT VLADIMIR, or VLADIMIR THE GREAT, Russian SVYATOY VLADIMIR, or VLADIMIR VELIKY (b. c. 956, Kiev, Kievan Rus [now in Ukraine]--d. July 15, 1015, Berestova, near Kiev; feast day July 15), grand prince of Kiev and first Christian ruler in Kievan Rus, whose military conquests consolidated the provinces of Kiev and Novgorod into a single state, and whose Byzantine baptism determined the course of Christianity in the region.

Vladimir was the son of the Norman-Rus prince Svyatoslav of Kiev by one of his courtesans and was a member of the Rurik lineage dominant from the 10th to the 13th century. He was made prince of Novgorod in 970. On the death of his father in 972, he was forced to flee to Scandinavia, where he enlisted help from an uncle and overcame Yaropolk, another son of Svyatoslav, who attempted
to seize the duchy of Novgorod as well as Kiev. By 980 Vladimir had consolidated the Kievan realm from Ukraine to the Baltic Sea and had solidified the frontiers against incursions of Bulgarian, Baltic, and Eastern nomads.

Although Christianity in Kiev existed before Vladimir's time, he had remained a pagan, accumulated about seven wives, established temples, and, it is said, taken part in idolatrous rites involving human sacrifice. With insurrections troubling Byzantium, the emperor Basil II (976-1025) sought military aid from Vladimir, who agreed, in exchange for Basil's sister Anne in marriage. A pact was
reached about 987, when Vladimir also consented to the condition that he become a Christian. Having undergone baptism, assuming the Christian patronal name Basil, he stormed the Byzantine area of Chersonesus (Korsun, now part of Sevastopol) to eliminate Constantinople's final reluctance. Vladimir then ordered the Christian conversion of Kiev and Novgorod, where idols were cast into
the Dnieper River after local resistance had been suppressed. The new Rus Christian worship adopted the Byzantine rite in the Old Church Slavonic language. The story (deriving from the 11th-century monk Jacob) that Vladimir chose the Byzantine rite over

the liturgies of German Christendom, Judaism, and Islam because of its transcendent beauty is apparently mythically symbolic of his determination to remain independent of external political control, particularly of the Germans. The Byzantines, however, maintained ecclesiastical control over the new Rus church, appointing a Greek metropolitan, or archbishop, for Kiev, who functioned both as legate of the patriarch of Constantinople and of the emperor. The Rus-Byzantine religio-political integration checked the influence of the Roman Latin church in the Slavic East and determined the course of
Russian Christianity, although Kiev exchanged legates with the papacy. Among the churches erected by Vladimir was the Desyatinnaya in Kiev (designed by Byzantine architects and dedicated about 996) that became the symbol of the Rus conversion. The Christian Vladimir also expanded education, judicial institutions, and aid to the poor.

Another marriage, following the death of Anne (1011), affiliated Vladimir with the Holy Roman emperors of the German Ottonian dynasty and produced a daughter, who became the consort of Casimir I the Restorer of Poland (1016-58). Vladimir's memory was kept alive by innumerable folk ballads and legends.

Vladimiro I el Santo (* 956 - 1015), principe de Novgorod desde 978 y gran duque de Kiev desde 988.

El príncipe Vladimiro el I Santo, de Kiev, es bautizado en 988 según el rito ortodoxo y obtiene el título de gran duque. Su conversión al cristianismo trae consigo, al parecer, el bautismo multitudinario del pueblo en el Dniéper.

En Kiev se procede a la destrucción de centros de culto e ídolos paganos, y arquitectos bizantinos construyen una iglesia dedicada a la Madre de Dios, a la que Vladimiro asigna la décima parte de los ingresos totales del principado.

Kiev conserva su autonomía frente a Bizancio, y se convierte en el centro evangelizador de Rusia, aunque siga dependiendo canónicamente de Bizancio
Su bautismo en 988 significó el comienzo de la cristianización de Rusia.

La muerte de Vladimiro desencadena sangrientas luchas entre sus cinco hijos con derecho a la sucesión.

Vladimir, Saint (circa 956-1015), grand prince of Kyyiv, whose baptism made Orthodox Christianity the official religion of Russia. Born in Kyyiv, Vladimir was a pagan at the beginning of his reign, which was at first devoted to consolidating his territories into a unified Russian state. In exchange for helping the Byzantine emperor Basil II suppress a rebellion, Vladimir was allowed to marry the emperor's sister, Anne, at which time (988) he accepted Christianity. Allied to Byzantium by religious and family ties, Vladimir introduced Byzantine civilization into Russia by building churches, suppressing paganism, and making social reforms. Nonetheless, he remained open to Western influences, which are reflected in his legislation.

Vladimir the Great

The empire was divided among the prince's three sons, causing dynastic conflicts that were ended in 980, when the youngest son, Vladimir I (see Vladimir, Saint), later known as Vladimir the Great, became sole ruler. The most significant event of his reign was his conversion to Byzantine Christianity in 988 and the institution of that religion as the official religion of the Russian people. After casting off his several pagan wives, he married Anne, sister of the Byzantine emperor Basil II. From its inception, the Russian Orthodox church differed from its Byzantine parent. Services were offered in liturgical Slavonic, and the church enjoyed a large measure of autonomy, even though it remained under the canonical authority of the patriarch of Constantinople and the Russian ruler was in fact its supreme head. Monasteries and churches were built in Byzantine style, however, and Byzantine culture ultimately became the predominant influence in such fields as architecture, art, and music.

Notes for Bermudo II El Gotoso (Rey de León y Asturias):
Vermudo II o Bermudo II (956-999), rey de León (984-999). Hijo de Ordono III (951-956), se alzó contra el rey leonés Ramiro III (966-984). Apoyado por los magnates gallegos y portugueses, se proclamó nuevo rey en el ano 982, ejerciendo como tal en Galicia y Portugal. Ya como rey de León, la pujanza de Castilla, condado independiente bajo el mando de Garcka I Fernindez (970-995), y las rebeliones internas del reino le empujaron a ponerse bajo la tutela del califato cordobés, cuya dirección militar estaba en manos de Almanzor. A cambio de esta sumisión, consiguió recuperar la ciudad de Zamora. Sofocadas las rebeldkas internas, comenzó un periodo de enfrentamientos con los musulmanes que provocó numerosas despoblaciones y una importante crisis económica. Entre los anos 985 y 997, Almanzor devastó Coimbra, León, Zamora y Sahagsn, entre otras localidades, llegando incluso hasta Santiago de Compostela.

Notes for Hugh Capet, King Of France:
Hugh CAPET, French HUGUES CAPET (b. c. 938--d. Oct. 14, 996, Paris), first of a direct line of 14 Capetian kings of France; his control over vast estates in the regions of Paris and Orléans assured his election to the throne in 987 by the assembly of Frankish magnates.

Inheriting the title duke of the Franks from his father, Hugh the Great, in 956, Hugh Capet unsuccessfully tried to control Aquitaine in 970. From 978 to 986 he was allied with the German emperors Otto II and Otto III, and with Adalbero, archbishop of Reims, in political intrigues against the Carolingian king Lothair. By 985 Hugh was actually the ruler in all but title; and, after the brief reign of Lothair's son, Louis V (986-987), he was elected king in May 987. Adalbero was able to convince the Frankish magnates that the crown was elective rather than hereditary and that Charles of Lorraine, the only legitimate Carolingian contender, was unfit to rule. Hugh was crowned at Noyon on July 5, 987. Scholars are generally agreed that Hugh's election was not a revolutionary action. His grandfather Robert I, his great-uncle Eudes, and his uncle Rudolf (Raoul) had all earlier been non-Carolingian kings.

Hugh's reign was marked by the unavailing efforts of Charles of Lorraine (imprisoned 991) to assert himself and by continual conflict between Eudes I,

count of Blois, and Fulk Nerra of Anjou, whom Hugh later supported. In 993 Eudes was aided by the Bishop of Laon in an unsuccessful conspiracy to deliver Hugh and his son Robert over to Otto III. That no one was punished for the incident indicated the weakness of the new Capetian dynasty. Hugh's crown was probably preserved by the inability of his enemies to coordinate their activities against him. He assured the succession to his son, Robert II, by having him crowned on Christmas day, 987.

BRITANICA

Capetian DYNASTY, the ruling house of France from 987 to 1328, during the feudal period of the Middle Ages. By extending and consolidating their power, the Capetian kings laid the foundation of the French nation-state.

The Capetians all descend from Robert the Strong (died 866), count of Anjou and of Blois, whose two sons, usually styled Robertian rather than Capetian, were both crowned kings of the Franks: Eudes in 888, Robert I in 922. Though Robert I's son Hugh the Great restored the Carolingian dynasty in 936, his son Hugh Capet (q.v.) was elected king in 987, thus removing the Carolingians forever.

The 13 kings from Hugh Capet to the infant John I, who succeeded one another from father to son, and John I's two uncles, Philip V and Charles IV (d. 1328), are designated as the Capetians "of the direct line." They were followed by the 13 Capetian kings of the House of Valois (see Valois dynasty). Of these, seven kings (from Philip VI to Charles VIII) succeeded from father to son, after whom Louis XIII began the House of Valois-Orléans, continued in the branch of Valois-Orléans-Angoulzme (five kings from Francis I to Henry III) until 1589. Then the Capetians of Bourbon succeeded (see Bourbon, House of).

Hugh Capet's rule was limited to his own domain around Paris, while the rest of the French kingdom was in the hands of powerful local lords. His direct successors gradually increased the territory over which they had control through conquest and inheritance and also by skillfully exploiting their rights as suzerains in areas not under their direct authority. Under the Capetians, many of the basic administrative institutions of the French monarchy, including Parlements (royal law courts), the States General (representative assembly), and the baillis (royal local officials), began to develop.

Among the most notable of the Capetians was Philip II Augustus (reigned 1180-1223 as "king of France" rather than "king of the Franks"), who wrested from the Angevin rulers of England much of the empire that they had built up in western France. Another notable Capetian was Louis IX, or Saint Louis (reigned 1226-70), whose devotion to justice and saintly life greatly enhanced the
prestige of the monarchy.

Apart from the French kings, there were in the Middle Ages two lines of Capetian dukes of Burgundy (1032-1361 and 1363-1477); the Capetian House

of Dreux, a line of dukes of Brittany (1213-1488); three Capetian emperors of Constantinople (1216-61), of the House of Courtenay; various counts of Artois (from 1237), with controversial succession; the first Capetian House of Anjou, with kings and queens of Naples (1266-1435) and kings of Hungary (1310-82); the House of Évreux, with three kings of Navarre (1328-1425); the second Capetian
House of Anjou, with five counts of Provence (1382-1481); and other lesser branches.

Notes for Borrell II (Conde de Barcelona):
Borrell II, (947-992) Conde de Barcelona. Se niega a marchar a Aquitania, donde debe rendir homenaje al nuevo monarca franco, Hugo Capeto. La actitud del conde barcelonés supone el inicio de la independencia polktica de hecho del condado. Es la culminación de un largo proceso para separar la Marca Hispinica del control franco, aprovechindose de la debilidad de los ultimos monarcas carolingios que habkan, dejado el poder en manos de Hugo Capeto.

CRONICA DE LA HUMANIDAD Pg 276

Soon after the Islamic invasion, fleeing Visigothic nobles and the mountaineers of Asturias, under theleadership of Pelayo (718-737), a Gothic lord, united in

opposition to the invader. Later generations acclaimed Pelayo's victory over the Muslims at Covadonga, about 718, as the beginning of the Reconquest and the "salvation of Spain." Alfonso I (739-757) expanded the Asturian kingdom by occupying Galicia after the withdrawal of rebellious Berbers garrisoned there. He also devastated the Duero River valley to the south, thus creating a no-man's-land between Christian and Islamic Spain. The Basques apparently recovered their independence in the western Pyrenees, while the Franks drove the Muslims from Septimania (southwestern France) and moved into northeastern Spain. Although Charlemagne failed to take Saragossa (Saraqustah) in 778, his troops captured Barcelona in 801 and occupied Catalonia. Later known as the Spanish March, this region consisted of several counties under Frankish rule and long maintained strong political and cultural connections first to the Carolingian empire and then to the kingdom of France. Thus for several centuries the Catalans looked to the north.

The Asturians, on the other hand, turned to the south. After advancing his chief seat to Oviedo, Alfonso II (791-842) tried to recreate Visigothic institutions there. In the late 9th century Alfonso III (866-910) took advantage of internal disorders in Islamic Spain to plunder enemy territory and to seize notable strongholds such as Porto. He also initiated the repopulation of the lands reaching southward to the Duero that had been deserted for about a century. His construction of numerous castles to defend his eastern frontier against Muslim assaults gave that area its distinctive character and thus its name, Castile. During this time the earliest known Christian chronicles of the Reconquest were written, and they deliberately tried to demonstrate the historical connection between the Visigothic and Asturian monarchies. Portraying themselves as the legitimate heirs of Visigothic authority and tradition, the Asturians self-consciously declared their responsibility for the Reconquest of Islamic Spain.

Asturian leadership did not go unchallenged, however: King Sancho I Garcés (905-926) began to forge a strong Basque kingdom with its centre at Pamplona in Navarre, and Count Wifred of Barcelona (873-898), beginning to assert his independence from the Franks, extended his rule over several small Catalan counties. His descendants were to govern Catalonia until the 15th century.

The apparent weakness of Islamic Spain and the growth of the Asturian kingdom encouraged Garcka I (910-914) to transfer the seat of his power from Oviedo southward to the city of León. Nevertheless, any expectation that Islamic rule was about to end was premature. During the 10th century the caliphs of Cordova (Qurtabah) not only restored order and unity in Islamic Spain but also renewed their raids on the Christian north. The Christians suffered great destruction but
occasionally gained some victories. The triumph of Ramiro II (931-951) over the great caliph 'Abd ar-Rahman III at Simancas in 939 was extraordinary, but within his own dominions Ramiro encountered increasing hostility from the Castilians. As a frontier people hardened by exposure to the dangers of daily Islamic raids, they were disinclined to bow to Leonese tradition and law. Fernin Gonzilez (c. 930-970), the count of Castile, defied Ramiro and established the foundations

for the later independence of Castile.

In the later 10th century, as Islamic power steadily increased, the Christians suffered a corresponding decline. As ambassadors representing Ramiro III of León (966-984), Sancho II of Navarre (970-994), Count Borrell II of Barcelona (c. 940-992), and Garcka Fernindez, Count de Castile (970-995), made their way to Cordova to pledge homage and to pay tribute to the caliph, the abject status of the Christian rulers was manifest for all to see. Yet, despite their acknowledgement of Islamic power, the Leonese kings, adhering to Asturian custom, continued to assert their rights as heirs to the Visigothic tradition. Their claim to domination over the entire peninsula was now expressed in the idea of a Hispanic empire centred at León. As the century drew to a close, the imperial idea surely offered some comfort when al-Mansur (Almanzor), who exercised dictatorial authority in the caliph's name, regularly ravaged all the Christian states. His semiannual plundering expeditions in the north not only brought many slaves to Cordova but also helped to divert the Muslims from his usurpation of power. After defeating Count Borrell in 985, he burned Barcelona and three years later plundered León; in 997 he sacked the great Christian shrine
of Santiago de Compostela. After al-Mansur's death, however, the caliphate of Cordova disintegrated.

Delivered from the Islamic scourge that threatened to destroy them, the Christian states were able to breathe easily again. The ensuing civil wars among the Muslims enabled Ramon Borrell, count of Barcelona (992-1018), to avenge past affronts by sacking Cordova in 1010. Alfonso V of León (999-1028) took advantage of the situation to restore his kingdom and to enact the first
general laws for his realm in a council held at León in 1017. Once the Islamic danger seemed removed, the Christian rulers resumed old quarrels. Sancho III the Great, king of Navarre (1000-35), was able to establish an undisputed ascendancy in Christian Spain for some years. As communication with the lands of northern Christendom increased, French influence grew ever stronger. French pilgrims trod the newly developing route to Compostela; monastic life was
reformed according to the Cluniac observance; and feudal ideas and customs altered the life of the nobility. Already in control of the counties of Aragon, Sobrarbe, and Ribagorza, and including Count Berenguer Ramon I of Barcelona (1018-35) among his vassals, Sancho III continued his aggrandizement by overrunning the county of Castile and challenging Bermudo III of León
(1028-37). Sancho completed his triumph by seizing the city of León and taking the title of emperor in 1034, but his death the next year brought an end to the unity he had imposed.

Notes for Umberto I "Bianca Mano", Count Of Avata:

HOUSE OF SAVOY

Italian SAVOIA, French SAVOIE, historic dynasty of Europe, the ruling house of Italy from 1861 to 1946. During the European Middle Ages the family acquired considerable territory in the western Alps where France, Italy, and Switzerland now converge. In the 15th century, the house was raised to ducal status within the Holy Roman Empire, and in the 18th century it attained the royal title (first of the kingdom of Sicily, then of Sardinia). Having contributed to the movement for Italian unification, the family became the ruling house of Italy in the mid-19th century and remained so until overthrown with the establishment of the Italian Republic in 1946.

The founder of the house of Savoy was Humbert I the Whitehanded (Mano Bianca), who held the county of Savoy and other areas east of the Rhone River and south of Lake Geneva and who was probably of Burgundian origin. His successors during the Middle Ages gradually expanded their territory. Amadeus V (reigned 1285-1323) introduced the Salic Law of Succession and the law of primogeniture to avoid any future partition of the family's dominions between

various members. Amadeus VI (reigned 1343-83) enlarged and further consolidated their territory, and under Amadeus VII (reigned 1383-91) the port of Nice was acquired. Under Amadeus VIII (reigned 1391-1440), Piedmont, on the Italian side of the Alps, was definitely incorporated (after having belonged for nearly two centuries to a branch of the house). Amadeus VIII was granted the title of duke in 1416.

During the latter 15th and early 16th centuries, the importance of the house declined under a series of weak rulers, culminating in a French occupation of Savoy (1536-59). In 1559, however, Emmanuel Philibert (reigned 1553-80) was able to recover most of Savoy under the terms of the Peace of Chateau Cambrésis. During the next century, the dukes of Savoy pursued a policy of territorial aggrandizement and, for the most part, maintained an independent role in international affairs by maneuvering between the two major opposing powers, France and the Habsburgs. Although its lands were under French domination during the second half of the 17th century, Savoy emerged from the long period of international wars with major gains. By the Treaty of Utrecht (1713), Victor Amadeus II (reigned 1675-1730) was raised in 1713 from duke to the status of a king as ruler of Sicily; in 1720 he exchanged Sicily for Sardinia. He and his
successors also acquired important territory in northeastern Italy. During the French Revolutionary and Napoleonic Wars (1792-1815), only Sardinia remained free of French control, but in 1815, Victor Emmanuel I (reigned 1802-21) added Genoa to the family's holdings.

At the beginning of the Risorgimento, the territory of the house of Savoy, centred on Piedmont, was unique among Italian states for its freedom from foreign influence and for its relative military strength. A liberal revolution in 1821 forced Victor Emmanuel I to abdicate in favour of his brother, Charles Felix. On the death of the latter in 1831, Charles Albert, of the Carignano branch of the family, obtained the throne. He contributed to the cause of unification under Piedmont's leadership by modernizing his government (granting a constitution in 1848) and fighting against Austrian power in Italy in the First War of Independence of 1848-49. Under his son Victor Emmanuel II (reigned 1849-1878, king of Italy from 1861), who supported Piedmont's prime minister, Count Cavour, in the diplomatic maneuvering immediately before unification, the Kingdom of Italy was formed with the house of Savoy at its head.

In the new state the role of the monarch lost its former prominence as a parliamentary system of government evolved. The king was in a pivotal position only in times of crisis. Umberto I succeeded his father as king of Italy in 1878 and reigned until his own death in 1900. Victor Emmanuel III (reigned 1900-46), who remained as figurehead king during the Fascist regime, abdicated in 1946, at the end of World War II, in favour of his son Umberto II in an attempt to save the monarchy, but the Italian people voted in a referendum of June 2, 1946, for a republic, ending the rule of the house of Savoy.

Notes for II Edmund, King Of England (1016):
Edmund II, byname EDMUND IRONSIDE (b. c. 993--d. Nov. 30, 1016), king of the English from April 23 to Nov. 30, 1016, surnamed "Ironside" for his staunch resistance to a massive invasion led by the Danish king Canute.

The son of King Ethelred II the Unready (reigned 978-1016), Edmund defied his father's orders by marrying (1015) the widow of one of the Danish lords then occupying English territory. Nevertheless, when Canute invaded England later in 1015, Edmund raised an army in northern England and ravaged regions that would not rally to his cause.

Upon Ethelred's death (April 1016), a small number of councillors and citizens of London proclaimed Edmund as their ruler, but a larger body of nobles at Southampton declared for Canute. Edmund then launched a series of offensives against his rival. He recovered Wessex and relieved London of a siege before being decisively defeated by Canute at Ashington, Essex, on October 18.
In the ensuing peace settlement, Edmund retained Wessex, while Canute held the lands north of the River Thames. After Edmund died (probably of natural causes), Canute became sole ruler of England.

Notes for III Fulk, 5Th Count Of Anjou:
Fulk III NERRA, byname FULK THE BLACK, French FOULQUES LE NOIR (b. c. 970--d. June 21, 1040, Metz, Fr.), count of Anjou (987-1040), the most powerful of the early rulers of the Angevin dynasty.

Exposed at first to the attacks of the counts of Brittany, Fulk had to fight for a long time to defend his frontiers, finally driving the Bretons back beyond the frontiers of Anjou. Having made himself master in the west, he turned his attention to the east and came into conflict with the count of Blois, Eudes II, over the territory of Saumur and a considerable part of Touraine. He defeated Eudes at Pontlevoy in 1016 and surprised and took Saumur 10 years later.

A ruthless warrior who burned and pillaged the monasteries in his path, Fulk nevertheless felt the need for penance, making three pilgrimages to the Holy Land and founding or restoring several abbeys, including those in or near Angers, Loches, and Saumur. He also built strongly fortified castles of stone (instead of wood) along the border of his territory. For this reason he was called le Grand Batisseur ("the Great Builder"). He died on his return from a pilgrimage to the Holy Land, having reigned 53 years.

Notes for IV Baldwin, Count Of Flanders:
Baldwin IV, byname BALDWIN THE BEARDED, French BAUDOUIN LE BARBU, Dutch BOUDEWIJN DE SCHONE BAARD (b. c. 980--d. May 30, 1035), count of Flanders (988-1035) who greatly expanded the Flemish dominions. He fought successfully both against the Capetian king of France, Robert II, and the Holy Roman emperor Henry II. Henry found himself obliged to grant to Baldwin IV in fief Valenciennes, the burgraveship of Ghent, the land of Waes, and Zeeland. The
count of Flanders thus became a feudatory of the empire as well as of the French crown. The French fiefs are known in Flemish history as Crown Flanders (Kroon-Vlaanderen), the German fiefs as Imperial Flanders (Rijks-Vlaanderen). Baldwin's son--afterwards Baldwin V--rebelled in 1028 against his father at the instigation of his wife Adela, daughter of Robert II of France; but two years later peace was sworn at Oudenaarde, and the old count continued to reign until his death.

Child of IV Baldwin and Ogive(otgive) is:

Notes for I Foucauld, S. De La Roche:
La Rochefoucauld FAMILY, one of France's noblest families, traceable in Angoumois to the year 1019. Ducal titles belonging to it are: duke (duc) de La Rochefoucauld (1622); duke de La Roche-Guyon (1679); duke d'Anville (1732); duke d'Estissac; duke de Liancourt (1747); duke de Doudeauville (1780); duke (duca) di Bisaccia (Neapolitan title; 1851); and duke (duque) de Estrées (Spanish title; 1892). Its two best-known members, Franeois VI, Duke de La Rochefoucauld, and Franeois-Alexandre-Frédéric, Duke de La Rochefoucauld-Liancourt, are the subjects of separate articles. The family's claim to princely privileges in France was urged without success in the mid-17th century, but the bearers of the Bisaccia title were granted princely rank in Bavaria in 1855.

Notes for Boleslaus III, Duke Of Poland:
Boleslaw III, byname BOLESLAW THE WRY-MOUTHED, Polish BOLESLAW KRZYWOUSTY (b. Aug. 20, 1085--d. Oct. 28, 1138), prince of Poland who introduced into his country the senioriate system, by which the eldest son received the major part of the royal inheritance. He also converted the Pomeranians to Christianity.

Son of Wladyslaw I Herman, ruler of Poland, and Judith of Bohemia, Boleslaw III and his illegitimate elder half brother, Zbigniew, each ruled a Polish province during their father's lifetime. Boleslaw III succeeded to his father's princely title (no Polish ruler assumed the title of king from 1082 to 1296) in 1102 and spent the next several years fighting Zbigniew for control of the country. After repelling an invasion of Silesia (1109) by the German king Henry V, Boleslaw, who had exiled Zbigniew in 1107, recalled him in 1112; soon, however, he accused Zbigniew of treason and had him blinded. Zbigniew died soon thereafter.

For the next 22 years (1113-35) Boleslaw sought control of Poland's former province of Pomerania; he conquered Eastern Pomerania in 1122 but did not secure Western Pomerania until he had sworn fealty to the Holy Roman emperor Lothair II in 1135. Boleslaw sent missionaries into Pomerania, converted the pagan tribes there to Christianity, and integrated the people into the Polish state. He then enacted legislation to secure Pomerania and Silesia for his eldest son and lesser provinces for his younger sons. The senioriate system, a halfway measure between primogeniture and equal distribution among all male heirs, was devised to satisfy all princely heirs; yet it caused dissension and eventually led to the disintegration of the state.

Notes for Bohemond I , Prince Of Antioch:
Bohemond I, byname BOHEMOND OF OTRANTO, French BOHÉMOND DE TARENTE, original name MARC (b. 1050-58--d. March 7, 1111, Canossa, Apulia [now Canosa di Puglia, Italy]), prince of Otranto (1089-1111) and prince of Antioch (1098-1101, 1103-04), one of the leaders of the First Crusade, who conquered Antioch (June 3, 1098).

Son of Robert Guiscard (the Astute) and his first wife, Alberada, Bohemond was christened Marc but nicknamed after a legendary giant named Bohemond. The nickname proved well taken because physically Bohemond was the ideally tall and strong knight--in the words of a contemporary, "a wonderful spectacle." His boyhood home was in southern Italy, where his Norman father, Robert, had gone as a mercenary and had risen to the rank of duke of Apulia and Calabria. Here Bohemond became involved in his father's wars and learned his trade as a fighter and leader. This early training must be inferred, however, as Bohemond's childhood is poorly recorded, and even his date of birth is unknown. In 1079 he was in command of a unit of his father's army. Meanwhile, his stepmother, Sigelgaita, bore his father's heir-to-be, Roger Borsa; thus, Bohemond no doubt felt early in life that he would have no patrimony because of his half brother and so would have to seek lands and fortune in the weakened condition of the
Byzantine Empire.

In 1081 Bohemond, in command of his father's army, captured Avlona, a town south of Durazzo; but in this same year Alexius I Comnenus became ruler of the Byzantine Empire and challenged the Normans. For more than three decades Alexius and Bohemond were rivals. In the opening struggle, 1081-85, Bohemond and his father came close to dismembering the Greek Empire in the West. The Norman army won a few brilliant victories, but Alexius drove Bohemond from Larissa in Thessaly in 1083, and the death of Robert in 1085 left Bohemond
without a patrimony and with little hope of success against Byzantium. In the next four years Roger Borsa allowed Bohemond to gain a foothold in Bari, where he awaited another chance to move against Alexius.

The chance came when Pope Urban II launched the First Crusade in November 1095 by offering rewards in both this world and the next for those who wrested the Holy Sepulchre from the Saracens. When the word reached Bohemond, he set off for the East. He and his small band of Normans crossed the Greek lands in the winter of 1096-97 with few incidents; and on passing

through Constantinople (Istanbul), he made friendly, though cautious, terms with the emperor Alexius. The latter managed to extract oaths from most of the leaders, including Bohemond, and helped them cross the Bosporus, speeding them with promises of aid if they would return to the sovereignty of the emperor the Byzantine lands recaptured from the Muslims. In the ensuing campaigns against the Turks, Bohemond distinguished himself at Nicaea, Dorylaeum, and Antioch, which was besieged from October 1097 until June 3, 1098. The city of Antioch fell to the crusaders through his cunning and his negotiations with a traitor. After a brief, unsuccessful countersiege by the Turks, during which Bohemond more or less assumed command, the crusaders dawdled away the summer and fall.

When the crusading army marched southward to Jerusalem in January 1099, Bohemond was left the de facto possessor of Antioch, although his claim was not openly supported for fear of violating the oath of Alexius. The Norman leader did not participate in the capture of Jerusalem but did, for the sake of appearances, journey later to the Holy Sepulchre. With the departure of many crusaders for their homelands, Bohemond was left with his city. It might seem in 1100 that
Bohemond was destined to found a great principality in Antioch; he had a fine territory, a good strategical position, and a strong army. But he had to face two great forces--the Byzantine Empire, which claimed the whole of its territories, and the strong Muslim principalities in the northeast of Syria. Between these two forces he failed. Following sorties against Aleppo, Bohemond made the mistake of moving against the emir of Sebastea (Sivas), north of Antioch. He fell into an ambush and was captured and held for months.

Released in 1103, he returned to Antioch and its problems. In 1105 Bohemond was in Bari to enlist reinforcements for his struggle with the Byzantines. In September 1105 he went to Rome to interview the pope and then journeyed, early in 1106, through France. There, babies were named for him, crowds heard him denounce the perfidious Alexius, and shrines received sacred relics from his hands. In the spring of 1106 Bohemond married Constance, the daughter of Philip I of France.

Bohemond, who 30 years before had been a landless young man, now stood at the pinnacle of his career. By September 1107 he was ready to launch his crusade against the Byzantines and within a month had landed a large army at Avlona. In the months that followed, Durazzo held firm against the Normans, and Bohemond met with misfortune in Albania. In this impasse Alexius, anxious to
end the war, offered Bohemond Antioch and other Greek cities in return for vassalage. In accepting these terms, Bohemond suffered humiliation even though he retained control of Antioch. He had used the crusade against Alexius to further his ambition for an empire that stretched from Apulia to Antioch and had thereby cheapened the crusading idea.

The years following this peace of discord are poorly recorded. Constance bore Bohemond two sons, one of whom later became prince of Antioch. Bohemond probably sought to raise another army, but these efforts were curtailed by his

death in 1111. His combat with the Byzantines was ended, and his rival Alexius followed him in death in 1118. Nicknamed for a giant, Bohemond had fought against gigantic odds and at death bequeathed to his heirs one of the important crusader states, the principality of Antioch. History records him as a handsome man, a warrior of genius, and a gifted diplomat.

Notes for Baldwin II, King Of Jerusalem:
Baldwin II, byname BALDWIN OF BOURG, French BAUDOUIN DU BOURG (d. August 1131, Jerusalem), count of Edessa (1100-18), king of Jerusalem (1118-31), and crusade leader whose support of the religious-military orders founded during his reign enabled him to expand his kingdom and to withstand the attacks of Seljuq Turks.

A son of Hugh, count of Réthel, in the Ardennes region of France, he held the castle of Bourg as a feudal domain and was at first referred to as Baldwin du Bourg. He accompanied his cousins Godfrey of Bouillon and Baldwin (later King Baldwin I of Jerusalem) to Palestine with the First Crusade (1096). In 1100 he was named count of Edessa (now Urfa, Tur.) by Baldwin I when the latter became king of Jerusalem. The Seljuq Turks moved against Edessa in 1104, capturing
Baldwin on May 7. Ransomed in 1108, he fought his way into Edessa to reclaim his principality from the regent, Tancred, and later recovered most of the lost territory.

On April 14, 1118, Baldwin was crowned king of Jerusalem. Though captured by the Turks and held hostage from 1123 until 1124, in subsequent years he succeeded in expanding his territory and directing attacks against Muslim Damascus with the aid of the Hospitalers and the Templars, crusading religious-military orders. Having had only daughters from his Armenian wife, Morfia, Baldwin gave his daughter Melisend in marriage to Fulk V, count of Anjou and Maine, in 1129 and named them as his successors.

Kingdom of Jerusalem.

A state formed in 1099 from territory in Palestine wrested from the Muslims by European Christians during the First Crusade and lasting until 1291, when the two surviving cities of the kingdom succumbed to attacks by Muslim armies.

The rulers of the neighbouring crusader states of Antioch, Edessa, and Tripoli were the king of Jerusalem's vassals; in return for their loyalty and military service, he provided them with aid and protection. The kingdom proper, which corresponded roughly to present Israel, southern Lebanon, and southwestern Jordan, included four great baronies: the county of Jaffa and Ascalon, the lordship of Krak or Montréal, the principality of Galilee, and the lordship of Sidon. Jerusalem and its surrounding territory plus the cities of Tyre (Sur, Leb.) and Acre ('Akko, Israel) composed the royal domain. Though fiefs tended to become hereditary, kings often had to intervene to settle succession disputes and to enforce the Assizes of Jerusalem, the code of law upon which the government of the kingdom was based.

Economically, the kingdom was not wealthy, depending on trade with the Muslims, banking activities, and taxes on pilgrims to keep the government operating and to provide for defense. Though there were some fertile districts, much was barren, and in bad years grain had to be imported from Syria to feed the Christians.

The early kings of Jerusalem, Baldwin I (reigned 1100-18) and Baldwin II (1118-31), secured the kingdom by capturing the coastal towns and building new fortifications to safeguard the interior of Palestine and the northern territories. Subsequently, the kings tried to expand into the south, abandoning the earlier policy and indirectly contributing to the Muslim conquest of Edessa (1144). When the Second Crusade (1147) failed, the Muslims began to strengthen their position. King Amalric I (reigned 1163-74) directed attacks against Egypt, and his failures contributed to the rise of the Muslim leader Saladin (reigned 1169-93), who succeeded in uniting the previously divided Muslim world in a massive attack on the Holy Land. Saladin's armies overran the city of Jerusalem in 1187, and, despite some territorial recovery made by the Third Crusade (late 12th century), the city remained in Muslim hands. With the fall of Jerusalem, the kings made Acre the capital of their kingdom, and there they watched the slow erosion of their territory throughout the 13th century, despite the efforts of new expeditions from Europe to regain lost ground.

Driven from the Asian mainland in 1291, the ruling house of Lusignan retreated to the island of Cyprus, which its members ruled until the late 15th century, still claiming the title king of Jerusalem.

Notes for I Henry, King Of France:
Henry I (b. c. 1008--d. Aug. 2, 1060, Vitry-aux-Loges, France), king of France from 1026 to 1060 whose reign was marked by struggles against rebellious vassals.

The son of Robert II the Pious and grandson of Hugh Capet, founder of the Capetian dynasty, Henry was anointed king at Reims (1026) in his father's lifetime, following the death of his elder brother Hugh. His mother, Constance, however, favoured his younger brother Robert for the throne, and civil war

broke out on King Robert II's death (1031). The younger Robert was given Burgundy
in 1032, after Henry had sought refuge with Robert, Duke of Normandy. From 1033 to 1043 Henry struggled with his feudatories, notably Eudes of Blois and his brother Robert. In 1055, as the result of an agreement made by Robert II, the county of Sens came to the crown as the sole territorial gain of Henry's reign.

Notes for Ramiro I el Bastardo (Rey de Aragón):
Nacimiento del reino de Aragón

Ramiro, un hijo bastardo de Sancho III de Pamplona, recibió el condado de Aragón. Se le ha considerado el primer rey de dicho territorio, pues aunque estaba supeditado a su hermano Garcka, rey de Pamplona, luchó lo indecible para consolidar la independencia de Aragón. Es posible, no obstante, que no utilizara expresamente el tktulo regio. Por otra parte la temprana muerte de su

hermano Gonzalo, que habka recibido los senorkos de Sobrarbe y Ribagorza, le permitió asimismo incorporar esos dominios (1044). El reino de Aragón de mediados del siglo XI limitaba al oeste con el reino de Pamplona, al este con el condado de Urgel y al sur con el reino taifa musulmin de Zaragoza. El hijo y sucesor de Ramiro I, Sancho Ramkrez, aprovechó la vacante que se produjo en el trono navarro en el ano 1076 para ser reconocido como rey de aquel territorio. De esa manera Aragón y Navarra volvkan a unirse, aunque en esta ocasión las dos entidades polkticas ostentaban el mismo tktulo, pues ambos eran reinos.
Sancho Ramkrez hizo de la ciudad de Jaca el centro polktico de su reino a la vez que uno de los hitos de la ruta de los peregrinos que se encaminaban desde Francia, a través de los Pirineos, a Santiago de Compostela (el conocido como Camino de Santiago). Sancho Ramkrez, por otra parte, impulsó la Reconquista aragonesa, llevando a cabo una espectacular campana, organizada con aire de cruzada, sobre Barbastro (1064), aunque al poco tiempo se perdió dicha plaza. Anos mis tarde conquistó Graus (1083) y Monzón (1089), aunque murió en el asedio de Huesca (1094). Pero fue su hijo y sucesor Pedro I el que alcanzó los principales éxitos militares, al conquistar Huesca (1096), tras vencer a los musulmanes en la batalla de Alcoraz, y Barbastro (1110), esta vez con caricter definitivo. En apenas unas décadas Aragón habka conseguido duplicar su extensión territorial, al ganar la denominada Tierra Nueva, ubicada en el Prepirineo. Allk permaneció una parte de su antigua población musulmana, pero también llegaron repobladores, bisicamente procedentes de las zonas montanosas del norte.

Ramiro I (de Aragón) (c.1000-1063), primer rey de Aragón (1035-1063). Hijo natural de Sancho III el Mayor de Pamplona, recibió el condado de Aragón, dependiente de su hermano Garcka IV Sinchez III, rey de Navarra, pero adoptó el tktulo regio. Anos después, aliado con los taifas musulmanes de Zaragoza, Huesca y Tudela, atacó a su hermano y rey navarro Garcka (1043), pero fue derrotado cerca de Tafalla. A la muerte de su hermanastro Gonzalo, incorporó los condados de Sobrarbe y Ribagorza (1044). Procuró fortalecer la frontera meridional de su reino, creando para ello diversas tenencias, en la sierra de Guara y en varios valles fluviales. Posteriormente atacó al taifa de Zaragoza, ocupando la localidad de Benabarre, pero el musulmin, auxiliado por Castilla, derrotó y dio muerte a Ramiro I en la localidad oscense de Graus.

Notes for Pelayo Peliez:
APELLIDO PELIEZ

Su origen, historia y hechos.

Este apellido es un patronkmico derivado del nombre propio Pelayo, ya que se cuenta de él, que viene del tiempo de los godos y que algunos caballeros ask llamados, estuvieron con el invicto caudillo don Pelayo, en su refugio de las montanas en Covadonga. Lo que sk parece cierto es que desde un comienzo, los de este linaje tomaron una parte muy activa en la guerra contra los moros invasores de la Penknsula Ibérica.

Basindonos en la "Enciclopedia Herildica y Genealógica" de Garcka Garrafa, obtenemos el dato de que, en el siglo VIII ya eran muchas las familias que utilizaban el apellido Peliez y que continuaron difundiéndolo por Castilla, León, Asturias y Galicia. El citado genealogista, indica, con mucho acierto, que serka pricticamente imposible estudiar las todas.

Dice el genealogista de referencia que, acontece con el apellido Peliez lo mismo que con los restantes patronkmicos, esto es, que lo llevan y lo han llevado familias de muy distinta cuna, sin vknculos de sangre ni de parentesco, y tratar de conocer la ascendencia de cada una de ellas, su solar y su tronco, impondrka investigaciones muy largas y difkciles sin probabilidades de éxito. Por tanto, seguiremos sus informaciones, en lo que podrkamos denominar, una lknea general para todo el linaje. Se tiene por el mis antiguo solar de la familia Peliez, el que radicó en un lugar llamado Villademós, del Concejo de Valdés, partido judicial de Luarca,siendo, por tanto un linaje claramente asturiano. Dice el genealogista que hemos citado antes, que se trataba de una torre alta, fuerte y cuadrada, con troneras y saeteras, puente levadizo y plataforma almenada con foso y contrafoso, que mis tarde fueron cegados.

El padre Carballo, en su libro "Linajes y Casas de Asturias", se refiere a los servicios que prestaron los duenos de dicha Torre, afirmando que el caballero que la poseka en los tiempos de la Reconquista se llamaba PELAYO PELIEZ, y que con cuatrocientos hombres, todos vasallos suyos, acudió valerosamente en ayuda del rey don Pelayo y al llegar a Cornallana vino a dar con tres mil moros que hukan hacia Galicia, y sostuvo con ellos un fuerte combate, que finalizó con la total derrota de los sarracenos. Se sigue contando la historia de este linaje basindose en una antigua tradición que dice que el caballero Peliez, que poseka la Torre en tiempos del intruso rey Mauregato, siguió el partido de los legktimos reyes asturianos. Se llamaba Diego Peliez y se opuso, con sus gentes, a todos los moros que encontraba en su camino, defendiendo a toda costa el paso llamado Ricavo, entre los concejos de Valdés y Pravia.

Luego tuvo que pasar a Galicia y durante su forzada ausencia lo despojó de su Torre, Mauregato, que la entregó a sus leales. A su regreso, el citado Diego Peliez tornó a tomarla por la fuerza e hizo prisioneros a todas las gentes de armas que la defendkan, Pelayo Gutiérrez fue su descendiente y también Armkgero del rey Ramiro I, confirmando el voto de Santiago.

Por aquellos tiempos, y ahora tomamos como fuente de información al obispo Sebastiano, llegaron los normandos a las costas de Espana y en una de sus incursiones danaron gravemente la Torre de Peliez, ask como la iglesia de Santa Eufemia que estaba junto a ella. Anos después, los de la familia Peliez tornaron a reedificarla, morando en ella Munio Peliez. El conde Gonzalo Peliez fue caballero muy poderoso en Asturias y también fue de esta familia Fruela Peliez, que se encuentra sepultado en la iglesia vieja del convento de San Juan de Corias, a unas ocho leguas de la ya citada Torre de Peliez.

Pero hubo otras ramas asturianas de este linaje: Una de ellas radicó en el concejo de Somiedo, del partido judicial de Belmonte. Poseyó el senorko de Piramo de Fonceya, en la misma comarca, y como su progenitor aparece don Pelayo Fuela que casó con dona Aldonza Ordonez, que fue hija del infante don Ordono, "el Ciego", y de la infanta dona Cristina. Martkn Peliez es el famoso campeón "a quien el Cid de cobarde hubo buen caballero y muy esforzado" y que tras haberse mostrado muy tkmido en la guerra, salió después uno de los mis valerosos capitanes que siguieron al invicto Rui Dkaz de Vivar.

Otra casa de Peliez tuvo su principal asentamiento en el concejo de Llanera, del partido judicial de Oviedo, del que era tronco, a principios del siglo XVII, Toribio Peliez. Y otra familia de este mismo apellido, radicada en Asturias, tuvo su morada en la Parroquia de Vilona, del partido judicial de Infiesto. Algunos de sus miembros hicieron probanza de hidalguka y limpieza de sangre ante la Real Chancillerka de Valladolid.

Hubo muchas mis familias de este linaje, radicadas en Asturias. Serka muy largo extenderse detallindolas. Una rama estuvo ubicada en la parroquia de Borines, en el lugar de Valloval, del concejo de Pilona y fue precisamente de esta rama de la que pasó una lkneа a las Antillas, residiendo en Puerto Rico para trasladarse después a La Habana.

Otra familia, estuvo en el lugar de Santiago junto a Tudela de Vegukn, en el partido judicial de Oviedo, con lkneas en Castilia la Vieja, Toledo y Andalucka. Otro moró en la villa de Gozón, del partido judicial de Avilés. Se apellidó Peliez de la Pola.

Las armas de este linaje que figuran esculpidas en una de las veintiséis urnas sepulcrales incrustadas en la capilla de los Reyes, Condes e Ilustres varones del Monasterio de San Pedro de Cardena, sito en la provincia de Burgos, y que guardaba los restos del caballero asturiano Martkn Peliez, deudo de don Rodrigo Dkaz de Vivar, "el Cid", son estas: En campo de gules, un brazo armado de plata, moviente del flanco siniestro y empunando una espada del mismo metal con la punta hacia el jefe.

Notes for Conrado II (Emperador Romano Germinico):
Conrado II el Silico
Conrad II (b. c. 990--d. June 4, 1039, Utrecht, Ger., Holy Roman Empire), German king (1024-39) and Holy Roman emperor (1027-39), founder of the Salian dynasty. During his reign, he proved that the German monarchy had become a viable institution. Since the survival of the monarchy was no longer primarily dependent on a compact between sovereign and territorial nobles, it was henceforth invulnerable to prolonged rebellion on their part.

Conrad was the son of Count Henry of Speyer, who had been passed over in his inheritances in favour of a younger brother. Henry was descended, through the marriage of his great-grandfather Conrad the Red to a daughter of Emperor Otto, from the Saxon house. Left poor, Conrad was brought up by the Bishop of Worms and did not receive much of a formal education; but, conscious of the deprivations suffered by him and his father, he matured early. Prudent and firm, he often displayed great chivalry as well as a strong sense of justice, and he was determined to gain the status that fortune had denied him. In 1016 he married Gisela, the widowed duchess of Swabia and a descendant of Charlemagne. Conrad, however, was distantly related to Gisela. When strict canonists took exception to the marriage, Emperor Henry II, who was jealous of the growth of Conrad's personal influence, used their findings as an excuse for forcing Conrad into temporary exile. The two men later became reconciled, and, by the time Henry II died, in 1024, Conrad presented himself to the electoral assembly of the princes at Kamba on the Rhine as a candidate for the succession. After prolonged debates, the majority voted for him, and he was crowned king in Mainz on Sept. 8, 1024.

Intelligent and genial, Conrad was also fortunate. Soon after his election, even the minority opposition was persuaded to pay their homage. Early in the following year, the sudden death of Boleslaw I the Brave of Poland, a tributary to the German monarchy who had styled himself an independent king, spared Conrad the necessity of military interference. In Germany a rebellion fomented by nobles and relatives of Conrad was joined by many lay princes of Lombardy; and, although the Italian bishops paid homage at a court in Constance in June 1025, the lay princes sought to elect William of Aquitaine as antiking. But, when the King of France refused his support, the rebellion collapsed. Early in 1026, Conrad was able to go to Milan, where Archbishop Ariberto crowned him king of Italy. After brief fighting, Conrad overcame the opposition of some towns and nobles and managed to reach Rome, where he was crowned emperor by Pope

John XIX on Easter 1027. When a renewed rebellion in Germany forced him to return, he subdued the rebels and imposed severe penalties on them, not sparing members of his own family.

Conrad not only showed strength and incorruptible justice in maintaining his power but also displayed enterprise in legislation. He formally confirmed the popular legal traditions of Saxony and issued a new set of feudal constitutions for Lombardy. On Easter Sunday 1028, at an imperial court in Aachen, he had his son Henry elected and anointed king. In 1036 Henry was married to Kunigunde, the daughter of King Canute of England. Eventually, he became inseparable
from his father and acted as his chief counsellor. Thus, the succession was virtually assured, and the future of the new house looked bright.

In the meantime, Conrad had been compelled, after all, to campaign against Poland in 1028. After severe fighting, Mieszko--Boleslaw's son and heir--was forced to make peace and surrender lands that Conrad's predecessor had lost. Even so, Conrad had to continue to campaign in the east, and in 1035 he subdued the heathen Liutitians.

Although occupied intermittently in the east, Conrad was able to gain political triumphs in the west. Earlier, the childless king Rudolf of Burgundy had offered the succession to his crown to Emperor Henry II, who, however, died before Rudolf. Thus, when Rudolf died in 1032, he left his kingdom to Conrad over the opposition of the Burgundian princes, who two years later, on Aug. 1, 1034, paid homage to Conrad at Zürich.

Although Conrad's relations with his son remained close, King Henry at times showed independent initiative. He once concluded a separate peace with King Stephen of Hungary and on another occasion gave his oath to Duke Adalbero of Carinthia never to side against him. Thus, when Conrad fell out with Adalbero in 1035, Henry's oath severely strained relations between father and son. Conrad managed to overcome his son's partisanship only by humbling himself before him. In the end, Conrad's determination prevailed, and Adalbero was duly punished.

In 1036 Conrad appeared for a second time in Italy, where he proceeded with equal vigour against his old ally, Archbishop Aribert of Milan. Italy was rent by dissensions between the great princes, who, together with their vassals--the capitanei--had suppressed both knights and the burghers of the cities, the valvassores. Conrad upheld the rights of the valvassores, and, when Aribert, claiming to be the peer of the emperor, rejected Conrad's legislative interference,
Conrad had him arrested. Aribert managed to escape, however, and succeeded in raising a rebellion in Milan. Through luck and skillful diplomacy, Conrad succeeded in isolating Aribert from his Lombard supporters as well as from his friends in Lorraine. Conrad was thus able to proceed in 1038 to southern Italy, where he installed friendly princes in Salerno and Anversa and appointed the German Richer as abbot of Monte Cassino.

On his return to Germany the same year along the Adriatic coast, his army succumbed to a midsummer epidemic in which both his daughter-in-law and his stepson died. Conrad himself reached Germany safely and held several important courts in Solothurn (where his son Henry was invested with the kingdom of Burgundy), in Strassburg, and in Goslar. He fell ill during the following year (1039) and died.

Notes for Ramiro I (Rey de Asturias):
RAMIRO I (791 - 850) Reinó de 842 a 850 oponiéndose a la nobleza y rechazando las invasiones normandas. Una antiquksima tradición lo sitsa derrotando a los musulmanes, bajo la dirección del apóstol Santiago, patrono de Espana.
(n. h. 791-Oviedo, 850). Ocupó el trono de Asturias desde 842 a 850. Aplastó duramente las revueltas de los nobles y rechazó algunas incursiones que en sus dominios hicieron los normandos.

Ramiro I (842-850)
Hijo de Vermudo I y marido de Paterna. Aplastó las revueltas que se alzaron contra él. Se le conoció como vara de la justicia por el trato riguroso, incluso cruel que dispensó a sus opositores.

Notes for Ordono II (Rey de León y Asturias):
ORDONO II. Rey de Asturias y de León hijo segundo de Alfonso lll y nieto, por lo tanto, de Otdono I. m. en Zamota en Enero de 924. Tomó parte en la conspiración de sus hermanos y de su madre contra su padre, y cuando Alfonso III abdicó en favor de sus tres hijos (909), correspondieron i ORDONO los territorios de Galicia y Lusitania en que no dominsban los moros, contra los que peleó continuamente. A la muerte de su hermano mayor Garcka, rey de Asturias, los nobles y obispos eligieron i ORDONO II como sucesor suyo (Enero de 914), en perjuicio de los hijos que habka dejado Garcka, siendo muy

bien recibida la designación por el pueblo. ORDONO Il trasladó la corte de Oviedo a León que, ademis de estar mis en el centro te sus dominios, se hallaba ya defendida por la lknea de fortalezas del Duero, por lo que fue el primero de los reyes de León, tktulo que llevaron sus sucesores. Al igual que sus antecesores, su vida estuvo empleada por completo en luchas contra los musulmanes, sobre los que alcanzo la primera victoria importante hacia el ano 918 en los alrededores de San Esteban de Gormaz (Soria), siendo tantos, segsn el monje Silense, los cadiveres que allk dejó el enemigo, que quedaron cubiertos de ellos montes, bosques y collados. Posteriormente, en lugar y fecha que se ignoran, tuvo lugar otro encuentro entre los ejércitos cristianos y los musulmanes, pero esta vez los sltimos triunfaron en toda la lknea, aunque no pudieron sacar partido de la victoria, sin duda porque el califa de Córdoba estaba ocupado en otras guerras mis importantes para él, circunstancia que aprovechó ORDONO II para reaccionar vigorosamente y extenderse hasta las mirgenes del Guadiana, donde conquistó muchas poblaciones, un botin abundante y un nsmero incalculable de prisioneros, llegando hasta Lérida, formidablemente fortificada, cuyos habitantes le enviaron riquksimos presentes solicitando la paz. que ORDONO II aceptó, pues comprendia que no era ficil empresa la de apoderarse de la población. Hacia el ano 921 Abderrahmin III, libre ya de otros cuidados, invadió Galicia con un poderoso ejercito, y aunque ORDONO II pidió y obtuvo el auxilio de los reyes de Navarra, fué completamente derrotado. El musulmin entonces volvió las armas contra el de Navarra para castigarlo por la ayuda prestada i ORDONO II, y éste, agradecido y fiel i la palabra empenada, marchó al lado de su aliado invitando ademis, i algunos condes castellanos i que le siguiesen, pero sin resultado. Acudió, pues, ORDONO II con los suyos y en Navarra corrieron los cristianos la misrna suerte que antes en Galicia, siendo destrozados por las huestes musulmanas (batalla de Valdejunquera). Estas sin embargo, no persiguieron i los vencidos, sino que tomaron el camino de Francia, y ORDONO II, reuniendo los restos dispersos de su ejército, entró por la Mancha y devastó todas las poblaciones musulmanas que encontró a su paso, cogiendo abundante botkn y buen nsmero de prisioneros. De regreso en León, pidió explieaciones i los condes castellanos y les invitó i celebrar una entrevista en Tejares, a orillas del Carrión para sincerarse de su conducta. Acudieron cuatro de los citados, que eran Almondar, llamado el "Blanco" su hijo Diego, Fernin Anssrez y Nuno Fernindez, y acto continuo fueron cargados de cadenas y llevados a León, donde poco después recibieron la muerte. En 923 pasó de nuevo con sus huestes i Navarra llamado por el rey, siendo este el sltimo hecho de armas que de él se conoce. ORDONO II embelleció i León, capital con suntuosos edificios, construyendo entre otros, una catedral (916), en la que fué enterrado. Habka casado en primeras nupcias con Elvira, en segundas con Aragonta, y en terceras con Sancha, hermana de Garcka, rey de Navarra. No tuvo sucesión mis que de la primera, que le dió cuatro hijos, Ordono, Sancho, Alfonso, Ramiro y Garcla, y una hija, Jimena. Le sucedió, por elección, su hermano Fruela II.

ENCICLOPEDIA ESPASA

Ordono II (c.871-924), rey de León (914-924). Hijo del rey de Asturias Alfonso III (866-910) y de Jimena, accedió al trono leonés tras la muerte de su hermano Garcka I (910-914), uniendo a los territorios leoneses los de Galicia. Durante su reinado, el califa Abd al-Rahman III (912-961) envió sucesivas expediciones contra los cristianos, que devastaron varias comarcas leonesas y lograron la ocupación de Osma, Gormaz y Calahorra. Una de las batallas mis significativas fue la de Valdejunquera (920), donde el rey leonés, aliado con el monarca navarro Sancho Garcés I (905-925), fue derrotado. A pesar de estos fracasos consiguió ocupar La Rioja y llegar hasta Atienza. Bajo su reinado ya se evidenciaron algunos skntomas del particularismo de los castellanos, lo que provocó la decisión del rey leonés de encarcelar a algunos condes de Castilla.

Navarre,

The old kingdom of Navarre encompassed the modern autonomous community and extended north into the modern French département of Basses-Pyrénées. It was known as the kingdom of Pamplona until the last half of the 12th century. The city of Pamplona, the capital of present-day Navarre, was occupied by the Muslims after 711, but the Basque magnates of the region early achieved some autonomy, and about the year 798 one of them, Inigo Arista, established himself as an independent ruler there and for a time accepted Frankish suzerainty.

By the time of GARCIA INIGUEZ (c. 860-880), this dynasty was strong enough to assume regal titles and to establish diplomatic and dynastic ties with the neighbouring Christian kingdom of Asturias.

Under Sancho I Garcés (905-925), the rulers of Pamplona expanded their dominions south of the Ebro River, capturing Najera and much of La Rioja.

Under Sancho III Garcés (1000-35), the Navarrese established a brief hegemony over all of Christian Spain. Sancho's empire proved short-lived, however, for at his death the kingdom was divided up into Navarre, Aragon, and Castile. In 1076 Sancho Ramkrez of Aragon occupied Pamplona. Navarre was then ruled by the Aragonese crown until 1134, when it recovered its independence under Garcia IV, who reigned until 1150. A succession of French dynasties ruled Navarre after 1234.

Though Navarre at an early date ceased to have a frontier with the Muslims, many Muslims continued to live there. They were allowed to serve in the army and also provided an important source of skilled artisans. Large Jewish

congregations (aljamas) existed in the chief towns and were protected by the Navarrese kings when persecution became serious elsewhere. Despite its small size in the later Middle Ages, Navarre played an important part in international politics, partly because it controlled the main pass into Spain in the western Pyrenees and was a buffer state between Gascony, Castile, and Aragon. The chief pilgrim roads from the north to Santiago de Compostela also traversed the kingdom.

García II Sanchez (926-970) Hijo de Sancho Garcés y Toda, quien ejerció la regencia durante su minoría. Casó con Adregoto. madre de Sancho Garcés y a la que repudió más tarde. Volvió a casarse con Teresa de León, de quien nació Ramiro Garcés.

García I (or II) Sanchez (b. 919/921--d. 970), king of Pamplona (Navarre) from 925 to 970, son of Sancho I Garcés and Queen Toda Aznar. He owed his throne to the support of his cousin 'Abd ar-Rahman III, the Umayyad caliph of Cordoba.(1) The end of his reign was taken up with wars against the count of Castile, Fernán González. Sancho I of Leon, deposed by the Castilian, took refuge in Navarre;
García took to the field and in 960 managed to capture the famous Castilian, holding him prisoner for many years. García was succeeded by his son, Sancho II Garcés.

Notes for Ramiro II (Rey de León y Asturias):
Ramiro II Rey de León y Asturias (? - 950). Subió al trono en 930 al abdicar Alfonso IV. Derrotó a Abderramin III en 933 y en 939. Logró tomar Tormes. Controló a los castellanos. Su muerte implicó el inicio de una época de desórdenes y de guerras civiles.

Ramiro II

(d. 951, León, Leon), king of Leon and Asturias in Christian Spain from 931 to 951, an exceptional general who scored several major victories (e.g., the Battle of Simancas, 939) over the caliphate of Córdoba in Muslim Spain. The second son of King Ordono II, he became king on the abdication of his elder brother, Alfonso IV. In 944 he negotiated a five-year truce with the caliph 'Abd ar-Rahman III. He failed, however, to suppress the Castilian separatist movement led by
Fernin Gonzilez, the first count of unified Castile, a region that came to ominate Spain militarily, politically, and linguistically.

El solar de los Mosqueras es en Orense. Derkvase el apellido de Moscoso, solar de los mis antiguos de Galicia, que proceden de Dorico, prkncipe de Moscovia que fue en auxilio de Ramiro II de León, con una de cuyas hijas, Ingaluisa, casó y después de una batalla volvió ensangrentado. "Mosquera trae mi yerno", dkjoles el rey a quienes lo acompanaban, cuando se le presentó Dorico, a quien rodeaban las moscas a causa de la sangre vertida; y el mismo Ramiro, al propio yerno, "Qué moscoso venks", le expuso, de donde surgieron los dos apellidos. De la casa de los Moscosos fueron cabeza los condes de Altamira, después marqueses de Astorga. La valentka de los de acendientes de Dorico llegó a ser tradicional, a tal punto que se convirtió en refrin de los

gallegos: Seixa Mosquera y seixa quien quiera. De este solar salió Vasco Mosquera, casado con Marka Bazin, padres de Juan que casó en Milaga con Sebastiana López de Toledo Martkn y Pedrosa, hija de Antonio López de Toledo y Marka Martkn de la Plata. De Juan y Sebastiana fueron hijos Juan, casado con Iseo de Esquivel, y Galaor, casado con Isabel de Paramonte, muerto en la isla de Santo Domingo y padre de Marka Mosquera, mujer de Luis Colón, duque de Veraguas y la Vega, marqués de Jamaica y adelantado de las Indias, en quien acabó la sucesión de Colon.

Notes for Ortiga de Gaya (o Moura Ortiga):

ASCENDENCIA ARABE

La genealogka espanola menciona entronques irabes en muy contados casos. Asn ask, el caso mas conocido, el de Mudarra Gonzilez de Lara, es una falsificación. La princesa Zaida de Sevilla (bautizada Isabel), una de las mujeres de Alfonso VI era de noble y auténtico origen irabe, pero no parece que haya quedado descendencia suya (Fernindez de Bethéncourt, I, 518-519).

Muy otro es el caso de Ortega de Gaya, mujer o amante de Ramiro II de León, ya que tiene el aval, nada menos que de Salazar y Castro. Habla éste, en efecto, del monarca y senala: "También se lee en el Nobiliario del Conde Don Pedro de Portugal, que este Prkncipe casó legitimamente con Dona Ortiga, senora de gran calidad, entre los moros y que fueron sus hijos el Infante D. Alboacar Ramkrez y Dona Ortiga Ramkrez". Y anade: "Tenemos por cierto, que él no se llamó Alboazar, y que es aquel Audonio, que en el Privilegio, concedido por el Rey Don Ramiro al Monasterio de Lorban de las dos partes de la Villa de Albalat. Era novecientos y ochenta y uno. subscribe: Audonio, Serenksimo Prkncipe, confirmo este voto de nuestro piadoso padre" (La Casa de Silva I 52, 53)

El conde don Pedro narra que "Oyó hablar al rey Ramiro II de la hermosura y bondades una mora de alta sangre, hermana de Alboazar Abocadem, é hija de don Eadam Eada, bisnieto del rey Alboali. el que conquistó la tierra en tiempo del rey Rodrigo. Este Alboazar era senor de toda la tierra desde (Saya hasta Santarem" (181)- La historia de las relaciones entre el rey, su esposa, Alboazar y Ortega es extremadamente colorida y romancesca. Menéndez y Pelayo la trata de "pintoresca leyenda" (II, 63) aunque es de presumir que se refiere a las alternativas y no al entronque en sk, ajeno a sus inquietudes. Por su parte, Fernindez de Bethencourt coincide en que "toda la narración de los amores del monarca con esta Princesa mora es pura ficción y novela"- Por el contrario, aunque de mala gana, reconoce el entronque ya que "La singular autoridad de don Luis Salazar y Castro, en alguna de sus obras sltimas, prescindiendo como se debe, de las circunstancias extranas y nada admisibles con que cuenta su matrimonio el Nobiliario del Conde don Pedro, acepta la existencia de la Princesa dona Ortiga, de grandksima calidad entre los moros y la hace hija de Zadam Zada, senor de Gaya y nieta del rey Abohalk" (I, 265).

La descendencia de dona Ortiga puede seguirse por la lknea de su hijo Audonio, en la Casa de Aturias-León, rama de Maya VIIIb. En cuanto a su ascendencia parece claramente establecida a través de los datos del conde don Pedro. Sobre esta base, Turton identifica a Aboali con Abdalaziz, segundo virrey de Espana (714-716), esposo de dona Egilona, viuda del Rey Rodrigo, asesinado en un motkn (p. 44), siguiendo, al parecer, la opinión de A Pereyra de Vera en su edición del Nobiliario de 1640.

Abd al-aziz (o Abohalk) era hijo de Musa, el conquistador del norte de Africa y primer Virrey de Espana, tras la conquista de Tirik (713-714). Era hijo de Nosair, hijo de Abd al Rahman, hijo de Zaid y esto es cuanto se sabe de concreto. Su origen tribal dentro del esquema genealógico de los grupos irabes no esti claro. En general se lo considera como yemenita, de la tribu de Lakhm del grupo sureno de la penknsula, no descendiente de Ismael. La tribu de Lakhm fue muy ilustre en la historia preislimica, como tronco de los reyes de Hira y luego, de ella salieron los reyes de Sevilla, (inclukda la citada Zaida). En el campo de la leyenda se dice que fue un Lakhmida quién sacó a José del pozo en que lo habkan encerrado sus hermanos (Levi-Proveneal, III, 739)

Con menos probabilidad se ha dicho también que Muza serka de la tribu de Bekr (Levi-Proveneal, id.) o de la tribu de Kureisch, la misma de Mahoma (Salmon, III, 161-162)

Notes for William I, 2Nd Duke Of Normandy:
William I, also called WILLIAM LONGSWORD, French GUILLAUME LONGUE-ÉPÉE (d. Dec. 17, 942, Picardy [France]), son of Rollo and second duke of Normandy (927-942). He sought continually to expand his territories either by conquest or by exacting new lands from the French king for the price of homage. In 939 he allied himself with Hugh the Great in the revolt against King Louis IV; through the mediation of the pope, the war ended, and Louis renewed William's
investiture of Normandy (940). William, however, continued his territorial ambitions, especially northward. Drawn to a conference on an island in the Somme River, he was assassinated on the orders of the count of Flanders, Arnulf I.

Notes for Otón I El Grande (Emperador Romano Germinico):
Otto I, byname OTTO THE GREAT, German OTTO DER GROSSE (b. Nov. 23, 912--d. May 7, 973, Memleben, Thuringia), duke of Saxony (as Otto II, 936-961), German king (from 936), and Holy Roman emperor (962-973), who consolidated the German Reich by his suppression of rebellious vassals and his decisive victory over the Hungarians. His use of the church as a stabilizing influence created a secure empire and stimulated a cultural renaissance.

EARLY YEARS

Otto was the son of the future king Henry I, of the Liudolfing, or Saxon, dynasty, and his second wife, Matilda. Little is known of his early years, but he probably shared in some of his father's campaigns. He married Edith, daughter of the English king Edward the Elder, in 930; she obtained as her dowry the flourishing town of Magdeburg. Nominated by Henry as his successor, Otto was elected king by the German dukes at Aachen on Aug. 7, 936, a month after Henry's death, and crowned by the archbishops of Mainz and Cologne.

While Henry I had controlled his vassal dukes only with difficulty, the new king firmly asserted his suzerainty over them. This led immediately to war, especially with Eberhard of Franconia and his namesake, Eberhard of Bavaria, who were joined by discontented Saxon nobles under the leadership of Otto's half-brother Thankmar. Thankmar was defeated and killed, the Franconian Eberhard submitted to the King, and Eberhard of Bavaria was deposed and outlawed. In 939, however, Otto's younger brother Henry revolted; he was joined by Eberhard of Franconia and by Giselbert of Lotharingia and supported by the French king Louis IV. Otto was again victorious: Eberhard fell in battle, Giselbert was drowned in flight, and Henry submitted to his brother. Nevertheless, in 941 Henry joined a conspiracy to murder the King. This was discovered in time, and, whereas the other conspirators were punished, Henry was again forgiven.
Thenceforward he remained faithful to his brother and, in 947, was given the dukedom of Bavaria. The other German dukedoms were likewise bestowed on relatives of Otto.

FOREIGN CONQUESTS

Despite these internal difficulties, Otto found time to strengthen and to extend the frontiers of the kingdom. In the east the margraves Gero and Hermann Billung were successful against the Slavs, and their gains were consolidated by

the founding of the Monastery of St. Maurice in Magdeburg, in 937, and of two bishoprics, in 948. In the north, three bishoprics (followed in 968 by a fourth) were founded to extend the Christian mission in Denmark. Otto's first campaign in Bohemia was, however, a failure, and it was not until 950 that the Bohemian prince Boleslav I was forced to submit and to pay tribute.

Having thus strengthened his own position, Otto could not only resist France's claims to Lorraine (Lotharingia) but also act as mediator in France's internal troubles. Similarly, he extended his influence into Burgundy. Moreover, when the Burgundian princess Adelaide, the widowed queen of Italy whom the margrave Berengar of Ivrea had taken prisoner, appealed to him for help, Otto marched into Italy in 951, assumed the title of king of the Lombards, and married Adelaide himself, his first wife having died in 946. In 952 Berengar did homage to him as
his vassal for the kingdom of Italy.

Otto had to break off his first Italian campaign because of a revolt in Germany, where Liudolf, his son by Edith, had risen against him with the aid of several magnates. Otto found himself compelled to withdraw to Saxony; but the position of the rebels began to deteriorate when the Magyars invaded Germany in 954, for the rebels could now be accused of complicity with the enemies of the Reich. After prolonged fighting, Liudolf had to submit in 955. This made it possible for Otto to defeat the Magyars decisively in the Battle of the Lechfeld, near Augsburg, in August 955; they never invaded Germany again. In the same year Otto and the margrave Gero also won a victory over the Slavs. A further series of campaigns led, by 960, to the subjection of the Slavs between the middle Elbe and the middle Oder. The archbishopric of Magdeburg was founded in 968 with three suffragan bishoprics. Even Mieszko of Poland paid tribute to the German king.

## CORONATION AS EMPEROR

In May 961 Otto procured the election and coronation of the six-year-old Otto II, his elder son by Adelaide, as German king. Then he went for a second time to Italy on the appeal of Pope John XII, who was hard pressed by Berengar of Ivrea. Arriving in Rome on Feb. 2, 962, Otto was crowned emperor, and 11 days later a treaty, known as the Privilegium Ottonianum, was concluded, to regulate relations between emperor and pope. This confirmed and extended the temporal power of the papacy, but it is a matter of controversy whether the proviso enabling the emperor to ratify papal elections was included in the original version of the treaty or added in December 963, when Otto deposed John XII for treating with Berengar and set up Leo VIII as pope. Berengar was captured and taken to Germany, and in 964 a revolt of the Romans against Leo VIII was suppressed.

When Leo VIII died in 965, the Emperor chose John XIII for pope, but John was expelled by the Romans. Otto, therefore, marched for a third time to Italy, where he stayed from 966 to 972. He subdued Rome and even advanced into the Byzantine south of Italy. Prolonged negotiations with Byzantium resulted in the marriage of Otto II to the Byzantine princess Theophano, in 972. Having

returned to Germany, the Emperor held a great assembly of his court at Quedlinburg on March 23, 973. He died in Memleben several weeks later and was buried in
Magdeburg at the side of his first wife.

Assessment.

Otto I's achievement rests mainly on his consolidation of the Reich. He deliberately made use of the bishops to strengthen his rule and thus created that "Ottonian church system of the Reich" that was to provide a stable and long-lasting framework for Germany. By his victorious campaigns, he gave Germany peace and security from foreign attack, and the preeminent position that he won as ruler gave him a sort of hegemony in Europe. His Italian policy and the acquisition of the imperial crown constituted a link with the old Carolingian tradition and was to prove a great responsibility for the German people in the future. All areas under Otto's rule prospered, and the resultant flowering of culture has been called the Ottonian renaissance.

Children of Otón (Emperador Romano Germinico) and Edith Of The Francs are:

i. Otón II (Emperador Romano Germánico), born 955; died 983 in Roma; married Teófano (Pincesa Bizantina) 972; born Abt. 955.

Notes for Otón II (Emperador Romano Germánico):
Otón II. 955-983. Emperador del Sacro Imperio Romano-Germanico.
Hijo de Otón I. Emperador de 973 a 983. Fue derrotado por los sarracenos, pero logró sacar a los franceses de la Lorena.
Esposo Teófano, hija del emperador de Bizancio Romano II, la cual influyó mucho sobre el estilo de la Corte.

Otto II (b. 955--d. Dec. 7, 983, Rome), German king from 961 and Holy Roman emperor from 967, sole ruler from 973, son of Otto I and his second wife, Adelaide.

Otto continued his father's policies of promoting a strong monarchy in Germany and of extending the influence of his house in Italy. In 961 he was crowned co-regent king of Italy and Germany with his father and was made co-regent emperor in 967. On April 14, 972, he married the Byzantine princess Theophano. At his father's death in 973 he was accepted without opposition as successor,
although revolts in the duchy of Bavaria and in Lorraine occupied the early years of his reign.
Bavaria, the most independent of the duchies, rebelled in 974, under the leadership of its duke, Henry II the Quarrelsome, Otto's cousin. It was not until 978 that Bavaria was pacified, the same year that Lothair, king of France, invaded Lorraine. In 979 Otto received the submission of Bohemia and Poland, and in 980

Lothair renounced his claim to Lorraine. Having thus secured his German dominions, Otto marched into Italy in 980, where German rule had been maintained by an imperial party headed by Hugh, marquis of Tuscany. Otto invaded southern Italy and was decisively defeated there by the Arabs in 982. In 983 he summoned a diet at Verona, where his young son, Otto III, was crowned German king. Otto II died in 983 while attempting to bring Venice under imperial
control. His absence from Germany had occasioned revolts along its borders, and after his defeat in Calabria in 982 the German position east of the Elbe collapsed because of a revolt by the Danes and an invasion by the Slavs. Nonetheless, Otto left a firmly established realm to his son and successor
Otto III.

BRITANICA

Otto II (955-83), Holy Roman emperor (967-83), king of Germany (961-83), the son of Otto I, with whom he ruled jointly from 967 to 973. In 976 he suppressed a rebellion that was led by his cousin Henry II, duke of Bavaria. Two years later, having been attacked by Lothair, king of France, Otto drove the French out of Lorraine but was unsuccessful in besieging Paris. Later Lothair renounced Lorraine, and peace was established. Otto next invaded southern Italy, gaining possession of Naples, Salerno, and Taranto, but he was overwhelmingly defeated by the Greeks and Saracens at Crotona in 982. He died in Rome while planning a second invasion. His wife, Theophano, brought Byzantine refinement and culture to the German court.

Esta alianza se fundaba en que de un lado este matrimonio habka sido impuesto por Ramiro II como condicion de la libertad del conde al que habka hecho prisionero; y de otro, en que Sancho era hijo de Urraca, segunda mujer de Ramiro, hija de Teuda, reina madre de Navarra; y de ésta era tamblén hija la esposa de Fernin Gonziloz, de modo quo Sancho resultaba nieto de Teuda, sobrina de Garcka de Navarra y sobrino polktico del conde de Castilla, habiendo ademis prometido a éste devolverle los bienes de que le desposeyera Ramiro II. En 933 los aliados se dirigieron contra León pero ante las dificultades de la empresa retrocedieron sin haber entablado ningsn combate. ORDONO III, para vengarse de la deslealtad de su suegro repudió i Urraca y casó con Elvira ó Gelvira, hija del conde de Asturias. Al poco tiempo hubo de sortear otra rebelión en Galicia. desde donde se trasladó i Lusitania, emprendiendo una vigorosa campana contra los moros y apoderindose de Lisboa que saqueó. Posteriormente hizo las paces con su suegro y juntos guerrearon y vencieron a los moros, que habian ponetrado en Castilla. Murió cuando se preparaba a emprender otra campana contra los moros, y fue enterrado en la iglesia de San Salvador de León. Le sucedió su hermano Saneho.

ENCICLOPEDIA ESPASA

Ordono III (fallecido en el 956), rey de León (951-956). Hijo y sucesor de Ramiro II (931-951), se enfrentó a navarros y castellanos que apoyaban a su hermanastro Sancho, en su intento por acceder al trono leonés (953). Su gobierno estuvo presidido por los conflictos en la sucesión al trono, las rebeldkas internas, los ataques procedentes de al-Andalus y una sublevación en Galicia. En respuesta a las incursiones musulmanas, Ordono III envió una gran expedición que llegó hasta Lisboa (955). Después de esta demostración de fuerza se iniciaron las negociaciones para firmar la paz con el califa Abd al-Rahman III (912-961). En el interior, el rey leonés llevó a cabo una cuidada reorganización del territorio y continuó con la obra, ya iniciada por su padre, de fortalecimiento de las instituciones del reino.

Notes for Hugh, D. Of France & Burgundy:
Hugh THE GREAT, also called HUGH THE WHITE, French HUGUES LE GRAND, or HUGUES LE BLANC (d. June 16/17, 956), duke of the Franks, count of Paris, and progenitor of the Capetian kings of France. He was the most powerful man in the kingdom of France (West Francia) during the reign of Louis IV d'Outremer and the early years of King Lothair.

Son of a king (Robert I), father of another (Hugh Capet), and brother-in-law of three more (Rudolf of France, Athelstan of England, and Otto of Germany), Hugh possessed such vast territories that he could easily have assumed the crown on the death of Rudolf in 936. Preferring to work from behind the throne, he instead suggested the accession of Louis IV, son of the deposed Charles III the Simple. Louis proved no puppet, however, and his reign saw an almost constant struggle between King and Duke in which all the great magnates of France, Otto I of Germany, and the dukes of Lorraine were at one time or another involved. In 945 Louis fell into Hugh's hands and was incarcerated for a year before pressure from abroad and public opinion at home brought his release. Excommunicated by French and German councils and by the Pope, Hugh finally submitted to Louis
in 951.

On the death of the King three years later, Hugh again turned down the opportunity to become king, plumping instead for Louis's young son, Lothair; but for his last two years Hugh was effectively the ruler of France.

Notes for II Fulk, Count Of Anjou:
Under Fulk II the Good, the destruction caused by the preceding wars was repaired. Geoffrey I Grisegonelle, who succeeded Fulk II in about 960, began the policy of expansion that was tocharacterize this first feudal dynasty. He helped Hugh Capet to seize the French crown but died some months after the new king's accession (987).

Notes for Sunyer (Conde de Barcelona):
Suniario o Sunyer, Conde de Barcelona de 914 a 947, hermano y sucesor de Wilfredo II. Parece ser que a la muerte de su padre Wilfredo I el Belloso heredó el condado de Besals, y, habiendo muerto su hermano Wilfredo II, le sucedió en el condado de Barcelona, donde gobernó durante cuarenta anos. Extendió sus dominios por el Panadés y edificó el castillo de Olérdona en el ano 929. Habiendo dejado sus estados a sus hijos (Borrell y Mirón), habidos con la condesa Riquildes, se retiró a un monasterio (947), donde murió en 954; pero hasta esa fecha continuó gobernando como regente.

Algunos autores confundieron a este conde con su hermano Sunifredo (conde de Urgel) e hicieron con los dos un solo personaje; pero esto fue aclarado por Próspero Bofarull.

Notes for II Aethelred, King Of Eng(979-1016):
Ethelred II, also spelled AETHELRED, byname ETHELRED THE UNREADY, or AETHELRED UNRAED (b. 968?--d. April 23, 1016, London), king of the English from 978 to 1013 and from 1014 to 1016. He was an ineffectual ruler who failed to prevent the Danes from overrunning England. The epithet "unready" is derived from unraed, meaning "evil counsel."

The son of King Edgar (ruled 959-975), Ethelred ascended the throne upon the assassination of his half brother King Edward the Martyr in March 978. Widespread suspicion that Ethelred may have had a part in the murder created much of the distrust and disloyalty that undermined his authority. Hence, there was no unified defense when the Danish invasions resumed in 980.

Nearly all of the country was ravaged, and Ethelred's efforts to buy peace only made the invaders more rapacious. When they did begin to settle down in towns, Ethelred provoked further invasions by launching a massacre of Danish settlers (Nov. 13, 1002). By the end of 1013 the Danish king Sweyn I had been accepted as king in England, and Ethelred had fled to Normandy.

After Sweyn died in February 1014, Ethelred's council of advisers invited him to return to the throne on condition that he agree to satisfy their grievances. At the time of Ethelred's death in 1016, Sweyn's son Canute was ravaging England. Ethelred was succeeded by his son Edmund II Ironside (ruled 1016); one of his other sons ruled England as Edward the Confessor from 1042 to 1066.

**10490044. Boleslao I El Grande (Rey de Polonia),** born Bet. 966 - 967; died 17 Junio 1025. He was the son of **20980088. Mieszko I Prince Of Poland** and **20980089. Dubravka Princess Of Bohemia**.

Notes for Boleslao I El Grande (Rey de Polonia):
Boleslaw I, byname BOLESLAW THE BRAVE, Polish BOLESLAW CHROBRY (b. 966/967--d. June 17, 1025), duke (from 992) and then (from 1024) first king of Poland, who expanded his country's territory to include Pomerania, Lusatia, and, for a time, the Bohemian princely lands and made Poland a major European state. He also created a Polish church independent of German control.

Son of Mieszko I, the first of the Piast dukes, and the Bohemian princess Dobrawa (Dubravka), Boleslaw I inherited the principality of Great Poland (Wielkopolska, between the Oder and the Warta rivers) upon his father's death (992). He conquered Pomerania (on the Baltic Sea) in 996 and seized Kraków (formerly a Bohemian possession) soon afterward. He ransomed the relics of the
martyred St. Adalbert, bishop of Prague, from the pagan Prussians and buried the relics at Gniezno. The Holy Roman emperor Otto III, who had been Adalbert's student and Boleslaw's ally since 992, attended the ceremony (March 1000) and marked the occasion by personally crowning Boleslaw king of Poland. With Pope Sylvester II's approval, the emperor granted Poland its own archdiocese, with Gniezno as its seat. Boleslaw then reorganized Poland's church structure,
making it a national church directly under papal jurisdiction and independent of German ecclesiastical control.

After Emperor Otto III's death (1002), Boleslaw seized the imperial lands of Lusatia and Misnia (Meissen) and the principality of Bohemia. These actions started a series of three wars between him and the German king Henry II; it lasted until 1018, when, by the Treaty of Bautzen, Boleslaw retained Lusatia and Misnia and Henry II won Bohemia. Boleslaw's expansionist policy continued.
When he defeated Grand Prince Yaroslav I the Wise of Kiev in battle (July 21, 1018) and placed his own son-in-law (and Yaroslav's brother), Svyatopolk, on the Kievan throne, his control extended from the western tributaries of the middle Elbe to the eastern reach of the Western Bug River. Though recognized as king by Otto III in 1000, Boleslaw sought to strengthen his position and his independence from imperial control by being crowned again by the archbishop of Gniezno (Dec. 25, 1024).

BRITANICA

Boleslaw I, called The Brave or The Mighty (circa 966-1025), first king of Poland. In 992 he succeeded his father Mieszko as prince of Poland and embarked on a vigorous program of expansion, beginning by declaring his country's independence of the Holy Roman Empire. In the west he conquered Lusatia and Meissen, and in 1003 he forced Bohemia to acknowledge him as its prince. Later losing these territories to the German king Henry II, he finally

regained them by the Treaty of Bautzen (1018). In the same year, he invaded the Russian state of Kyyiv, giving its throne to his son-in-law Svyatopolk. Boleslaw continued his father's support of Christianity and made the Polish church independent under the papacy, establishing Gniezno as an archbishopric. Crowned king in the year of his death, he left Poland one of the strongest states in Europe.

Notes for II Vladimir, Of Kief:
Vladimir II Monomakh, in full VLADIMIR VSEVOLODOVICH MONOMAKH (b. 1053--d. May 19, 1125, near Kiev [now in Ukraine]), grand prince of Kiev from 1113 to 1125.

Vladimir was the son of Grand Prince Vsevolod I Yaroslavich (ruled Kiev 1078-93) and Irina, the daughter of the Byzantine emperor Constantine IX Monomachus. He became active in the politics of Kievan Rus, helping his father and uncle Izyaslav I (ruled at Kiev intermittently 1054-78) defeat his cousins Oleg Svyatoslavich and Boris Vyacheslavich at Chernigov (1078; modern Chernihiv, Ukraine) and succeeding his father as prince of Chernigov when Vsevolod became grand prince of Kiev. Vladimir ruled Chernigov from 1078 to 1094, restoring order among his cousins in Volhynia (1084-86) and assuming a leading role among princes of Rus at the conferences held to avert perpetual warfare among themselves (1097 and 1100). When his cousin Grand Prince

Svyatopolk II (ruled Kiev 1093-1113) died, the veche (city council) of Kiev named him successor.

During his reign, as prior to it, Vladimir was almost constantly involved in wars, fighting primarily the Polovtsy, who had settled in the steppe region southeast of the Kievan state and had been raiding the lands of Rus since 1061. In his "Testament," which he wrote for his sons and which constitutes the earliest known example of Old Russian literature written by a layman, Vladimir recounted participating in 83 noteworthy military campaigns and recorded killing 200 Polovtsy princes. In addition to his martial qualities, Vladimir Monomakh was known as an adept administrator, whose ability to curtail the internecine warfare among his princely relatives revived, if only temporarily, the declining strength of Kievan Rus. He was also noted as a builder; he founded the city of Vladimir on the Klyazma River in northeastern Russia, which by the end of the 12th
century replaced Kiev as the seat of the grand prince.

Notes for RobertoGuiscardo, duque de Apulia y Calabria:
Robert, byname ROBERT GUISCARD, or ROBERT DE HAUTEVILLE, Italian ROBERTO GUISCARDO, or ROBERTO D'ALTAVILLA (b. c. 1015, Normandy [France]--d. July 17, 1085, near Cephalonia, Greece, Byzantine Empire), Norman adventurer who settled in Apulia, in southern Italy, about 1047 and became duke of Apulia (1059). He eventually extended Norman rule over Naples, Calabria, and Sicily and laid the foundations of the Kingdom of Sicily.

Arrival in Apulia

Robert was born into a family of knights. Arriving in Apulia, in southern Italy, around 1047 to join his half brother Drogo, he found that it and Campania, though they were southern Italy's most flourishing regions, were plagued by political disturbances. These regions attracted hordes of fortune-seeking Norman immigrants, who were to transform the political role of both regions in the
following decades.

In Campania, the Lombards of Capua were launching wars against the Byzantine dukes of Naples in order to gain possession of that important

seaport. In Apulia, William ("Iron Arm") de Hauteville, Robert's eldest half brother, having successfully defeated the Byzantine Greeks who controlled that region, had been elected count of Apulia in 1042. In 1046 he had been succeeded by his brother Drogo.

When Robert joined his brothers, they sent him to Calabria to attack Byzantine territory. He began his campaign by pillaging the countryside and ransoming its people. In 1053, at the head of the combined forces of Normans from Apulia and Campania, he defeated the haphazardly led forces of the Byzantines, the Lombards, and the papacy at Civitate. Because of the deaths of William and Drogo and of his third half brother, Count Humphrey, in 1057, Robert returned to Apulia to seize control from Humphrey's sons and save the region from disgregating internal conflicts. After becoming the recognized leader of the Apulian Normans, Robert resumed his campaign in Calabria. His brother Roger's arrival from Normandy enabled him to extend and solidify his conquests in Apulia.

In his progression from gang leader to commander of mercenary troops to conqueror, Robert emerged as a shrewd and perspicacious political figure. In 1059 he entered into a concordat at Melfi with Pope Nicholas II. Until that time the papacy had been hostile toward the Normans, considering them to be an anarchist force that upset the political structure in southern Italy--a structure based on a balance of power between the Byzantines and the Lombards of northern Italy. The schism that took place between the Greek and Latin churches in 1054 worsened the relations between the Byzantine emperors and the papacy, and eventually the papacy realized that Norman conquests over the Byzantines could work to its advantage. Robert's plan to expel the Arabs from Sicily and restore Christianity to the island also found favour in Nicholas' eyes. This expedition into Sicily got under way in 1060, as soon as the conquest of Calabria was completed. Robert entrusted the command of the expedition to his brother Roger, but on particularly difficult occasions--e.g., the siege of Palermo in 1071--he came to his brother's aid.

Until this time, Robert's relations with Roger had not always been amicable, since Roger, aware of both his own talent and Robert's dependency on him, would not settle for the subordinate role allotted him. Their differences were resolved when Robert invested Roger, after he had recognized Robert's supreme authority, with "the County of Sicily and Calabria" along with the right to govern and tax both counties.

Expansion of the Duchy

Robert continued to expand the small county left by Humphrey into a duchy, extending from the Adriatic to the Tyrrhenian sea. The capture of Bari in April 1071 resulted in the end of Byzantine rule in southern Italy. Robert turned next to the neighbouring territories of Salerno, controlled by the Lombards. Instead of fighting them, he dissolved his first marriage and in 1058 married the sister of Salerno's last Lombard prince, Gisulf II. Hostilities broke out between the two rulers, however, and Gisulf naively tried to bring about a Byzantine counteroffensive against Robert. Fearing that the Norman advances into

Campania, Molise, and Abruzzi would threaten the papal dominions, Pope Gregory VII excommunicated Robert and gave Gisulf considerable military aid. The struggle came to a head when Gisulf, determined to display his power, advanced toward the prosperous city of Amalfi. Robert responded to the city's plea for help in 1073 and successfully defended it; in December 1076 he took Salerno from Gisulf and made it the capital of his duchy.

Robert was now at the height of his power. During his rise he repressed with an iron hand not only the claims of Humphrey's sons but also the uprisings of towns and lords that were fretting under the restraints imposed upon them. The harshness with which Robert chose to deal with these rebels was intended to transform a heterogeneous population into a strong, sovereign state.
